

United Kingdom

United Kingdom: Pension system in 2016

The UK introduced a new State Pension system on 6 April 2016 for people reaching State Pension age from that date onwards. It is a flat rate scheme, with some transitional arrangements. For people who reached State Pension age before that date, the public scheme has two tiers, (a flat-rate basic pension and an earnings-related additional pension. Both are complemented by a large voluntary private pension sector. An income-related benefit (Pension Credit) targets extra spending on the poorest pensioners.

Key indicators: United Kingdom

		United Kingdom	OECD
Average worker earnings (AW)	GBP	36 571	29 697
	USD	45 100	36 622
Public pension spending	% of GDP	6.1	8.2
Life expectancy	at birth	81.7	80.9
	at age 65	20.2	19.7
Population over age 65	% of working- age population	31.0	27.9

Qualifying conditions

State Pension age is currently 65 years for men and is gradually rising to 65 years by November 2018 for women. Increases of the State Pension age to 66 years by October 2020 and to 67 years between 2026 and 2028 have been legislated. The Government has also proposed that subsequent State Pension age changes are to be based on changes in life expectancy. Under the old system, an individual reaching state pension age qualifies for a full basic State Pension by: i) paying; or ii) having been treated as having paid; or iii) being credited with, National Insurance contributions, for 30 qualifying years in their working lives. A proportionally reduced basic state pension is paid to people with fewer than 30 qualifying years, to a minimum of one qualifying year of contribution or credits. People with no pre-existing National Insurance record prior to 6 April 2016 who reach State Pension age from 6 April 2016 will require 35 years of contributions to receive a full new State Pension amount, and the minimum qualifying period will be 10 years. For people with an existing record at 6 April 2016, transitional arrangements take the previous record into account.

Benefit calculation

Basic and new State Pension

The full basic State Pension for a single person was GBP 119.30 per week in 2016/17. The full rate of new State Pension was GBP 155.65 per week in 2016/17.

Workplace Private Pension Provision

In October 2012, the government began rolling out automatic enrolment into workplace pension schemes. Once complete in February 2018, all employers will have a legal duty to enrol all qualifying workers aged between 22 and State Pension age who earn over GBP 10 000 in 2016/17 into a qualifying workplace scheme. Minimum contributions will build to 8% of a statutory earnings band between GBP 5 824 to GBP 43 000 in 2016/17 by April 2019.

To support automatic enrolment, the government established the National Employment Savings Trust (NEST), a trust-based occupational defined contribution scheme, to ensure that all employers are able to access a good quality, low cost pension scheme. NEST has a public service obligation to accept all employers that wish to set up a pension scheme with them regardless of their income.

Targeted

Pension Credit, is a tax free weekly benefit for people who are living on low incomes and guarantees all pensioners an income above a certain level. Pension Credit is an income related benefit and is not based on National Insurance contributions. There are two elements to the Pension Credit, the Guarantee Credit and the Savings Credit. The Guarantee Credit ensures a minimum level of income by providing financial help for people who have reached the qualifying age (see below) and whose income is below their “applicable amount”. The applicable amount is equal to the Standard Minimum Guarantee (which in 2016/17 was GBP 155.60 per week for singles and GBP 237.55 per week for couples), plus additional amounts for people with severe disabilities, caring responsibilities or certain housing costs.

The savings credit is an extra amount for people aged 65 or over who have made modest provision for their retirement. Savings Credit is paid at a rate of GBP 0.6 for each GBP 1 of income above the Savings Credit Threshold (which in 2016/17 was GBP 133.82 per week for singles and GBP 212.97 per week for couples), up to the Savings Credit Maximum (which in 2016/17 was GBP 13.07 per week for singles and GBP 14.75 per week for couples) If an individual has income above their “applicable amount” (that is they are not entitled to the guarantee credit), then each GBP 1 above their “applicable amount” leads to a reduction in Savings Credit of GBP 0.4 (up to the point where they are no longer entitled to Savings Credit)

The qualifying age for Pension Credit is gradually increasing to 65 alongside the increase in women’s State Pension age and will increase further as State Pension age raises beyond 65 for both men and women. The savings credit element of the scheme will not be available to those who reach state pension age on or after 6 April 2016 (i.e. the same cohort which qualify for the new State Pension).

