OECD/IEA AIXG Seminar

Boosting Investment and Clean Technology for Mitigation

Christiana Figueres - Chair's summary

Financing Mitigation

- 1- Most (3/4) financing in climate relevant sectors is private sector investment.
- 2- Domestic private and public financing: key in infrastructure.
- 3- Finance flows for development follows demand-driven principles and managing for results.
- 4- There is a need for stable domestic regulatory or policy frameworks, including a strong carbon signal.

Financing Mitigation

- 5- CDM and other types of financing should be vehicles for mainstreaming policy reform internally. Soft financing is a key to cover costs between domestic BAU investment and carbon upgrade.
- 6- Take advantage of coordinated recovery plan for green transformation. Front load the investment (e.g. Government Bounds & loan guarantees)

Technology

- 1 - Investment create virtuous cycle, a continuous constructed dynamic between policy, market (push-pull) and replicable TT. Policy transformation → Market transformation
- 2 - Different categories of policy options, risk sharing and incentives are needed for different technologies. Different types of financing to get R & D new technologies deployed.

Key Points

- Towards a new definition of Public – Private – Partnership?
- Design new regime
 - Regulatory framework
 - Strong economic signal to make investment in climate-friendly technology profitable

THANK YOU!
