

## *Statistical Tables and Figures*

### **Tables**

- 2.1. [Public LTC expenditure expected to rise significantly by 2050](#)
- 2.2. [Potential impact of changing the mix of public/private financing of LTC](#)
- 3.1. [Unpaid care is mostly directed towards parents and spouses](#)
- 3.2. [Carers are more likely to be home makers, less likely to be employed](#)
- 9.1. [Household composition of net-worth](#)
- 10.4. [Average length of stay for dementia and Alzheimer's disease in acute care \(in days\)](#)

### **Figures**

- 1.1. [Financial sustainability is the most important policy priority for LTC systems in the OECD, 2009-10](#)
- 1.2. [More LTC users receive care at home than in institutions](#)
- 1.3. [Most LTC users are women aged over 80 years](#)
- 1.4. [Approximately half of all LTC users are aged over 80 years](#)
- 1.5. [Younger LTC users receive higher amounts of home care than the very old ones](#)
- 1.6. [LTC workers represent a small share of the working-age population, 2008](#)
- 1.7. [The size of the LTC workforce is limited compared to the number of those in need](#)
- 1.8. [The share of public LTC expenditure is higher than that of private LTC expenditure in OECD countries](#)
- 1.9. [Spending on LTC in institutions is higher than spending at home in OECD countries](#)
- 1.10. [Significant variation in LTC expenditure among OECD countries](#)
- 1.11. [High LTC expenditure is associated with high LTC-worker density](#)
- 2.1. [The share of the population aged over 80 years old will increase rapidly](#)
- 2.2. [The shares of the population aged over 65 and 80 years in the OECD will increase significantly by 2050](#)
- 2.3. [The share of the working-age populations is expected to decrease by 2050](#)
- 2.4. [The very old-age dependency ratio is increasing rapidly](#)
- 2.5. [More surviving old men for each woman by 2050](#)
- 2.6. [Increase in the proportion of old people living in couples, by 2050](#)
- 2.7. [The proportion of frail elderly either living alone or with a frail partner will decrease, but the share of both-frail couples will increase by 2050](#)
- 2.8. [The projected growth in frail elderly greatly outweighs that of potential caregivers](#)
- 2.9. [The average annual growth of LTC expenditure will be significantly higher than real projected GDP growth](#)

- 2.10. [The demand for LTC workers is expected to at least double by 2050](#)
- 2.11. [Change in demand for LTC workers and working-age population by 2050](#)
- 3.1. [Caregiving varies by country and type of help provided](#)
- 3.2. [Informal carers are predominantly women](#)
- 3.3. [Carers tend to provide limited hours of care](#)
- 3.4. [Persons with more ADL limitations require more care](#)
- 3.5. [Carers work fewer hours](#)
- 3.6. [Informal caring results in a lower probability of employment](#)
- 3.7. [Informal carers reduce their working hours when at work](#)
- 3.8. [Carers are more likely to stop working rather than work part-time](#)
- 3.9. [Unpaid caring leads to lower income but not necessarily lower wages](#)
- 3.10. [More mental health problems among carers](#)
- 3.11. [Mental health problems depend on the intensity of caring](#)
- 3.12. [Caregiving leads to higher chances of mental health problems](#)
- 3.A2.1. [Higher care intensity and co-residential care have a stronger negative impact on employment](#)
- 3.A2.2. [Higher care intensity and co-residential care have a stronger negative impact on hours of work](#)
- 3.A2.3. [Higher care intensity and co-residential care have a stronger negative impact on mental health problems](#)
- 3.A2.4. [Intensive carers more likely to be older and more disadvantaged](#)
- 4.1. [Care leave is less frequent than parental leave](#)
- 4.2. [More mothers than family carers among part-time workers](#)
- 4.3. [Care leave and part-time work is more likely in certain sectors](#)
- 4.4. [Carer's allowances generate incentives to reduce work hours](#)
- 5.1. [Higher ratio of LTC users per full-time equivalent worker in home care than in institutions](#)
- 5.2. [Less than half of LTC workers are in home care in most OECD countries](#)
- 5.3. [Most LTC workers are women](#)
- 5.4. [Part-time work is more frequent in home-care settings](#)
- 5.5. [In most OECD countries, less than half of the LTC workforce consists of nurses, mostly employed in institutional settings](#)
- 5.6. [Employment of foreign-born in health and other community services and households](#)
- 7.1. [Users of LTC services vary significantly across the OECD](#)
- 7.2. [Variation in LTC expenditure is not strongly correlated to the share of the population aged over 80](#)
- 7.3. [Long-term care expenditures by sources of funding, 2007](#)
- 7.4. [Comprehensiveness of public LTC coverage across the OECD, 2008](#)
- 8.1. [The private LTC insurance market is small](#)
- 9.1. [The cost associated with low-care need is significant for low-income seniors](#)
- 9.2. [The cost associated with high-care need is significant for most seniors](#)
- 9.3. [Disposable income falls with age](#)
- 9.4. [Public transfers provide the bulk of income in old age](#)

- 9.5. [Median net-worth by age of the household head](#)
- 9.6. [Increasing share of income in the hands of the older segment of the population](#)
- 9.7. [Elderly people's disposable income mainly consists of pension and capital income](#)
- 10.1. [The density of LTC beds in nursing homes has decreased in the past decade](#)
- 10.2. [The share of home-care users has increased accross the OECD](#)
- 10.3. [Trends in institutionalisation rates among OECD countries](#)
