

Changes in the global income distribution and their political consequences

Branko Milanovic
Winter 2018-19

Based on:

And forthcoming...

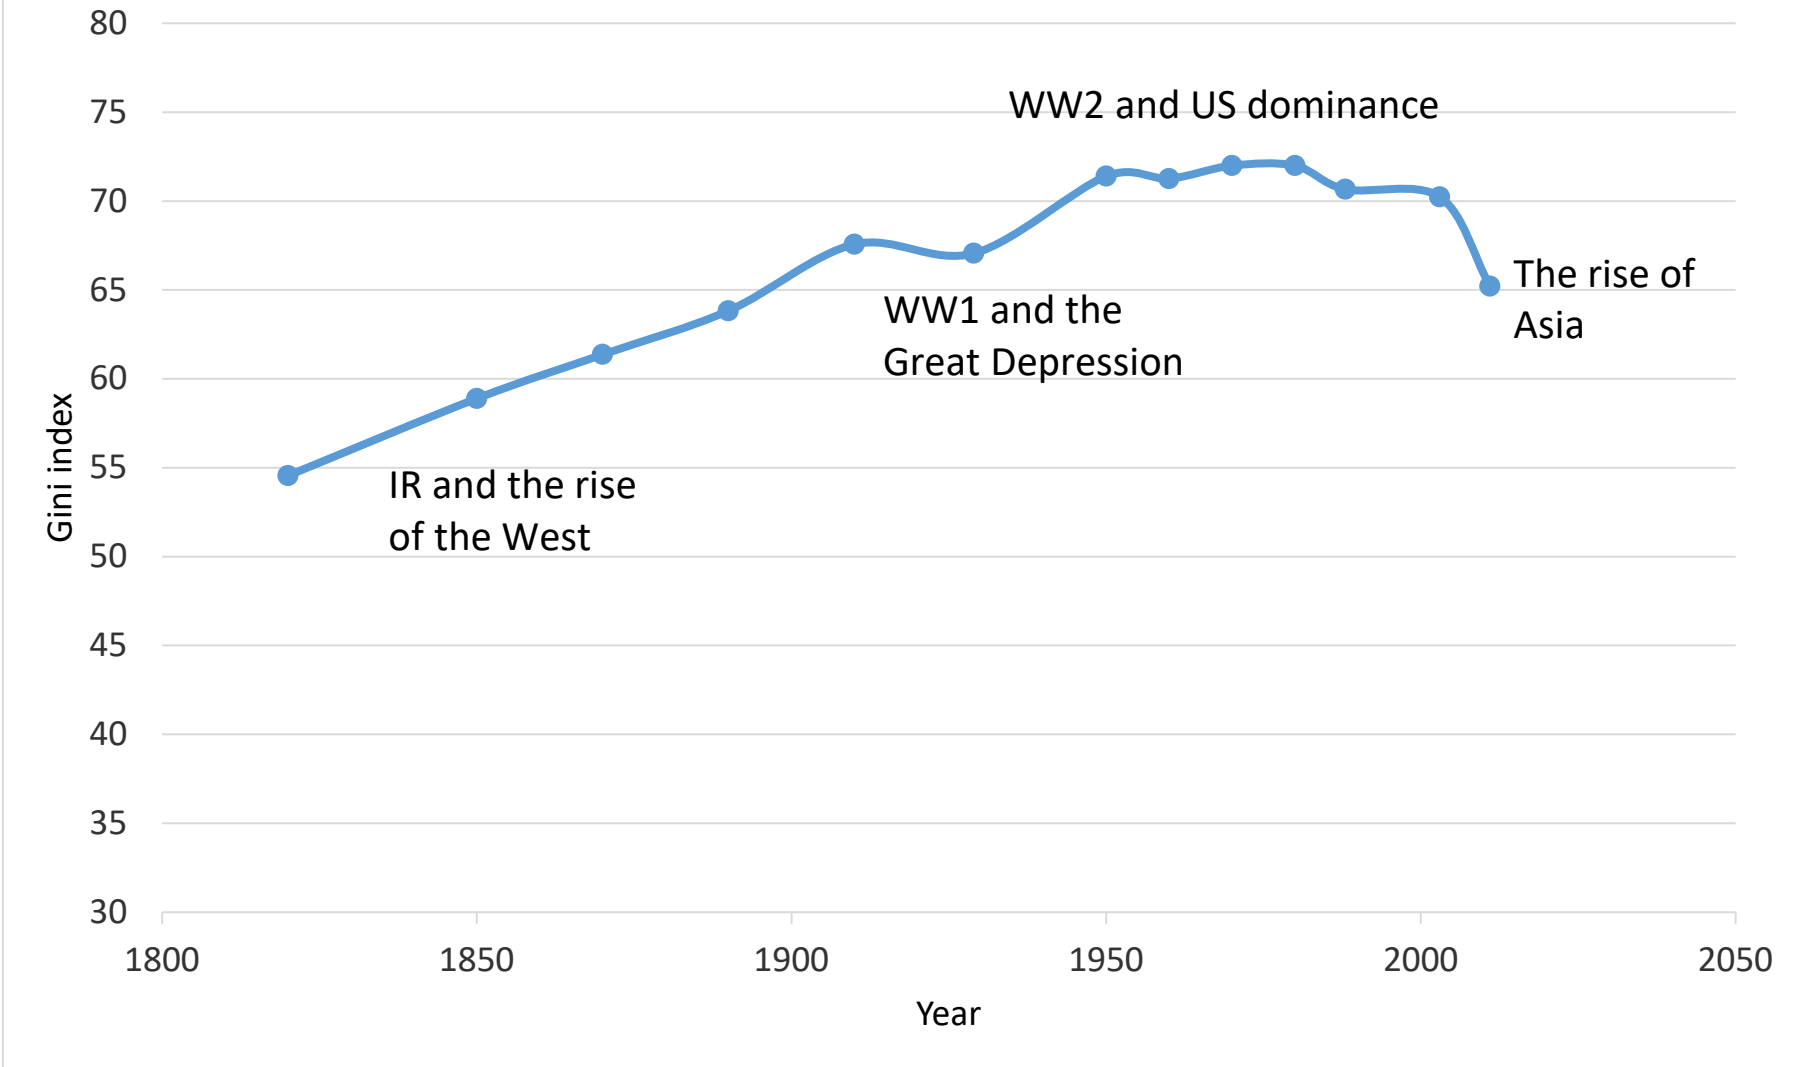

Structure of the talk

- Uniqueness of the current period: Capitalism rules alone + the reemergence of Asia (bringing the distribution of economic activity within Eurasia to the way it looked around 1500)
- Emergence of the global “middle/median class” and shrinkage of national middle classes
- Political/philosophical issues brought up by looking at global, as opposed to only national, inequalities
- The past 25 years in the rich world

