1. Until 2011, payment for non-market output are distributed between market output and output for own final use.
2. *Taxes on production and imports, receivable* for general government and central government includes the whole amount of VAT revenues collected in the country. Transfers to the EU institutions based on the harmonised VAT assessment bases after exclusion of UK rebate, are recorded by other Member States directly as VAT revenue of the EU institutions (outside general government sector). For Denmark these transfers increase value of *Other current transfers, payable* for general government and central government.
3. Property income is not consolidated.
4. Transaction *Gross capital formation* and *Acquisitions less disposals of non-produced assets* isn't adjusted for UMTS sales.

1. It should also be noted that so far, no consolidation of flows between Member States is done in aggregating to EU levels. This means in particular that the level of exports and imports for the EU (or euro area) includes flows within the EU (or euro area). The external balance however is not affected, because the non-consolidated flows in exports and imports cancel each other out in the balance.