Variant careers

Early retirement

It is not possible to claim a State Pension early. Voluntary pension benefits can be claimed from the age allowed by the scheme.

Late retirement

Deferral of the State Pension has always been possible in order to earn extra State Pension increments. This extra State Pension is paid on top of the normal State Pension when a person eventually claims for the first time or claims again.

The amount of extra money a person gets depends on how long they put off claiming their State Pension. For those reaching State Pension age before 6 April 2016, they may choose one of the following options:

- A higher weekly state pension for life (if the State Pension is deferred for at least 5 weeks). From 6 April 2005, deferral of the State Pension earned approximately 10.4% for each year of deferred claim (or one per cent for every five weeks).
- A one-off taxable lump-sum payment (if the State Pension is continuously deferred for at least one year). The lump-sum is made up of the State Pension foregone during the deferral period plus interest which is guaranteed to be at least two percentage points above the (Bank of England) base rate.

The choice has to be made when the State Pension is eventually claimed.

For those who reach State Pension age from 6 April 2016, it will not be possible to take a lump-sum payment. To receive a higher weekly State Pension for life, the State Pension will need to be deferred for at least nine weeks. Deferral of the new State Pension earns approximately 5.8% for each year of deferred claim (or one per cent for every nine weeks).

Childcare

National Insurance credits for the new State Pension provide protection for periods of child care. This covers both people not in paid work and those working but earning below the lower earnings limit (LEL) who therefore do not contribute to the system.

Unemployment

Periods of unemployment on insurance or assistance benefits are credited to a person's National Insurance contributions record for the new State Pension.

Personal income tax and social security contributions

Taxation of pensioners

No special relief is available for pensioners.