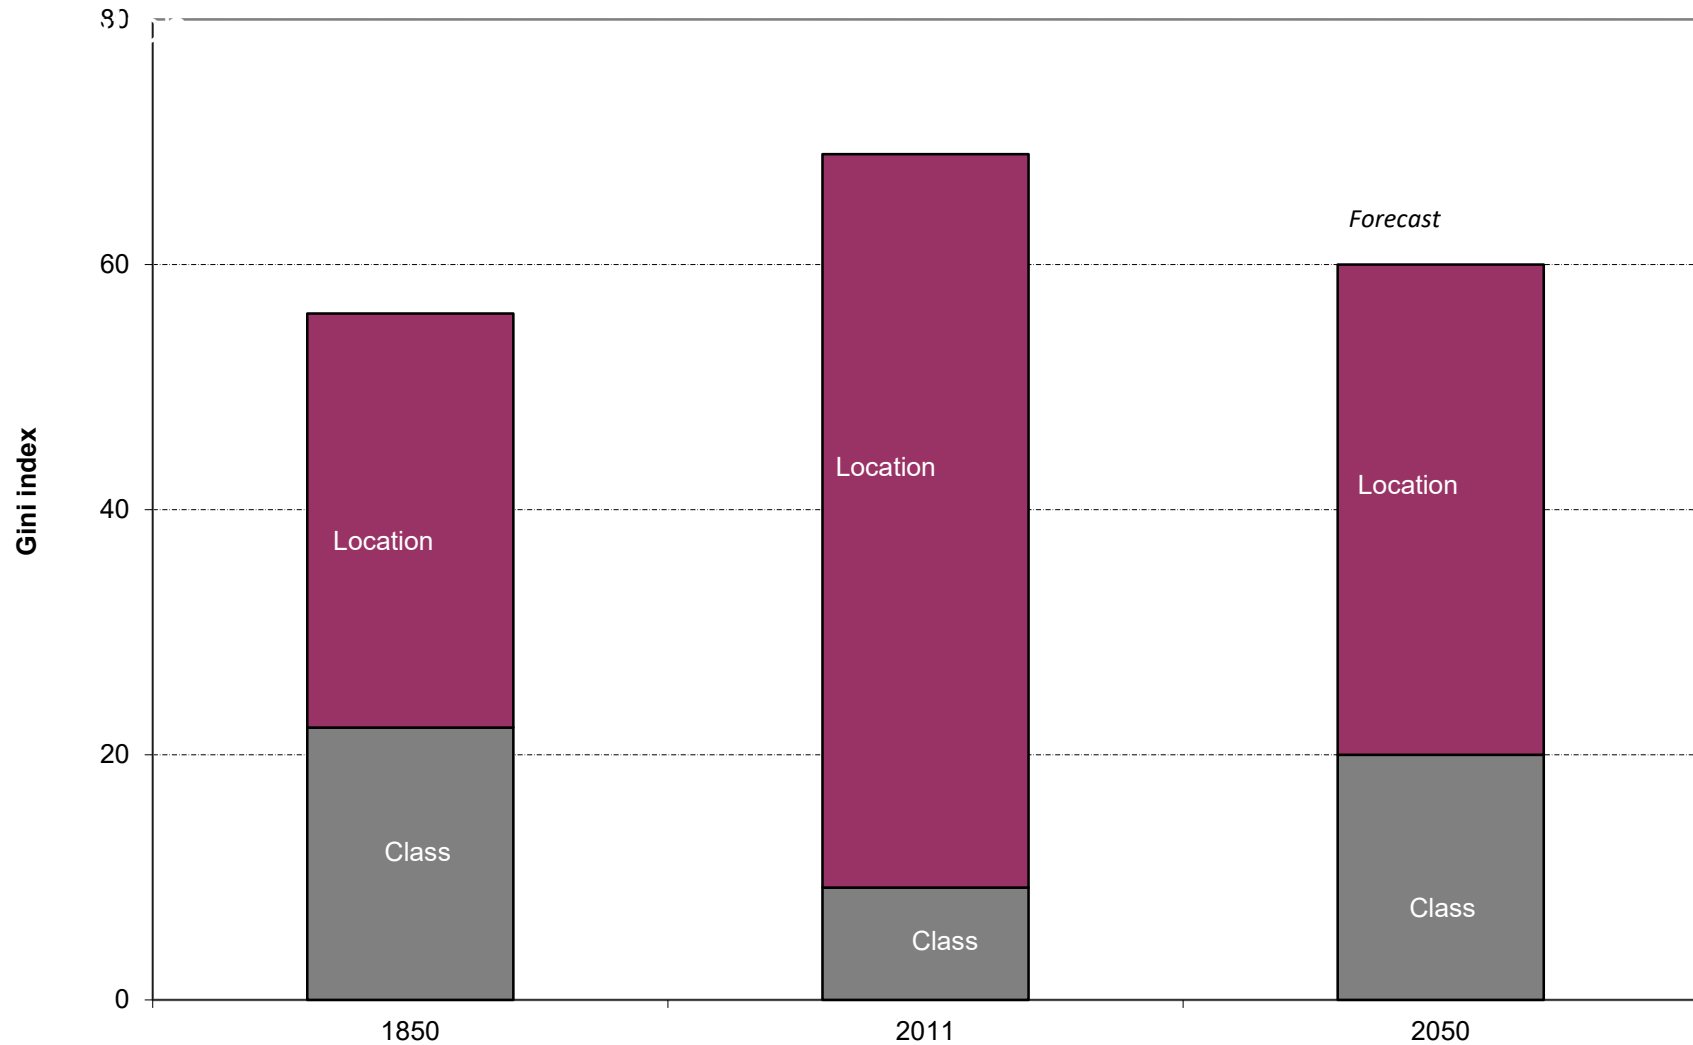

Long run

Estimated global income inequality over the past two centuries, 1820-2013 (using 2011 PPPs)

