

# New Zealand

## New Zealand: Pension system in 2018

The public pension is a set of flat rates based on a residency test and age requirement. Coverage of occupational pension plans continues to diminish. Coverage of the KiwiSaver voluntary workplace savings scheme continues to grow.

## Key indicators: New Zealand

		New Zealand	OECD
Average worker earnings (AW)	NZD	60 360	60 100
	USD	41 764	41 584
Public pension spending	% of GDP	4.9	8.0
Life expectancy	at birth	82.0	80.7
	at age 65	20.6	19.7
Population over age 65	% of working- age population	28.3	31.2

StatLink  <http://dx.doi.org/10.1787/888934043720>

## Qualifying conditions

Ten years' residency since the age of 20 (including five years after age 50) entitles people to the public pension from 65 years of age.

## Benefit calculation

### Basic

The pension for a single person living alone was NZD 463.04 gross per week from 1 April 2018. For 2017/18, the rate was NZD 450.10. The increase is due in part to the normal annual adjustment process, outlined below and in part to a government commitment, also outlined below. This gives a total pension of NZD 24 078 gross per annum, equivalent to around 40 percent of gross average earnings.

State pension entitlements from other countries are taken into account in calculating the total public pension that is payable.

The rate of public pension is adjusted annually by the movement in the Consumer Price Index, but it must also maintain a relationship with the average net-of-tax weekly wage. For a couple who both qualify, the governing legislation requires that the net-of-tax rate at each 1 April must not be less than 65 percent and not more than 72.5 percent of a net-of-tax surveyed weekly earnings measure (for the preceding December quarter). The net-of-tax rates for single people are set at 65 percent (living alone) and 60 percent (sharing accommodation) of the net-of-tax couple rate. If movements in prices remain consistently below movements in the net-of-tax surveyed weekly earnings, weekly earnings effectively become the index.

The current government has made a commitment that the net-of-tax couple rate at each 1 April is to be a minimum of 66 percent rather than 65 percent of the net-of-tax earnings measure. This also affects the floor on the single living alone and single sharing rates.

A Winter Energy Payment was introduced in 2018. This is paid automatically to pensioners and beneficiaries over winter (from 2019, this is from 1 May to 1 October) to help with the cost of heating a home. The rate for a single person with no dependent children is NZD 20.46 per week (not taxable).

Older people with limited assets and income may also access the Accommodation Supplement. The Accommodation Supplement subsidises 70 percent of housing expenses over a certain threshold (this threshold was NZD 100 per week at 1 April 2018 for a single pensioner living alone and renting), up to a limit that varies by region and household composition.

### ***Voluntary private pensions***

Coverage of occupational pension plans has been falling for some time. The ratio of those in total employer sponsored schemes as a percentage of the employed workforce fell from 13.89% in 2003 to 9.98% in 2012. These plans are not government-subsidised through the tax system or otherwise.

KiwiSaver is a government-subsidised voluntary direct contribution retirement saving scheme introduced on 1 July 2007. At 31 March 2018, approximately 80% of New Zealanders aged 18-64 were KiwiSaver members. The default minimum contribution rate for this scheme is 6% of earnings, divided equally between employees and employers. Employees are able to select a higher personal contribution rate of 4%, 6%, 8% or 10%.

Government subsidies are available to eligible savers to a maximum of NZD 521 per year. Prior to May 2015, members also received a NZD 1 000 contribution when they joined. KiwiSaver entitles members to a lump sum, not a pension, on withdrawal at age 65 or over. While funds are generally ‘locked-in’ until age 65, there are provisions to withdraw some funds earlier to assist with the purchase of a first home, or in cases of financial hardship, death, serious illness or permanent emigration.

As the scheme is currently still relatively new, withdrawal balances are small – the 19 300 people who ‘aged out’ of KiwiSaver in the year to 31 March 2018 withdrew an average of NZD 37 900.

### **Variant careers**

#### ***Early retirement***

There is no compulsory retirement age. However, it is not possible for persons to claim the pension in their own right before the normal eligibility age of 65. People aged 65 years and over can include a non-qualifying partner in their pension, subject to income-testing against the couple’s total income.

#### ***Late retirement***

Receipt of the public pension is not dependent on retirement. It is therefore possible to combine pension and employment. At September 2018, 24.1 percent of people aged 65 or over were in paid work.

While people are not obliged to claim the public pension on reaching the qualifying age, there is no advantage in deferring a claim and retrospective claims are not allowed.

#### ***Childcare***

Eventual public pension entitlement is not affected by periods out of paid work for caring purposes.

#### ***Unemployment***

Eventual public pension entitlement is not affected by periods of unemployment.

### **Personal income tax and social security contributions**

#### ***Taxation of pensioners***

New Zealand does not provide any tax concessions specifically for older people. The SuperGold Card programme for those aged 65 years and over entitles cardholders to concessions from central and local government agencies such as free off-peak travel on public transport, as well as discounts at more than 14 000 business outlets.

