

EDUCATION AT A GLANCE 2014

Education at a Glance: OECD Indicators is the authoritative source for accurate and relevant information on the state of education around the world. It provides data on the structure, finances and performance of the education systems in the 34 OECD member countries, as well as a number of G20 and partner countries.

Austria

Austria's relative spending on individuals' tertiary education is among the highest in the OECD.

Austria puts great emphasis on tertiary education which is reflected in the level of public investment: its spending on individuals' tertiary education relative to lower levels of education is among the highest of the OECD countries. Considering public direct spending and indirect costs, **Austria spends USD 68 000 more per tertiary student than on students at the upper secondary or post-secondary non-tertiary level.** Only Denmark and the Netherlands show a greater difference; across the OECD, the average difference is USD 38 000.¹

Labour market incentives for tertiary education are particularly strong.

Across all OECD countries, greater educational attainment means better chances for the individual in the labour market. On average, over 80% of tertiary-educated people are employed compared with less than 60% of people with below upper secondary education. In Austria, this gap is even larger: **since 2000, employment rates for 25-64 year-olds with tertiary attainment have consistently been more than 30 percentage points more** than for those with below upper secondary attainment.

Enrolment and graduation rates for young Austrians are below OECD averages.

On average, 83% of 15-19 year-olds in OECD countries are enrolled in an education programme, typically at the upper secondary level, or in transition to higher levels of education. However, **Austria's enrolment rates are below average: 79% of young Austrians participate in formal education.** Austria also has **one of the lowest graduation rates** for upper secondary and post-secondary non-tertiary programmes designed to prepare students under 25 for tertiary-type A education (38.9%, ranking 25 of 27).

Literacy skills are unsatisfactory for younger and older adults alike.

While performing above the OECD average in numeracy, Austria has a low share of younger adults (25-34 year-olds) who reached Level 4 or 5 in literacy in the Survey of Adult Skills:² **only 13% of**

¹ For further information on direct and indirect costs see Annex 3, Indicator A7.4b, available only online at: <http://www.oecd.org/edu/eag.htm>.

² The Survey of Adult Skills is a product of the OECD Programme for the International Assessment of Adult Competencies (PIAAC).

Austrians in this age group managed to achieve the necessary scores, compared with an average of 18% across the OECD. The results are similar for older adults: 2% of 55-64 year-olds in Austria scored at the highest proficiency levels, whereas across the OECD the average share is 5%. This is particularly worrying as Austria is one of the countries in which low levels of skills have a significant impact on career chances: **employment rates for individuals scoring at literacy proficiency Level 4 or 5 (89%) are almost 17 percentage points higher than among those scoring at Level 2 (73%).**

Upward mobility in educational attainment is particularly difficult in Austria, especially for women.

The familial background of individuals can have a significant impact on their educational attainment and **in Austria this correlation is particularly strong: only 29% 25-64 year-old non-students have a higher educational attainment than that of their parents.** Austria ranks 21st out of the 23 countries for which data are available on this measure. Unusually, **Austrian men are considerably more upwardly mobile in educational attainment than women** (33% versus 25%), in contrast to the large majority of OECD countries, in which slightly more women (40%) than men (38%) attain a higher education level than their parents. **It seems to be particularly difficult in Austria to attain tertiary education if one's parents ended their schooling before completing upper secondary education:** while in the OECD on average 20% manage to do so, in Austria the figure is only 10%. **Austria is also the country with the greatest downward mobility at the highest educational levels:** while in all other OECD countries, at least 50% of adults with tertiary-educated parents have also attained tertiary education, only 42% of their Austrian counterparts have managed to do so.

Other findings

- **Vocational education remains an important pillar of the Austrian education system:** in 2012, 76% of students who were enrolled in upper secondary education participated in pre-vocational or vocational programmes, the second highest percentage in the OECD.
- **Austria has a low share of young people (15-29 year olds) neither in employment nor in education or training (NEET):** 9.7% compared with an OECD average of 15.0%.
- **Austrian university programmes are very attractive to international students:** Austria shows one of the highest concentrations of international students in the tertiary sector, with 15% of all students coming from abroad.
- **Despite high salaries, the teaching profession in Austria is ageing rapidly:** lower secondary school teachers at the top of the salary scale and with maximum qualifications are paid over USD 78 500, one of the highest salaries across the OECD (average: USD 53 686). At the same time, almost half of Austria's secondary teachers are over 50 years old (OECD average: 36%), and few young people are entering the profession: 24% of secondary teachers are under 40 years old compared with an OECD average of 36%.