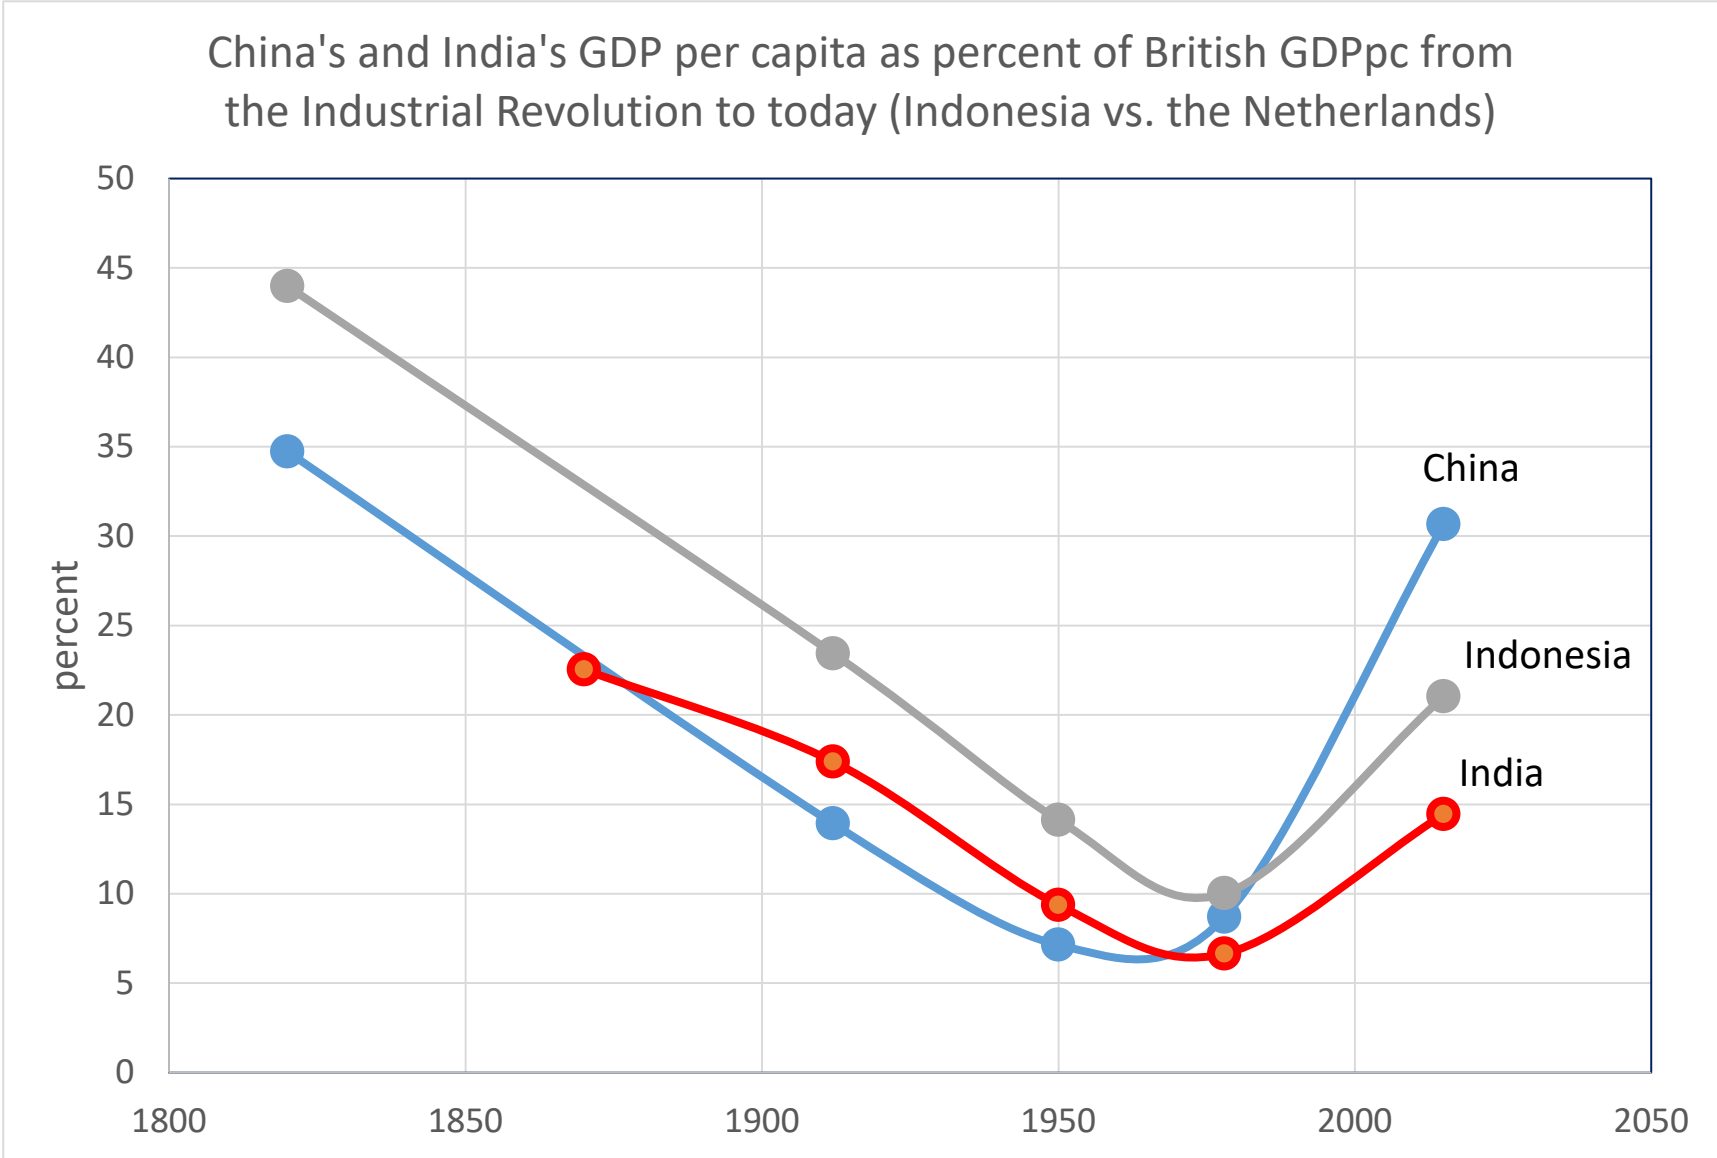

1820-1980 recalculation of Bourguignon-Morrisson; 1992-2013: Lakner and Milanovic with extensions

La longue durée: From Karl Marx to Frantz Fanon and back to Marx?

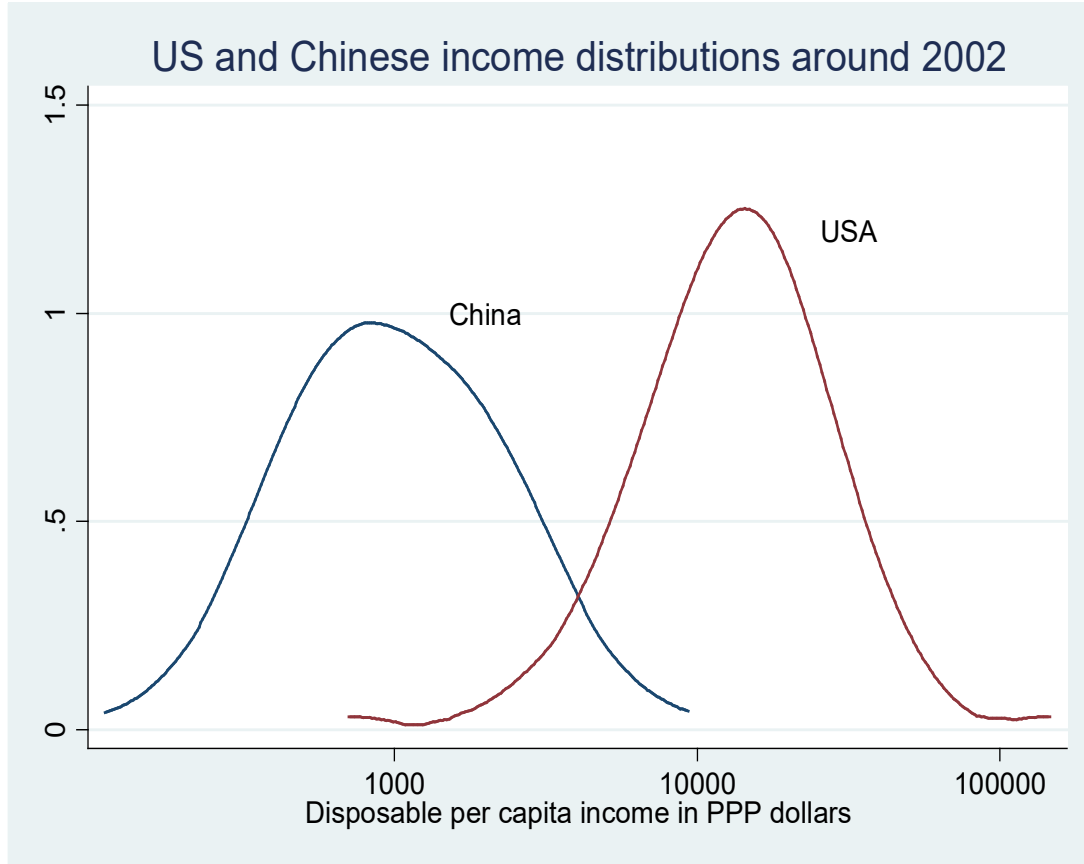

“Conditions common to them all and independent of each individual”
Marx, The German Ideology

Resurgent Asia

Going beyond the averages: Convergence of Chinese incomes

23% of Chinese population within US income range

70% of Chinese population within US income range

- In the *long-run* inequality is determined by the spread of the technological revolutions: the West in the 19th century, Asia today
- In the *medium-run* global inequality is determined by:
- What happens to within-country income distributions?
- Is there a catching up of poor countries?
- Are mean incomes of populous & large countries (China, India) growing faster or slower than the rich world?

