COVID-19 has disrupted health care for people with other needs. The mental health impact has been huge. Smoking, harmful drinking & obesity are the root cause of many chronic conditions. COVID-19 has led to increases in health spending. Vaccines have reduced weekly deaths from COVID-19. However, vaccination rates remain very low in many developing countries. Older people and socially disadvantaged groups are more likely to be severely ill or die from the virus. Prevalence of anxiety and depression is more than double the levels observed prior to the pandemic. Smoking, harmful drinking & obesity are the root cause of many chronic conditions. These factors also increase the risk of people dying from COVID-19.