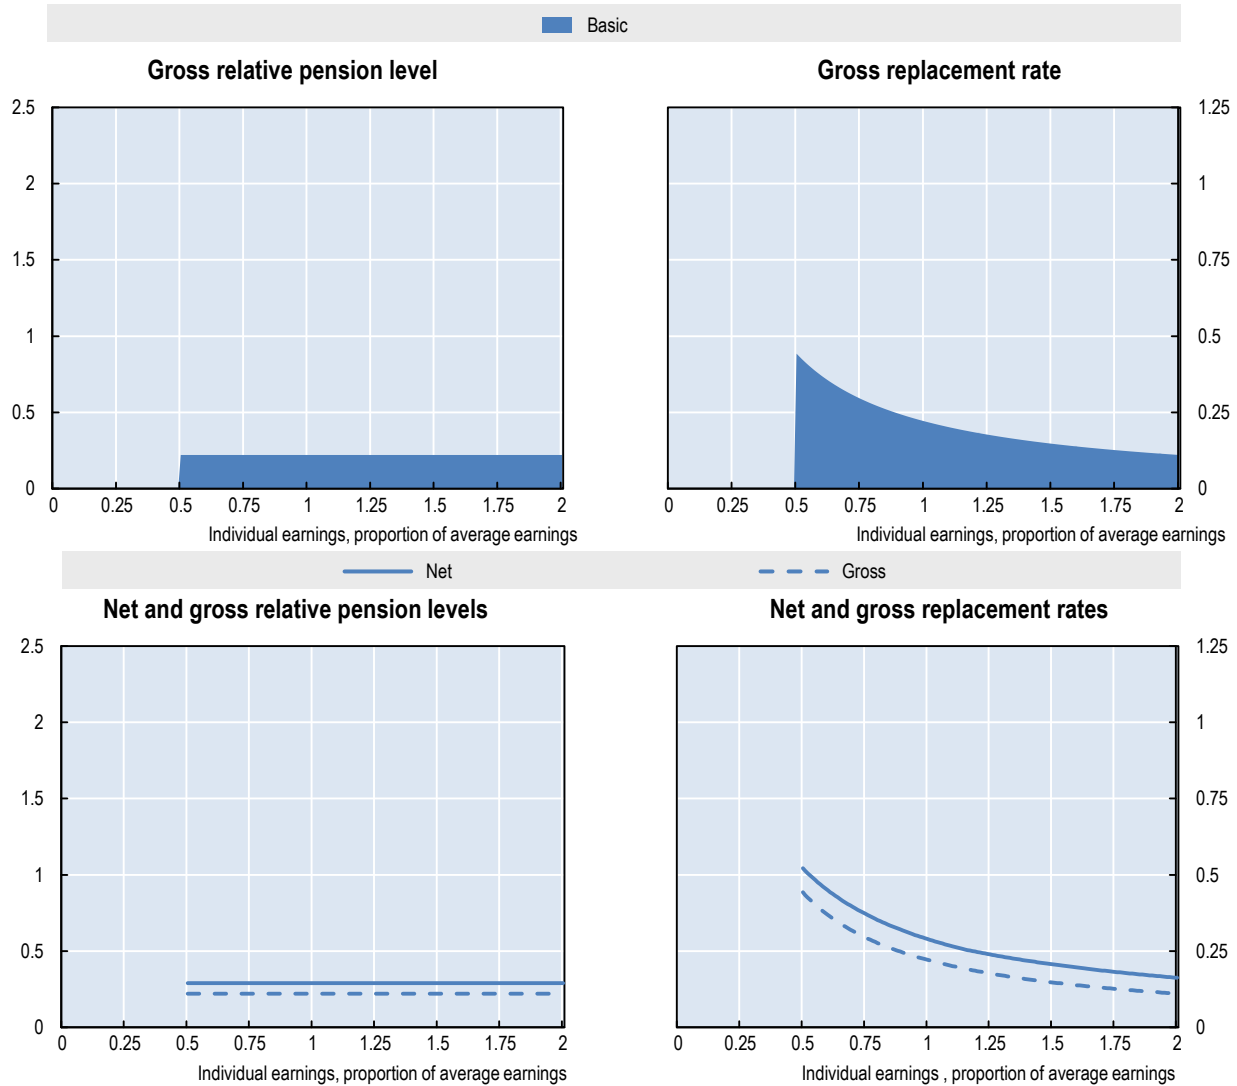

Taxation of pension income

No special relief is available for pension income.

National insurance contributions paid by pensioners

National insurance contributions are not levied on the income of those over State Pension age.

Pension modelling results: United Kingdom in 2064 retirement at age 68

Men Women (where different)	Individual earnings, multiple of average					
	0.5	0.75	1	1.5	2	3
Gross relative pension level (% average gross earnings)	22.1	22.1	22.1	22.1	22.1	22.1
Net relative pension level (% net average earnings)	29.0	29.0	29.0	29.0	29.0	29.0
Gross replacement rate (% individual gross earnings)	44.3	29.5	22.1	14.8	11.1	7.4
Net replacement rate (% individual net earnings)	52.1	37.2	29.0	20.7	16.3	11.7
Gross pension wealth (multiple of individual gross earnings)	8.9	5.9	4.4	3.0	2.2	1.5
Net pension wealth (multiple of individual net earnings)	10.5	7.5	5.8	4.1	3.3	2.4
	11.2	8.0	6.2	4.4	3.5	2.5

Assumptions: Real rate of return 3%, real earnings growth 1.25%, inflation 2%, and real discount rate 2%. All systems are modelled and indexed according to what is legislated. Transitional rules apply where relevant. DC conversion rate equal 90%. Labour market entry occurs at age 20 in 2016. Tax system latest available: 2015.
