Costa Rica

To attain a strong and inclusive recovery top policy priority should be on boosting formal jobs creation, with reforms ranging from removing obstacles to firm entry and competition, to improving the quality of education and training.

Performance prior to the COVID-19 crisis

**Economy**
- GDP per capita is 64% lower than OECD best performers.
- Productivity is 66% lower than OECD best performers.
- Employment rate is low but was increasing before the 2020 crisis.

**Inequality**
- Inequality is higher than in most advanced economies.
- The poorest 20% of households earn 4.2% of total income.

**Environment**
- More than 3/4 of the population is exposed to harmful levels of air pollution.
- Carbon dioxide emissions have been stable in recent years.

---

Economy: Percentage gap with respect to the population-weighted average of the highest 18 OECD countries in terms of GDP per capita (in constant 2015 PPPs).
Inequality: The Gini coefficient for disposable income measures the extent to which the distribution of disposable income among households deviates from perfect equal distribution. A value of zero represents perfect equality and a value of 100 extreme inequality. The latest available data for Costa Rica is 2019.
Environment: A high exposure to air pollution refers to above 10 μg/m³ of PM2.5.

Boosting formal job creation for a strong and inclusive recovery

Informality has already been high before the crisis, especially among women and low-skilled workers, and has now further increased. To make growth more inclusive, a comprehensive strategy to reduce informality is needed. This should include simplifying the minimum wage, gradually shifting part of the tax burden from social security contributions to other taxes (such as property taxes), improving the quality of education and training, and simplifying administrative procedures to lower costs for firm entry and formalisation (Panel A). Administrative burden for firm entry can be reduced by introducing online one-stop mechanisms for licenses and permits and widening the scope of silence-is-consent rules.

Formal job creation relies on a dynamic business environment, but domestic firms lag behind those in free-trade zones in terms of innovation and integration into global value chains. Hence, the business environment needs to improve on several fronts. More competition in the domestic network and service sectors would lower input prices for firms. Competitive and performance-based funding in public research would strengthen cooperation between universities and domestic businesses and foster innovation among SMEs. Centralising public planning procedures for infrastructure projects using cost-benefit analysis could help to improve infrastructure and reduce transport costs for domestic firms.

Low competition in many key sectors, such as banking, food, electricity or transport, leads to higher prices and lower quality of essential goods and services, harming consumers and hindering business dynamics and employment creation. Boosting competition can be achieved by ensuring full and timely implementation of the competition law, phasing out remaining exemptions and ensuring the independence and sufficient resources of the competition authority. Finally, transparent monitoring of the performance of prevalent state-owned enterprises should be established.

Vulnerabilities and areas for reform

The pandemic has exacerbated fiscal vulnerabilities, highlighting the need for raising public spending efficiency. This should include simplifying the system of public employment remuneration and introducing performance-based incentives, centralising public procurement, reducing the duplication of public agencies, and better targeting social spending. In particular, although education spending as a share of GDP is significantly higher than in advanced economies, educational outcomes remain low (Panel B). Dropout rates are high, especially among students from disadvantaged households. Improving the
quality of education requires updating curricula and improving teacher recruitment, selection and training. Rebalancing education spending towards early childhood and secondary education, further increasing affordable childcare and strengthening targeted support for students with higher drop-out risks would improve job opportunities for all students.

Costa Rica: Summary of Going for Growth priorities and recommendations

<table>
<thead>
<tr>
<th>2019-2020 Reforms</th>
<th>Recommendations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Labour market: Reduce barriers to the formalisation of workers and firms</strong></td>
<td></td>
</tr>
<tr>
<td>☑ Single window mechanisms for business registration and licensing are gradually being deployed, but do not cover all permits.</td>
<td>☐ Introduce online one-stop mechanisms and ensure physical ones cover all licences and permits and are present in all major cities. Widen the scope of silent consent rules and remove the administrative requirement to apply for its application.</td>
</tr>
<tr>
<td>☑ Employer and employee’s social security contribution have been lowered for informal companies that become formal (temporary and only for small firms).</td>
<td>☐ Eliminate the requirement for using a notary to register a company. Make the electronic signature mechanism more user-friendly to support online firm registrations.</td>
</tr>
<tr>
<td>☑ The number of different minimum wages has been reduced from 26 to 16, with a medium-term objective to reduce it further to 11, reducing administrative burden.</td>
<td>☐ Establish a comprehensive strategy to reduce informality, including shifting part of the tax burden from social security contributions to property taxes and strengthening enforcement mechanisms.</td>
</tr>
<tr>
<td>☑ Sectoral pilot programmes to reduce informality for domestic workers and some agro activities (coffee) have been deployed and there are plans for including the fishing sector, street vendors and part-time workers.</td>
<td>☑ Further simplify the minimum wage system.</td>
</tr>
</tbody>
</table>

| **Competition and regulation: Promote domestic firms’ participation in global-value chains** | | |
| ☑ A National Committee on Trade Facilitation was created, comprising public and private stakeholders, to improve conditions at borders, ports and airports and to streamline procedures. Joint custom facilities with Panama are being established, and information exchange and coordination for border control activities with Nicaragua are being improved. | ☐ Finance public research based on competitive and performance-based criteria and establish independent evaluation mechanisms. Thereby, improve the coordination between universities and the domestic business sector to support innovation outside the free trade zones. |
| ☑ The fiscal reform of 2018 has simplified the tax system through the introduction of a VAT which has the potential to reduce costs for domestic firms. | ☐ Improve road, rail and port infrastructure, particularly through centralising public planning procedures using cost-benefit analysis. |
| ☑ Reform the electricity sector to improve service quality and reduce prices. Increase the share of private-sector electricity generation, allow private participation in distribution and retail supply and remove barriers to foreign participation. Introduce legal or ownership separation between generation, transmission and retail supply. | ☐ Continue to improve trade facilitation, including by simplifying and harmonising documents, automating and streamlining border procedures, and improving coordination of the relevant national agencies. |
Recent progress on structural reforms

Progress in structural reforms has been very good in recent years, particularly driven by the OECD accession process of Costa Rica. The COVID-19 pandemic has intensified fiscal imbalances leading to heightened political discussions on fiscal policy reforms, including reforms of the public employment scheme, public procurement processes and the organisation of the public sector, which are currently discussed in Congress. In 2020, a range of reform initiatives not included in the reform priorities has been approved. To support household incomes during the crisis, the authorities have introduced a direct cash transfer programme (Bono Proteger), targeted at formal and informal workers who lost their job or faced reduced working hours. In 2019, a fiscal reform was implemented, which introduced a fiscal rule, created a new VAT and two new income brackets in the personal income tax scheme, and reduced revenue earmarking. The independence of the Central Bank and financial market supervision have been strengthened.
