

Integration of the SEACE with other IT systems in Peru

Public Procurement Principle: **E-procurement transparency, Efficiency**

Procurement Stage: **All phases**

Audience: **Policy makers, Procuring entity, Private sector, Civil society**

Description

Government Procurement Supervising Agency of Peru, integrated its e-procurement system of Peru, SEACE, with other government systems such as: 1. The Integrated Financial Management System (SIAF) of the Ministry of Economy and Finance (MEF) allows direct online linking for certifying the budgetary credit, enabling procuring entities to publish their procurement notices. SIAF also allows online direct linking for transferring information and contract data (suppliers' RUC, amounts, etc.). This linking enables the entities to register commitments, accruals and payments. 2. The National Registry of Suppliers (RNP) of the OSCE allows direct online linking in order to verify if the suppliers are registered in the RNP. That registration enables suppliers to participate, present their bids and be awarded with and sign the contract. 3. The Single Register of Contributors (Registro Único de Contribuyente, RUC) of the National Superintendence of Customs and Tax Administration (SUNAT) is directly linked with SEACE in order to obtain the denomination of the natural or judicial person that will be paid as a result of the procurement. 4. The INFObras System of the Office of the General Comptrollership of the Republic allows direct online linking with procurement related to public works, which enables publication of the procurement notice.
