

Institutional Arrangements for the Effective Delivery of PPP

Martin Darcy

6th July 2006

What do you need to create a good quality PPP Programme?

- Political Support
- Clear legal framework and guidance
- Institutional co-ordination
- New skills and new mindset
- Projects that have:
 - Clear objectives
 - Clear boundaries
 - Clear links to stated policy objectives
 - Clearly defined and understood risk strategy
- Previous experience – what will/won't work

What can a Central Body Achieve?

- Promotes Credibility with the Market
- Promotes Projects to the Market
- Co-ordination of public bodies
- Can be the promoter of initiatives eg legal guidance documentation
- Can bring in new skills, mindset and experience
- Can check proposed projects for errors
- Advice and support to project sponsors

Essential Attributes of a Central Body

- Direct route to cabinet level minister
- Outside Civil Service Structure
- Governance structure drawn from public and private sectors
- Clear mandate / legislative direction
- Sufficient budget to support activities
- External expertise
- Policy and practice separated
- Mission: 'Market making and working with the market'
- **BUT!**...must understand that PPP is not an end in itself

Examples of bodies

- Treasury Taskforce UK
- Partnerships UK
- Strategic Investment Board NI
- National Development Finance Agency IE
- PPP Centrum CZ
- Keniscentrum NL
- PPP Taskforce IT

Delivery Bodies for Specific Programmes or Projects

- Key Issues:
 - Clear lines of authority – governance and management
 - Advisory Boards NOT Executive Boards
 - Single senior official ‘ownership’ of the project with direct communication route to minister
 - An empowered Programme or Project Director reporting directly to the ‘Owner’
 - Programme/Project Director MUST have previous experience – therefore likely to be from outside the Civil Service. Strong leadership skills required.
 - Project Office – common identity / common destiny
 - Must obtain the necessary skills and pay market rates for those skills.

Why is it important to get this right?

- Good projects:
 - create economic benefits and growth
 - create confidence in a country's economy
 - create value for money solutions thus minimising tax-take
- Bad projects:
 - create ongoing liabilities for many years
 - big projects = big risks
 - failure is often high profile: nationally and internationally
 - can undermine investor confidence in the country
 - can make the good projects unaffordable

Thank You!!
