

BSR®

商务社会责任国际协会

**2010 OECD CONFERENCE ON  
CORPORATE  
RESPONSIBILITY**

**30 June 2010**

# About BSR

# We work with business to create a just and sustainable world

**We have worked in more than 70 countries from six offices in Asia, Europe, and North America**

San Francisco  
Beijing  
Guangzhou  
Hong Kong  
New York  
Paris

## Languages & Dialects Spoken:

Cantonese	Japanese	Spanish
Dutch	Kannada	Swedish
English	Lao	Tagalog
French	Mandarin	Taiwanese
German	Portuguese	Thai
Guarani	Russian	Urdu
Hindi	Shona	Vietnamese
Italian		

## Member Network: More than 250 BSR member companies

### Sample member companies include:

Alcatel-Lucent

Aramex

AREVA

Cisco

The Coca-Cola Company

COSCO Container Lines Co.

Duke Energy

Ford

GE

IBM

IKEA

Kraft Foods

Levi Strauss & Co.

Li & Fung, Ltd.

Marks & Spencer

McDonald's

Microsoft

Nike

Novartis

Pfizer

Shell

SAP

Sodexo

Sony

Starbucks

Wal-Mart

The Walt Disney Company

Wells Fargo & Company

# BSR Projects look at supply chain issues from several angles

## **Buyer Alignment:**

Dell Scorecard for integrating CSR into procurement, Wal-Mart Energy Efficiency Work

## **Supplier Ownership:**

BSR's China Training Institute (CTI)

## **Government**

## **Engagement:**

Better Work

## **Worker Empowerment:**

HER (Health Enables Returns)

# Corporate tools and practices for managing supply chain risks: *A perspective from China*

Scott Chang  
BSR Beijing

# Why use China as an example?

- Renowned as ‘the world’s manufacturer,’ the application of OECD guidelines will inevitably impact how companies source products from China
- The history and development of CSR in Chinese manufacturing has some interesting lessons for OECD to consider

# 1949-2000: Shifting Ideologies

- Socialist ideal of “companies as society”: a planned economy where companies are simply economic engines that provide for society
- “To get rich is glorious” – Deng Xiaoping

# 2000-2007: The Sweatshop Scare

- **Trend**
  - Series of scandals make buyers wary of factory conditions in China.
- **Impact**
  - **Increased Audits.** Attempts at risk mitigation brings many buyers into the audit game
  - **Gaming the Audit System.** A ‘cottage industry’ of double books and a culture of opposition between buyers and suppliers, developed and developing countries
  - **Political Posturing**
    - Gov’t saw SA8000 and CSR as a de-facto trade barrier (2005)
    - Government taking action to try and control the standards themselves (CSC9000T)
  - **New Trends:** Training and CSR as Soft Competitiveness

# 2008-2010: Changing Domestic Priorities

- **Trends**

- Employing (and protecting) the People – the Labour Contract Law
- Changing worker expectations
- Balancing labor intensive industries and the value add of innovation
- Call to action (politically and commercially) on climate change

- **Impact**

- A more proactive stance on labor issues and environmental protection by business and government
- Increased “public accountability” via the media

“Today, the business philosophy has changed. ... Cost, quality, and availability have become minimum requirements. Business ethics and social responsibility have become the key factors in enhancing competitiveness and sustainable development.”

—Wang Zhongyu, President, China Enterprise Confederation (June 23, 2010)

# Challenge: “trends-oriented” approaches

- Sweatshop scare
- An Audit Era
- Audit Fatigue + Trade Barrier scare
- A Training Era
- Training fatigue
- Politicization and prioritization of climate change
- The Energy Efficiency Era
- ...?