Past twenty-five years in the world

The emergence of the “global middle/median class”

```
twoway (kdensity loginc_11_11 [w=popu] if loginc_11_11>2 & bin_year==1988, bwidth(0.14) title("Figure 3. Global income distribution in 1988 and 2011")) (kdensity loginc_11_11 [w=popu] if loginc_11_11>2 & bin_year==2011, bwidth(0.2)) , legend(off) xtitle(log of annual PPP real income) ytitle(density) text(0.78 2.5 "1988") text(0.65 3.5 "2011") xlabel(2.477"300" 3"1000" 3.477"3000" 4"10000" 4.699"50000", lsize(small) angle(90))

Branko Milanovic

There was no “elephant” in the previous (pre-globalization) period

Global political or philosophical implications

- Does global equality of opportunity matter? Is “citizenship rent” morally acceptable?
- What is the “optimal” global income distribution?
- Can something “good” (global middle class) be the result of something “bad” (shrinking of national middle classes and rising income inequality)? Are we back to Mandeville?

Position of national income percentiles in global distribution

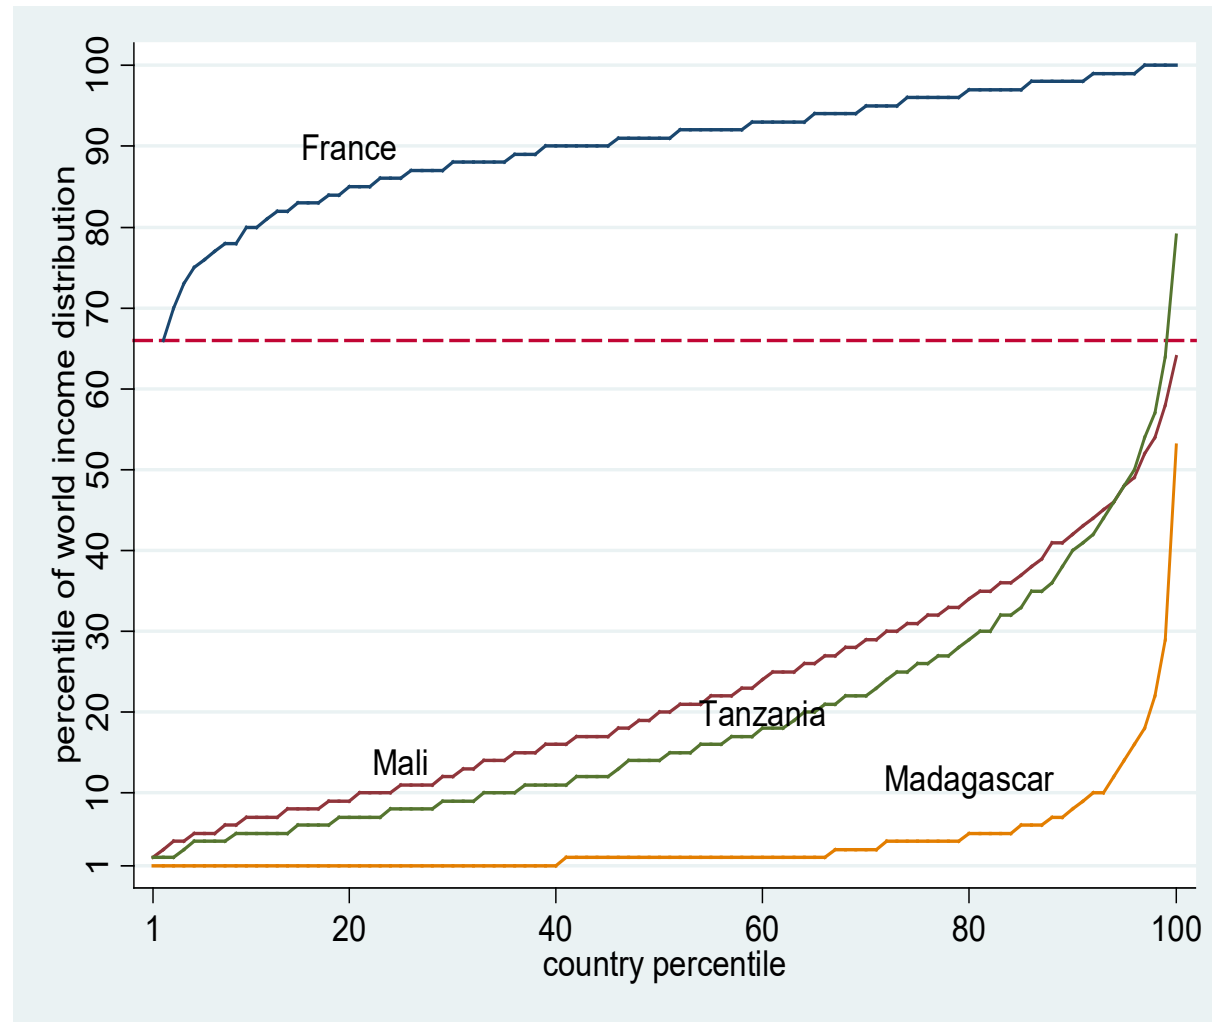

All countries with income data; year 2013; preliminary data (i.e. not a full sample of countries)

Quasi impossibility of having regressive transfers from very rich and egalitarian countries to very poor countries

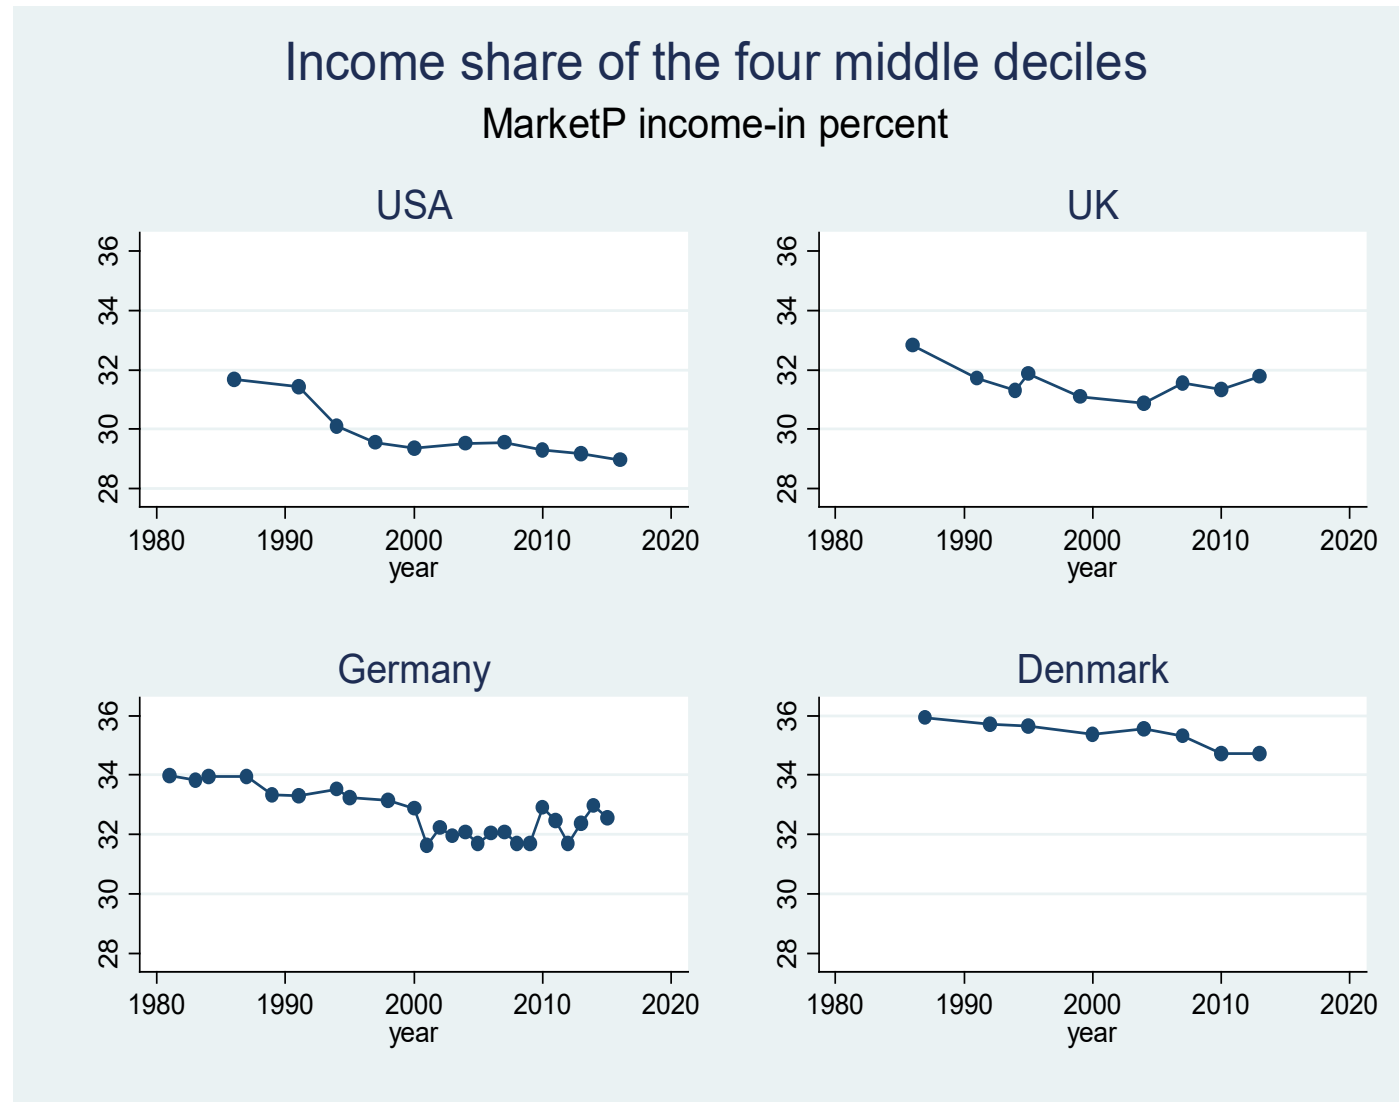

Quasi impossibility of having regressive transfers from very rich and egalitarian countries to very poor countries

