

Pensions at a Glance 2023

Czechia

Czechia: Pension system in 2022

The Czech pension system consists of a public pension scheme and a voluntary funded private scheme which is mandatory once joined. The public contributory pension scheme has a basic element and an earnings-related part calculated according to a progressive formula.

Key indicators: Czechia

		Czechia	OECD
Average worker earnings (AW)	CZK	472 783	963 733
	USD	20 242	41 261
Public pension spending	% of GDP	7.9	7.7
Life expectancy	at birth	78.2	80.7
	at age 65	82.1	84.6
Population over age 65	% of working-age population	35.3	31.3

Qualifying conditions

The standard retirement age is currently 63 years and 10 months for men and women without children. Women who raised children have lower retirement ages depending on the number of children. The age is gradually increasing by two months per birth cohort until reaching age 65. The retirement age for women with children is increasing at a faster rate so that all retirement ages will be 65. To be eligible to a pension at the statutory retirement age, the minimum years of required paid or credited coverage is 35 years (or 30 years without credits). Individuals with 20 years of pension coverage or 15 years without credited periods can receive a pension benefit five years later than the standard retirement age for males of the same birth cohort.

Benefit calculation

Contributory basic

The value of the basic pension is equal to 10% of the legislated average wage. In 2022 this translated into an annual benefit equal to CZK 46 800.

Earnings-related

The earnings-related pension gives 1.5% of the reference wage for each service year. The earnings measure currently averages across all years starting from 1986, but it will gradually reach lifetime average. Earlier years' earnings are valorised by the growth of the legislated average wage.

There is a progressive benefit formula for the calculation of the reference wage, under which monthly income thresholds are applied to reduce average career earnings into the calculation basis. The first threshold is 44% of the legislated average wage and the second 400%. The first reduction threshold was equal to CZK 17 121 and the second was CZK 155 644 in 2022. Up to the first threshold the earnings are

replaced at 100% and between the first and second at 26%. Earnings over the second threshold are not taken into account.

The combined total average pension benefit (flat-rate and earnings-related components) is increased by the greater of general price inflation and pensioner specific inflation, plus half of the real wage growth.

Minimum

The total value of the minimum monthly public pension benefit is CZK 4 670, made up of a minimum earnings-related pension of CZK 770 plus the basic component of CZK 3 900.

Social assistance

The so-called “living minimum” for individuals (and therefore also pensioners that live alone) amounted to CZK 4 620 per month.

Variant careers

Early retirement

It is possible to retire three years (increasing to five years, but no earlier than age 60) before the standard retirement ages subject to 35 years of coverage. The total accrual factor (i.e., number of years of contributions multiplied by the accrual rate) is permanently reduced by 0.9% for each 90 days of the first 360 days of early retirement (3.6% per year), 1.2 % for each 90 days between 361 and 720 days (4.8% per year) and 1.5% for each 90 days thereafter (6% per year).

Late retirement

It is possible to defer claiming the pension beyond the normal pension age. The total accrual factor is increased by 1.5% for each 90-day period of deferral (6% per year). There is no additional pension accrual for deferred retirement. It is also possible to combine pension receipt while continuing to work. The accrual rate is increased by 0.4% for every 360 days of work if claiming the full pension and by 1.5% for every 180 days of work if only claiming half the pension.

Childcare

There are credits for labour-market absences during periods caring for children up to four years old (or older in case of severe disability). These years are then ignored in the calculation of earnings for pension purposes so that these absences do not reduce the assessment base. (This approach is used for all non-contributory periods).

In addition, starting in 2023, a CZK 500 top-up to the earnings-related pension is granted for each raised child to the person (parent) who cared for the child in question to the greater extent. The value of this pension component is annually indexed using the same rule as for the earnings-related pension component in payment.

Unemployment

Periods on earnings-related unemployment insurance are credited in the pension system. The duration of unemployment insurance entitlement varies with age: five months up to age 50, eight months from 50 to 55 and 11 months for over 55s. In addition, up to three years spent unemployed without entitlement to unemployment insurance are also credited (but only one year of unemployment without benefits before

4 | PENSIONS AT A GLANCE: COUNTRY PROFILES – CZECHIA

the age of 55 is credited). The unemployment period used for the pension calculation is reduced to 80%, meaning that if an individual had five years' unemployment over the career, this would count as four years for pension purposes. If the unemployment period is in the decisive (reference) period for the average assessment base calculation, this period is excluded from the calculation and only the income from which the premium is paid is used.

Self-employed

The self-employed are covered by the same pension scheme as employees and the total pension contribution rate is 28% for both employees and self-employed workers.

The base for social security contributions is set at 50% of profits before paying social security contributions, with a minimum of 25% of the economy wide average wage.

