France has the largest government expenditures among OECD countries. Public expenditures were 55.6% of France’s GDP in 2019, the highest in the OECD (Figure 2.22). The main driver is social protection expenditures of 23.9% of GDP, almost double the OECD average of 13.3% (Figure 2.25).

France can build further on diversity and inclusion in the public sector and public life. France is ranked fifth in the OECD pilot index on developing a diverse public sector workforce (Figure 6.5), but 27th for the share of women in middle management in the public sector. France also has the lowest share of MPs under 40 among OECD countries (7.6%, Figure 3.12).

France performs strongly on access to public services, but less so on responsiveness and quality. DFrance ranks best in the OECD on out-of-pocket expenditure as a share of health spending, and on school enrolment at age 4 (Scorecard 1). However, it ranks much closer to the OECD average on other measures of public service responsiveness and quality (Scorecards 2 and 3).

Chapter 14 – Serving citizens
Public governance practices

**Composite indices of public service leadership and capability** (2020)
From 0 (worst) to 1 (best)

1. Development of a diverse workforce: 0.63
2. Policies to manage senior civil servants: 0.49

**Green budgeting tools** (2021)

1. Ex ante or ex post environmental assessment: YES
2. Ex ante or ex post green budget tagging: YES

**Objectives included in infrastructure and public procurement strategies** (2020)

1. Public procurement strategy includes responsible business conduct objectives on...
   - Environment: YES (21 YES, 5 NO)
   - Human rights: YES (13 YES, 13 NO)
   - Gender: YES (8 YES, 18 NO)

2. Infrastructure strategy includes objectives on...
   - Environment: N. A. (5 YES, 19 NO)
   - Human rights: N. A. (5 YES, 19 NO)
   - Gender: N. A. (7 YES, 17 NO)

**Citizen and stakeholder participation** (2020 or 2021)

1. Early consultation in the regulation-making process:
   - NOT SYSTEMATIC: 8 SYSTEMATIC/2 NEVER

2. Centres of government consulted stakeholders on strategies to manage the COVID-19 crisis:
   - YES: 20 YES, 6 NO

3. Central government portal(s) for carrying out online consultations:
   - N. A.: 22 YES, 10 NO

**Digital government index** (2019)
Composite index from 0 (worst) to 1 (best)

0.57

**Figure notes**

- Data on Public finance and economics, which are based on the System of National Accounts (SNA), were extracted on 11 May 2021 and data on General government employment were extracted on 12 April 2021. The range of country values refers to year 2019.
- Fiscal balance as reported in SNA framework, also referred to as net lending (+) or net borrowing (-) of government, is calculated as total government revenues minus total government expenditures.
- Government gross debt is reported according to the SNA definition, which differs from the definition applied under the Maastricht Treaty. It is defined as all liabilities that require payment or payments of interest or principal by the debtor to the creditor at a date or dates in the future. All debt instruments are liabilities, but some liabilities such as shares, equity and financial derivatives are not debt.
- The range of country values for the central government workforce by age refers to the 18-34 group.
- Data on trust in the civil service and parliament are 2018 for most countries.
- Data on the central government workforce by age, share of women in management positions and Composite indices of public service leadership and capability for France are for 2018.
- The range of country values for share of women in management positions in the central government refers to senior management.
- Citizens who express satisfaction with public services: for the judiciary and the police, the data reflect the proportion of citizens who express having confidence in the institution.
- The range of country values for income inequality before taxes and post taxes and transfers refers to GINI after taxes and transfers for the working age population.

**Government at a Glance 2021**

Published every two years, Government at a Glance provides reliable, internationally comparable indicators on government activities and their results in OECD countries.

The 2021 edition includes input indicators on public finance and employment; while processes include data on institutions, budgeting practices and procedures, human resources management, regulatory governance, public procurement, the governance of infrastructure, public sector integrity, open government and digital government. Outcomes cover core government results (e.g. trust, political efficacy, inequality reduction) and indicators on access, responsiveness, quality and citizen satisfaction for the education, health and justice sectors. Governance indicators are especially useful for monitoring and benchmarking governments’ progress in their public sector reforms.

Each indicator in the publication is presented in a user-friendly format, consisting of graphs and/or charts illustrating variations across countries and over time, brief descriptive analyses highlighting the major findings conveyed by the data, and a methodological section on the definition of the indicator and any limitations in data comparability.

The Excel spreadsheets used to create the tables and figures in Government at a Glance 2021 are available via the StatLinks provided throughout the publication: [https://doi.org/10.1787/1c258f55-en](https://doi.org/10.1787/1c258f55-en)