The past twenty-five years in the rich world

Income stagnation and shrinkage in the size of the western middle classes

Percentage of population considered middle class in early 1980s and 2013

The middle class defined as population with income between +/-25% of national median income (all in per capita basis; disposable income; LIS data)

Redistribution in face of rising market income inequality

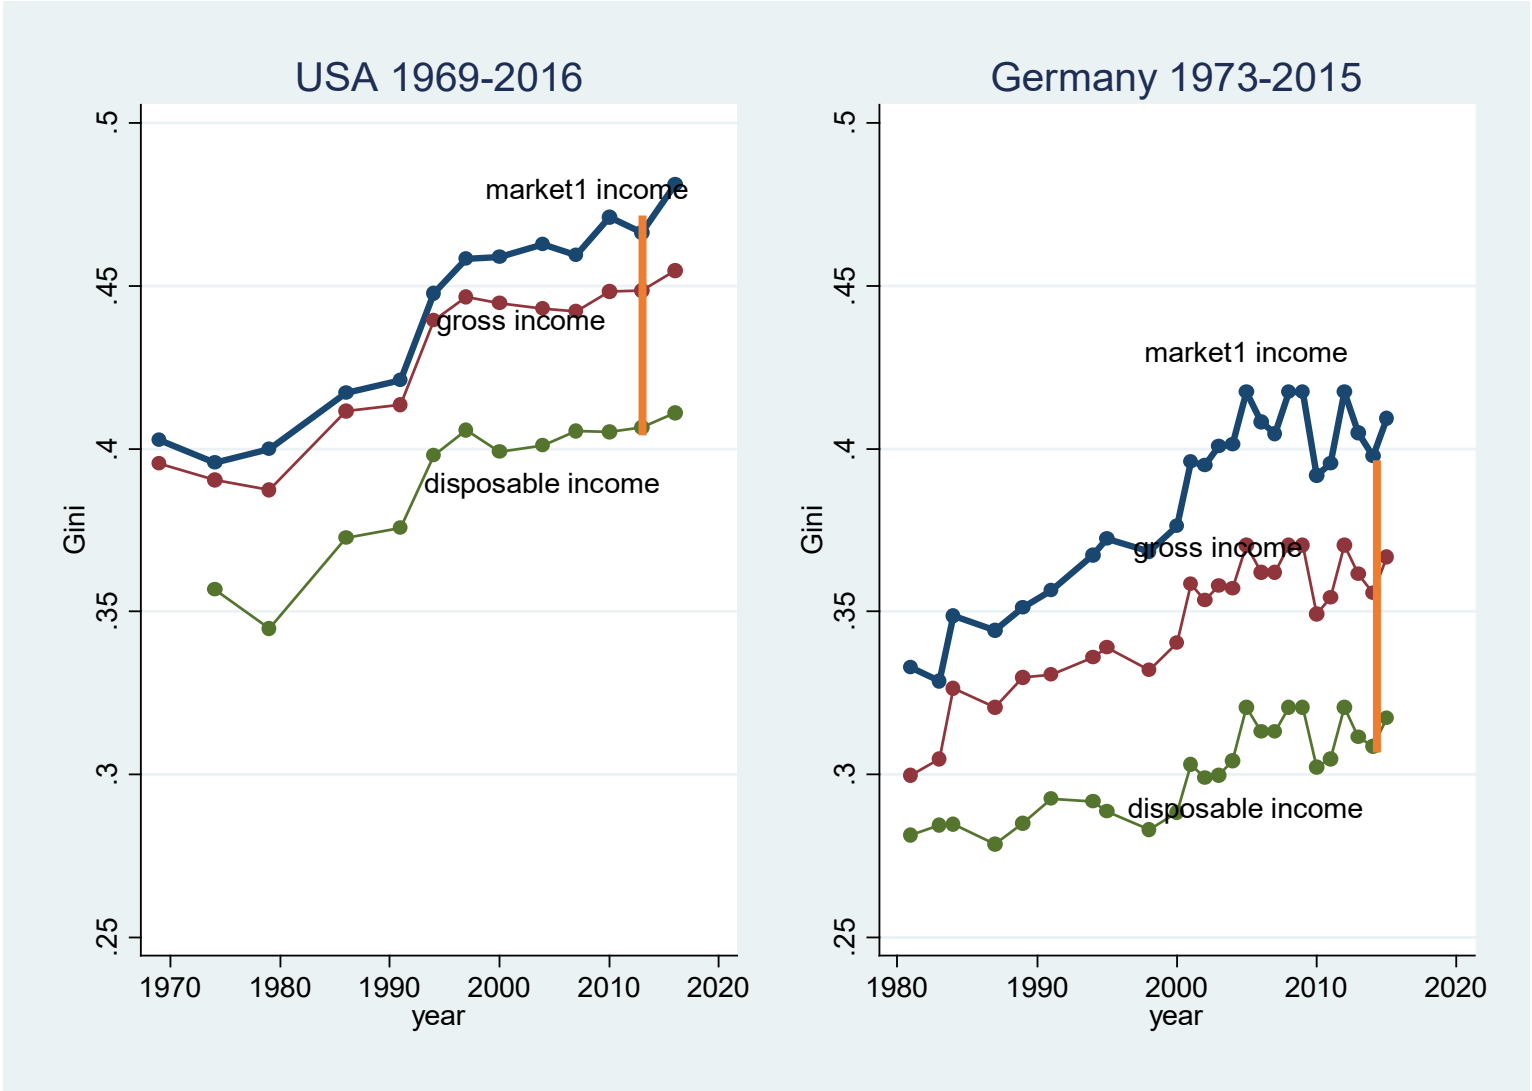

- It is neither globalization/technological change alone, nor is it only redistribution policy (taxes, transfers)
- Essentially, tax and transfer policy failed to counteract the rising market income inequality, coming probably from globalization, technological change, deregulation (which is indeed a policy), monopolization, reinforcement of the elite power, etc. (topic of my *Capitalism, alone*)