Personal income tax and social security contributions

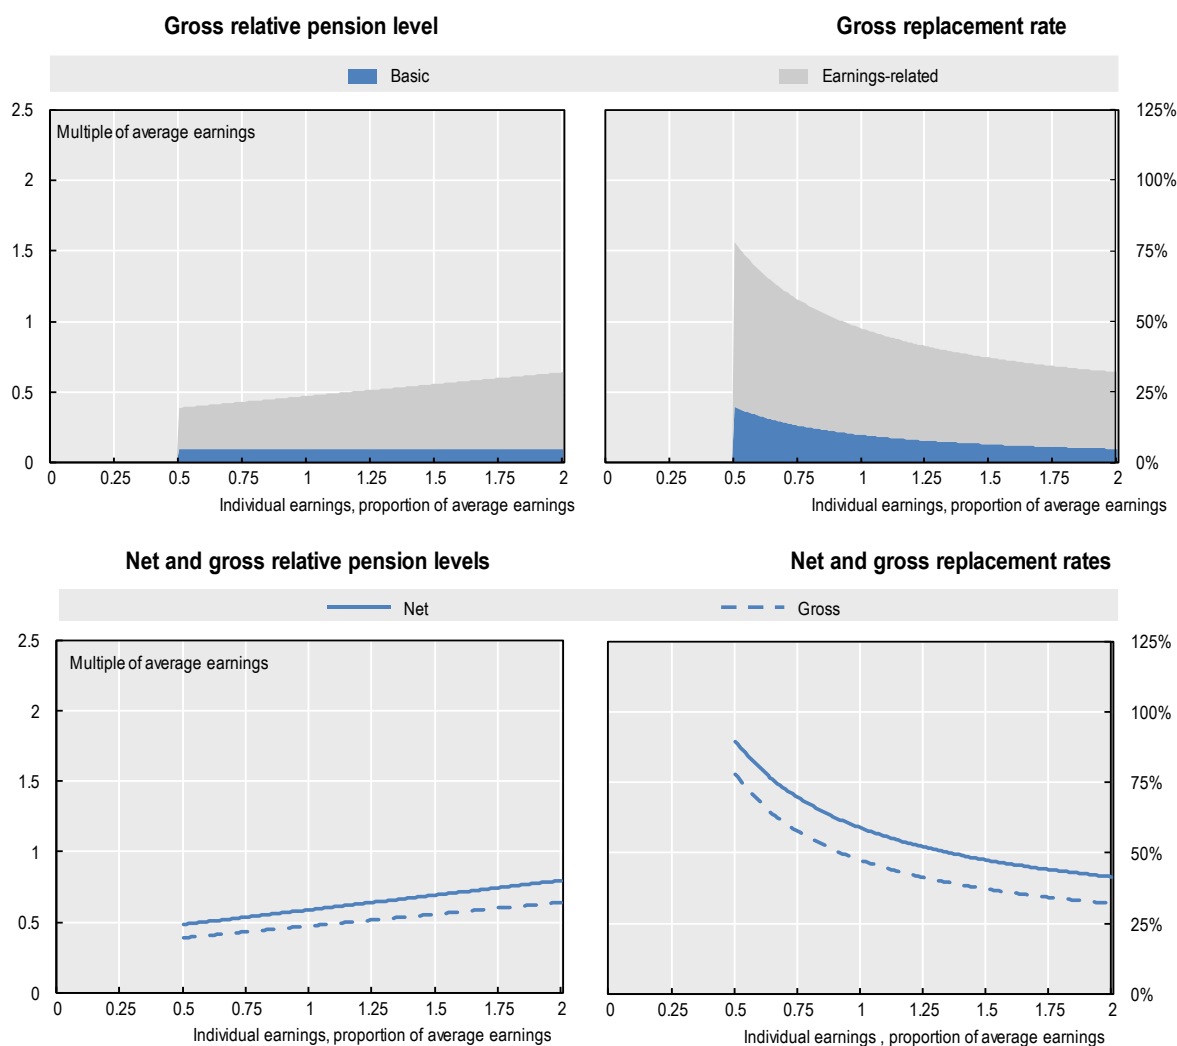

Taxation of pensions

Old-age pensions are not taxed up to a value of CZK 439 200 per annum. Above this the tax rate is 15%.

Social security contributions paid by pensioners

Recipients of pensions do not pay social security contributions from their pensions, but they pay social security contributions for income from work.

Pension modelling results: Czechia in 2065 retirement at age 65

Men Women (where different)	Individual earnings, multiple of average					
	0.5	0.75	1	1.5	2	3
Gross relative pension level (% average gross earnings)	39.0	43.2	47.4	55.8	64.2	81.0
Net relative pension level (% net average earnings)	48.5	53.7	58.9	69.3	79.7	100.5
Gross replacement rate (% individual gross earnings)	78.1	57.6	47.4	37.2	32.1	27.0
Net replacement rate (% individual net earnings)	89.7	69.7	58.9	47.5	41.5	35.4
Gross pension wealth (multiple of individual gross earnings)	16.0	11.8	9.7	7.6	6.5	5.5
Net pension wealth (multiple of individual net earnings)	18.3	14.2	12.0	9.7	8.4	7.2
	20.5	15.9	13.4	10.8	9.4	8.0

Assumptions: Real rate of return 2.5%, real earnings growth 1.25%, inflation 2%, and real discount rate 1.5%. All systems are modelled and indexed according to what is legislated. Transitional rules apply where relevant. DC conversion rate equals 90%. Labour market entry occurs at age 22 in 2022. Tax system latest available: 2022.