# Potential Learning for OECD

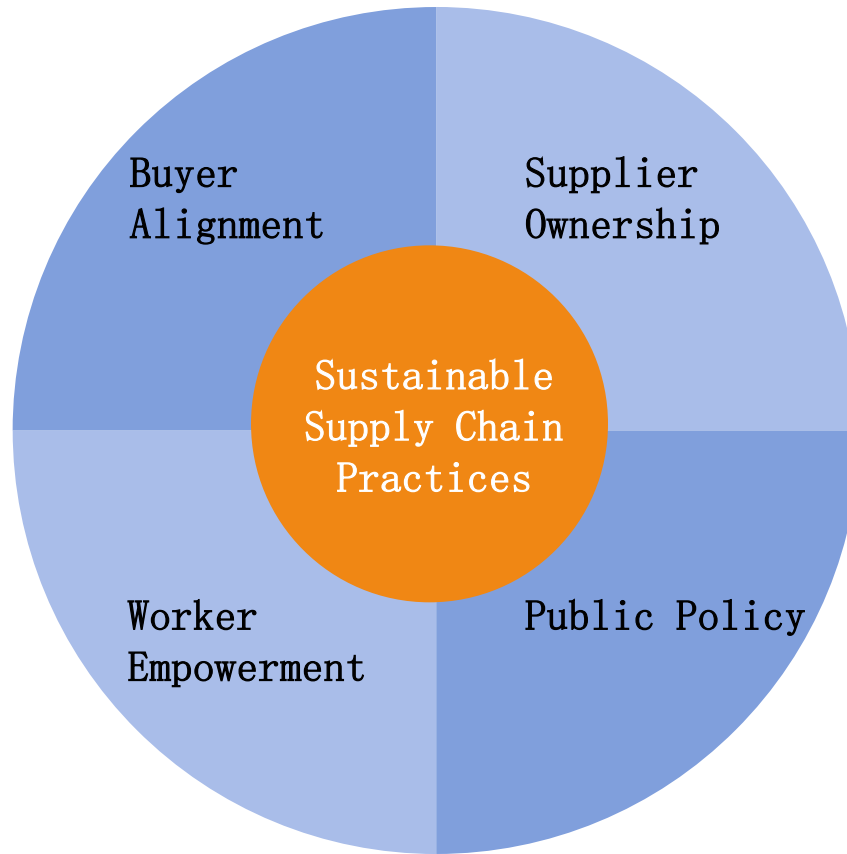

## Observations

- “Force feeding” any standard or approach can easily be misinterpreted or cause an unwanted reaction
- Extremely diverse and complex issues
- Multiple stakeholders create the problem, they should be taken into account thinking when developing the solution
- This isn’t just about one China or any one country – but complex interactions between many countries

## Implications

- A prescriptive single-focused approach may not work
- Embrace complexity
- Think about a set of guidelines that includes many stakeholders
- There is no “silver bullet!”
- ***A comprehensive approach is needed, one that looks at business risk mitigation, value creation, as well as larger societal impacts***

# Companies taking action to manage supply chain risks

# Auditing: a very useful tool when used in a bigger “system”

## Buyer Alignment

example:

### Benefits:

- Great baseline data: No better tool for tracking social and environmental performance at a factory level over time

### Limitations:

- Auditing identifies problems, it does not solve them
- Excessive auditing is inefficient
- Can be an overly prescriptive tool when used alone

### Opportunity:

- Ideally, the OECD Guidelines for MNEs should help companies understand auditing as one tool within a bigger “sourcing system,” a system that creates real incentives and consequences for CSR performance

# Training: invest time to discuss what CSR means on the factory floor

## Supplier ownership

example:

### Benefits:

- Provides suppliers with needed practical guidance on how to implement a code
- Builds peer networks and creates opportunity for regular buyer-supplier engagement

### Limitations:

- Difficult to develop scale-up effective training
- Particularly as some buyers are increasingly “brand managers” and less manufacturing experts, it can be challenging for a buyer to be a “supplier CSR consultant”

### Opportunity:

- OECD Guidelines for MNEs can make companies aware that implementing CSR in global supply chains may mean that they will need to invest in helping their suppliers find practical ways to address challenges

# Challenging ground: engaging in public policy discussion

## Public policy

examples:

### Benefits:

- Government solutions—when they work—can result in long term, systemic solutions
- Could potentially augment existing in-country government relations efforts

### Limitations:

- Government engagement is a time and labor intensive, with limited immediate tangible returns
- Outside of a buyer's home country, direct public policy engagement can be very politically sensitive

### Opportunity:

- OECD Guidelines for MNEs can acknowledge that managing some CSR issues fall well-outside of a company's control, but where it is strategic and safe, corporate contribution to public policy discussion can lead to systematic change that alleviates supply chain risk and creates long term value

# Worker empowerment: directly supporting workers' rights

## Worker empowerment

example:

### Benefits:

- Direct benefit to disadvantaged group
- Empowered workers are arguably the best defense against abusive workplace practices
- Can be a positive way to engage with suppliers: worker programs are something a factory owner could be proud of

### Limitations:

- Unionization is in some instances a sensitive issue for some businesses to advocate
- Effective programs can require a large time investment, a potential strain on limited resources

### Opportunity:

- OECD Guidelines for MNEs should acknowledge that “preventing abuse” is about risk-mitigation, while direct efforts to improve workers' lives is about creating real value

# Complex challenges require multi-dimensional solutions

- In order to promote the adoption of the latest “new solution” in ethical sourcing, we often find ourselves criticizing and discarding previous models and opting for the new one
- This can lead to an oversimplified approach to solving a complex challenge
- Improving CSR in global supply chains is *both* a risk mitigation and value creation exercise; it is a project about worker empowerment *and* improving buying practices
- Addressing these CSR issues in global supply chains will take us in multiple directions to achieve multiple objectives: to treat workers with dignity, to protect natural resources, and to benefit the bottom lines