The headwinds of rising market (pre-redistribution) income inequality

Market ("factor") income and disposable household income, Gini, [non-elderly households](#) – change, approx. 1985 to approx. 2013

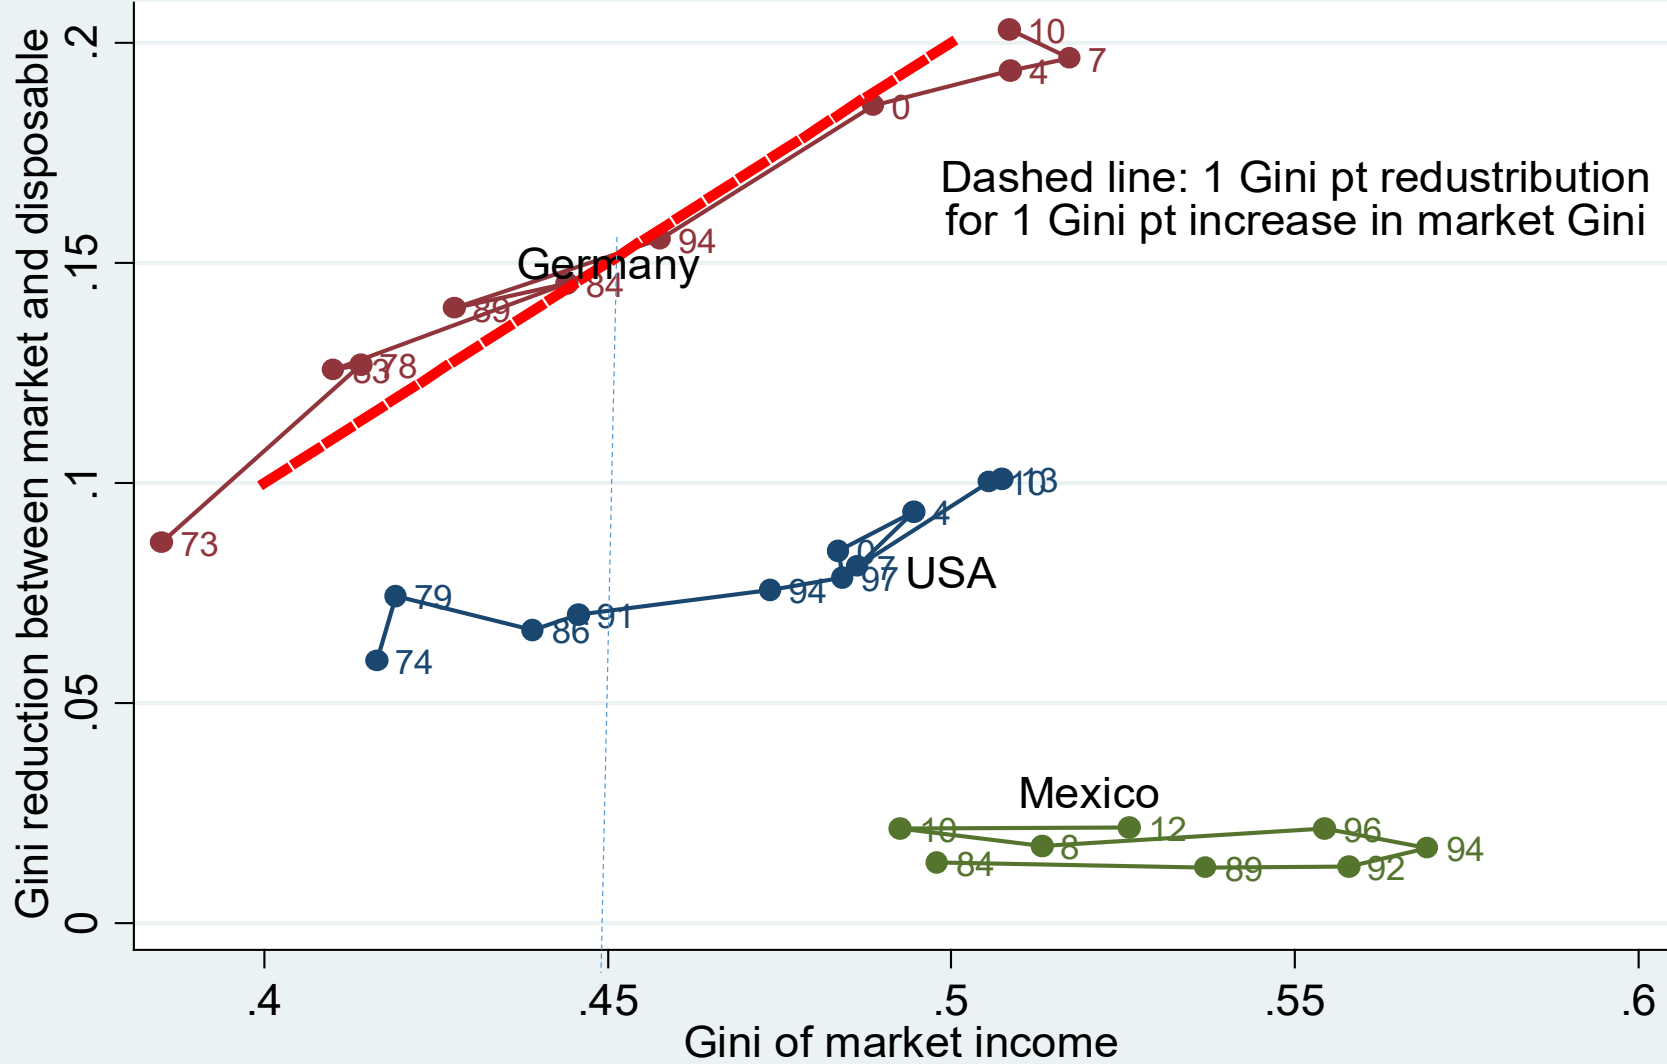

The role of economic policies in offsetting the increase in marketP income inequality

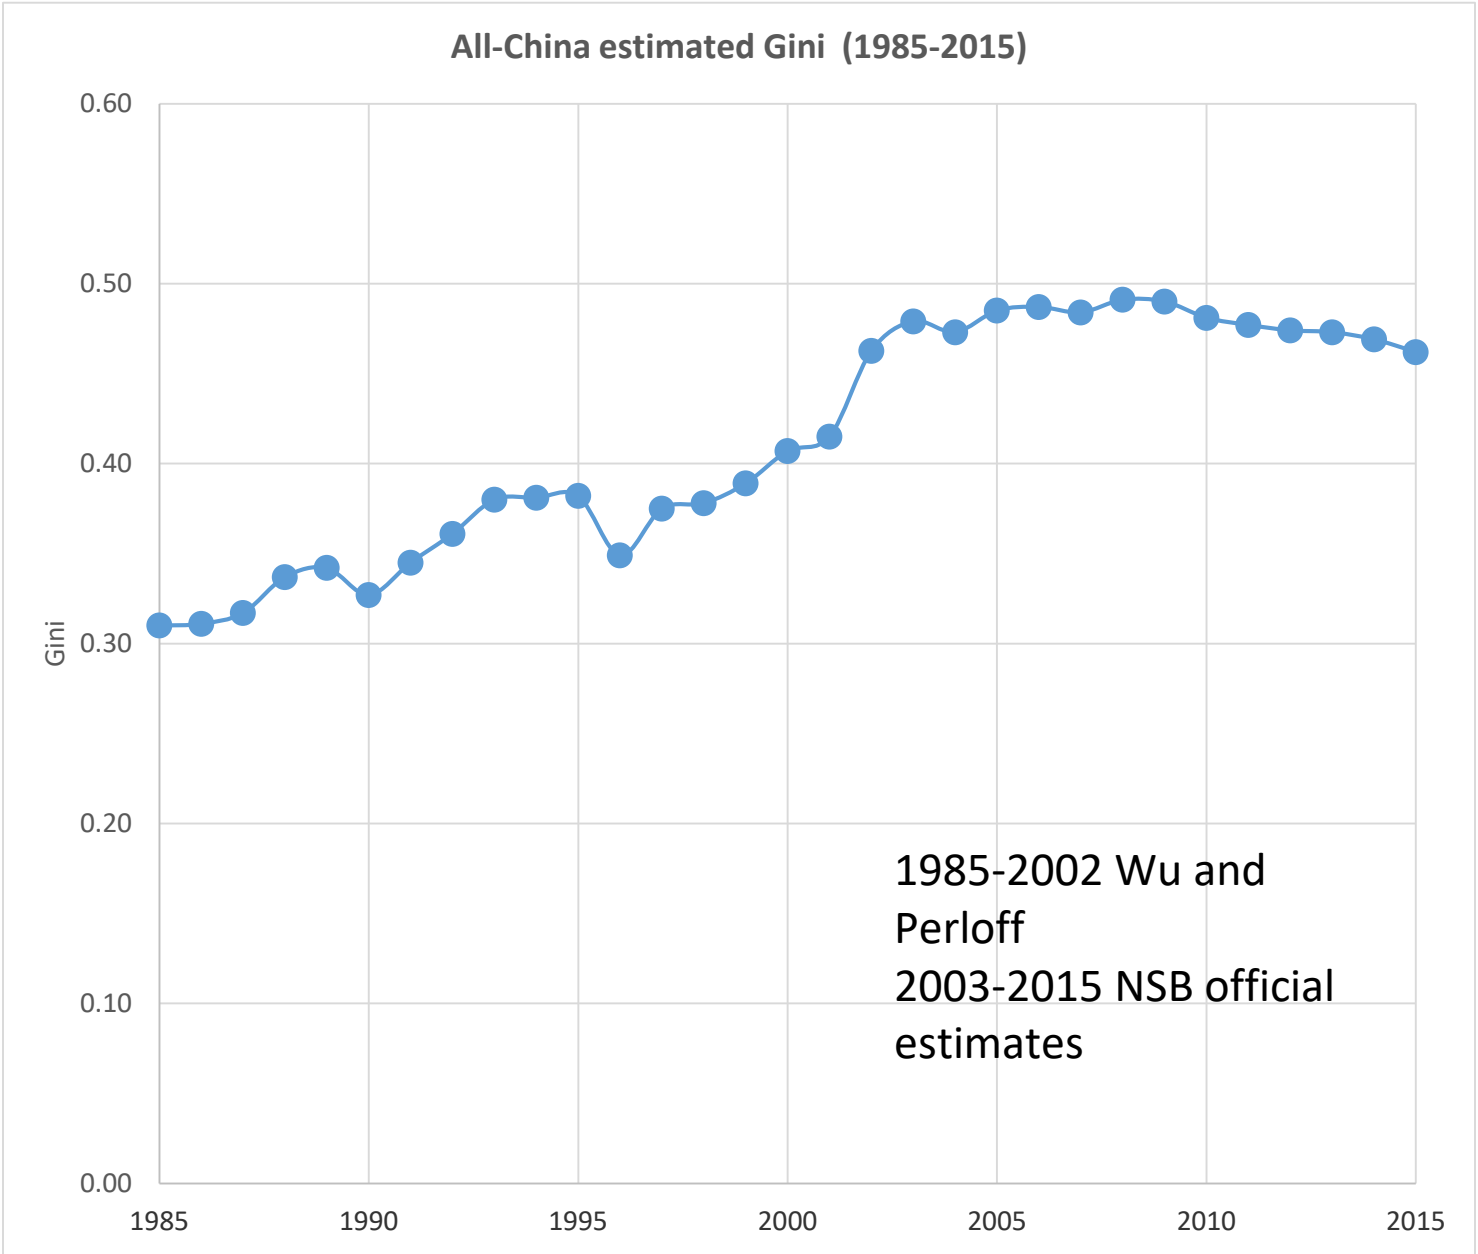

MarketP (or market1) income inclusive of state pensions (social security) considered as deferred wages. Calculated from LIS data

Market income inequality and redistribution

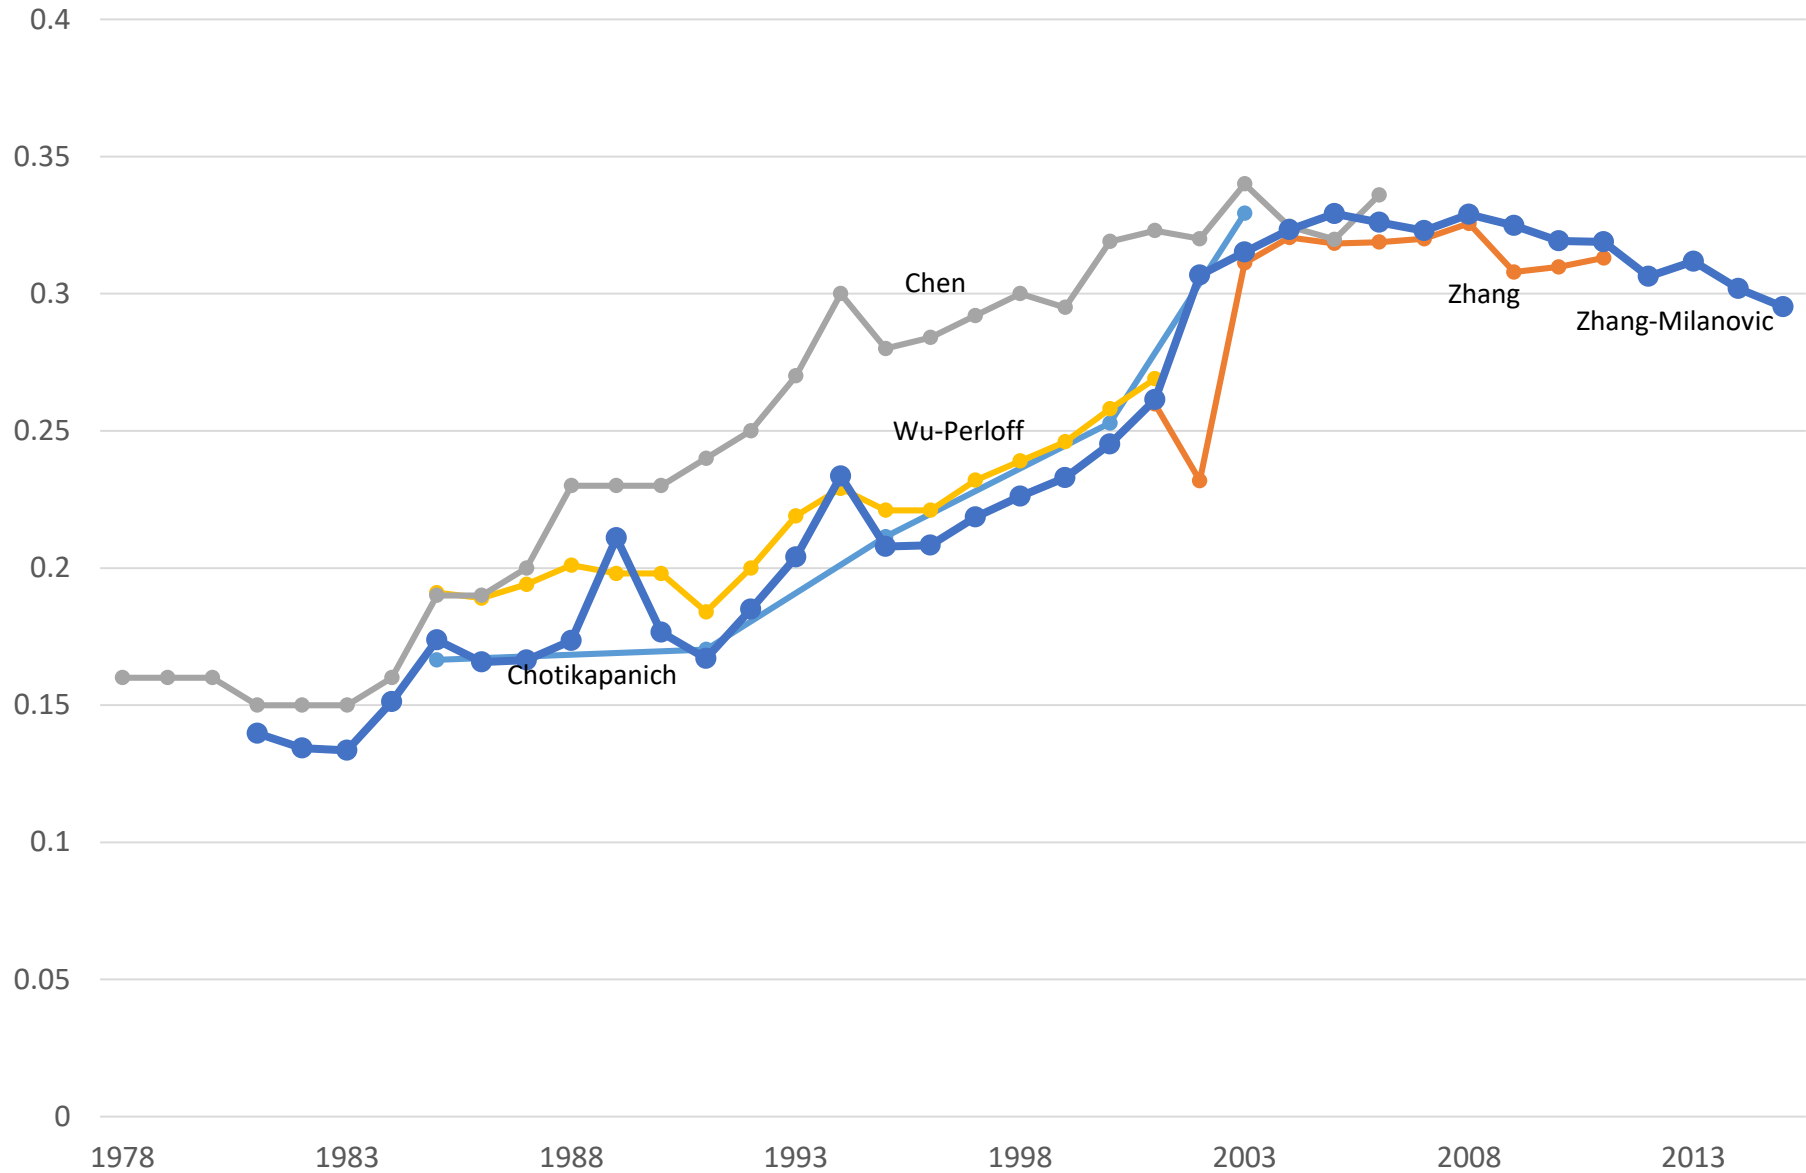

And in Asia

China

