

Government measures integrating RBC objectives into contracts - Poland

Public Procurement Principle: **Balance**

Procurement Stage: **Post-award**

Audience: **Policy makers, Procuring entity**

Description

In Poland, the Public Procurement Office developed a broad information and training campaign for contracting authorities and representatives of control bodies to build their knowledge of what environmental objectives should be considered during the tendering process of a specific product/category group. This campaign also includes how this might be done in the course of the contract award procedure (i.e. subject-matter of contract, award criteria, contract performance clauses, qualification criteria with reference to economic operators). The information and training campaign covers not only public procurement provisions, but environmental-related legislation as well.
