

Preventing Harmful Alcohol Use

Alcohol can be a source of enjoyment and is an important part of the economy in many countries. Yet harmful alcohol use is a leading risk factor for premature death, injuries and many non-communicable diseases. Harmful alcohol use can also affect others, for example in the case of violence and foetal alcohol syndrome. These diseases and injuries, in turn, have an impact on healthcare budgets and the productivity of the labour force.

Luxembourg

Luxembourg has one of the highest levels of alcohol consumption in the OECD – **12.9 litres of pure alcohol** per capita per year, roughly equivalent to 2.6 bottles of wine or 5 litres of beer per week per person aged 15 and over. In addition, in Luxembourg, some population groups are at higher risk than others; specifically:

48% of adults engage in binge drinking at least once a month. This corresponds to drinking more than 80% of a bottle of wine or 1.5 litres of beer per occasion.

Men consume **19.5 litres** of pure alcohol per capita per year while women consume **6.4 litres** per capita per year.

Women are **6% more likely** to binge drink monthly if they have **completed higher education**

10% of girls and 10% of boys aged 15 **have been drunk** at least twice in their life. Children who never experienced drunkenness are **39% more likely** to perform well at school.

Life expectancy is **1.0 year lower** over the next 30 years due to disease and injuries caused by drinking more than 1 drink per day for women and 1½ drinks per day for men, on average in the whole population, according to OECD simulations.

Impact on life expectancy

Impact on health expenditure

Based on current consumption patterns in **Luxembourg**, OECD simulations estimate that diseases and injuries caused by drinking above 1-1½ drinks per day lead to treatment costs equal to **3.9% of health expenditure** and a reduction in the workforce productivity. Consequently, Luxembourg's **GDP** is estimated to be **1.2% lower** on average between now and 2050, excluding any impact on the alcohol industry. Due to a lower GDP, and to maintain a constant public debt-to-GDP ratio, **Luxembourg** has to raise additional revenues equivalent to an increase in tax of **EUR 321** per person per year.

Implementation level of policies to address harmful alcohol use in Luxembourg

OECD analysis of WHO data reflects the implementation status across policy areas within the WHO's *Global Strategy to Reduce the Harmful Use of Alcohol*.

Luxembourg has overall a very good level of policy implementation, but there are opportunities for further action. Policy priorities could include:

- Strengthening **restriction on availability** of alcohol to vulnerable and high-risk groups, for instance in public environments;
- Improving the implementation of **screening and counselling** within primary care services for people who drink heavily;
- Upscaling action to **tackle drink-driving** to prevent road traffic crashes and injuries;
- Introducing **health warning label** on alcohol containers.

1-lower level of implementation, 4-higher level.
Countries with a maximum score can still enhance policy implementation and enforcement.

*Limited data available which contributed to a lower score

OECD analyses looked at enhanced policy package to tackle harmful alcohol use. The package contains many of the policy priorities for Luxembourg, including:

Strengthening sobriety checkpoints to counter drink-driving

Complete ban on alcohol advertising to children via traditional and new media, sponsorships, branding and point-of-sale displays

Alcohol taxation

Strengthening screening and counselling in primary care

Strengthening regulation on alcohol advertising, sponsorships, branding and point-of-sale displays

Minimum unit pricing targeting cheap alcohol

In Luxembourg, investing EUR 2.5 per person per year in the enhanced policy package to tackle harmful alcohol use will:

- prevent **37 thousand non-communicable diseases and injuries** by 2050;
- save **EUR 14 million** per year in health costs;
- increase employment and productivity by the equivalent of **421 full-time workers** per year.

For every **EUR 1 invested** in the policy package, **EUR 16** are returned in benefits, not considering any impact on the alcohol industry.