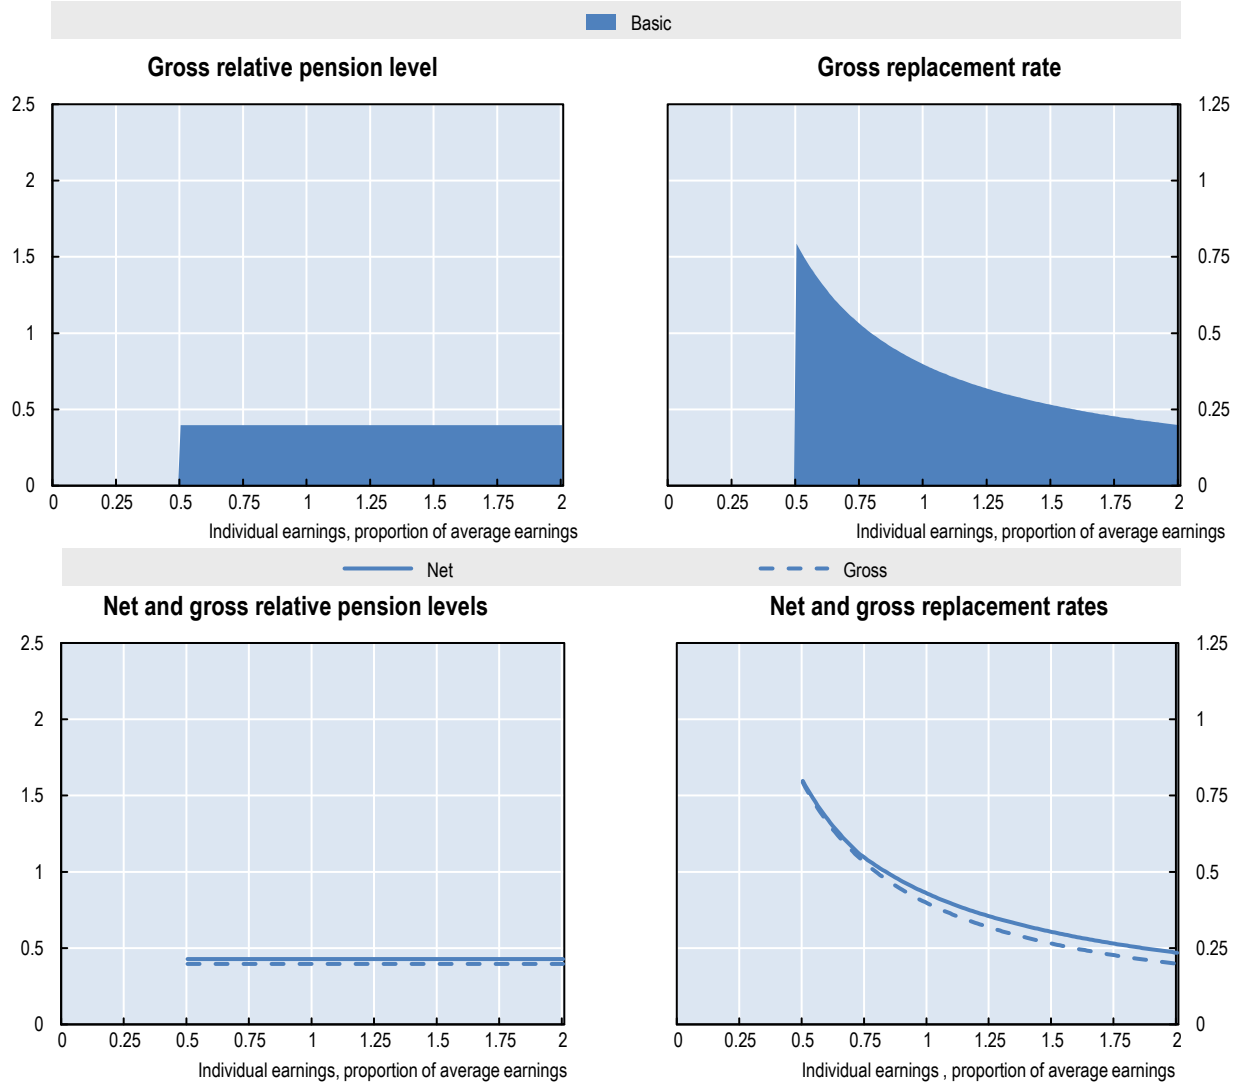

***Taxation of pension income***

The public pension is subject to personal income tax (in the same manner as any other personal income). Note that the calculations for the worker tax differ slightly from those reported in the OECD's *Taxing Wages*. For workers, these include the Accident Compensation Corporation levy, set at 1.39 percent from 1 April 2016, which is not paid on pension income, although pensioners remain covered by the scheme. As a result, people below pension age pay a slightly higher average effective tax rate than pensioners do.

***Social security contributions paid by pensioners***

The New Zealand public pension system is funded from general taxation and there are no specific social security contributions.

## Pension modelling results: New Zealand in 2061 retirement at age 65

Men Women (where different)	Individual earnings, multiple of average					
	0.5	0.75	1	1.5	2	3
Gross relative pension level (% average gross earnings)	39.7	39.7	39.7	39.7	39.7	39.7
Net relative pension level (% net average earnings)	42.8	42.8	42.8	42.8	42.8	42.8
Gross replacement rate (% individual gross earnings)	79.3	52.9	39.7	26.4	19.8	13.2
Net replacement rate (% individual net earnings)	79.8	54.5	42.8	30.3	23.5	16.2
Gross pension wealth (multiple of individual gross earnings)	17.4	11.6	8.7	5.8	4.3	2.9
Net pension wealth (multiple of individual net earnings)	17.5	11.9	9.4	6.6	5.1	3.5
	18.8	12.8	10.1	7.1	5.5	3.8

Assumptions: Real rate of return 3%, real earnings growth 1.25%, inflation 2%, and real discount rate 2%. All systems are modelled and indexed according to what is legislated. Transitional rules apply where relevant. DC conversion rate equal 90%. Labour market entry occurs at age 22 in 2018. Tax system latest available: 2018.