Urban Gini for China: different authors

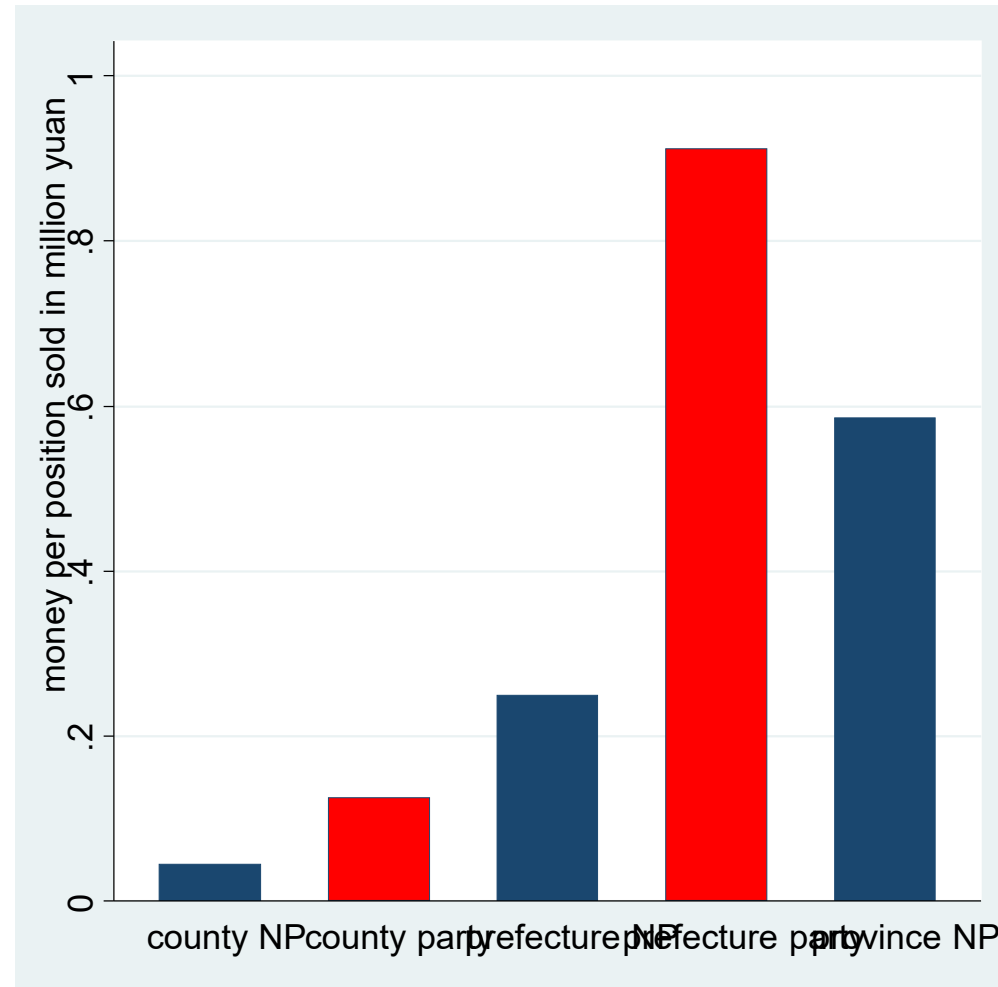

Inequality in China and the United States, 1950-2015

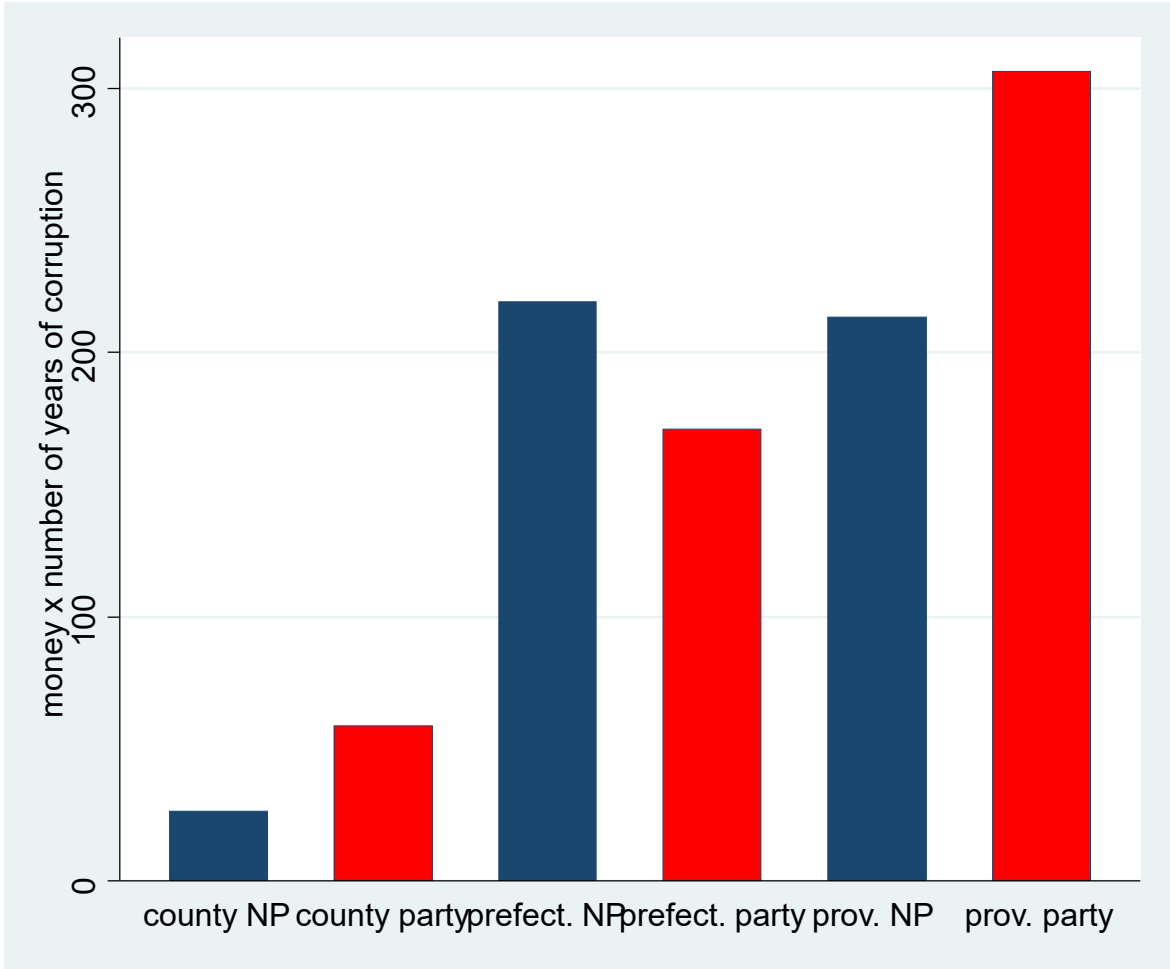

`twoway (scatter gini_LIS year if contcod=="USA", connect(l)) (scatter Giniall year if contcod=="CHN" & year>1960, connect(l))
legend(off) text(37 1978 "USA") text(32 1965 "CHN")) using All the Ginis`

Inequality and corruption

Money earned per position sold at different administrative levels (in million of current yuan)

Money x number of years of corruption involving multiple officials

Calculated from data in Minxin Pei "China's crony capitalism"; from corrupt.dta

India

Income inequality around year 2011 (household per capita income or NSS consumption)

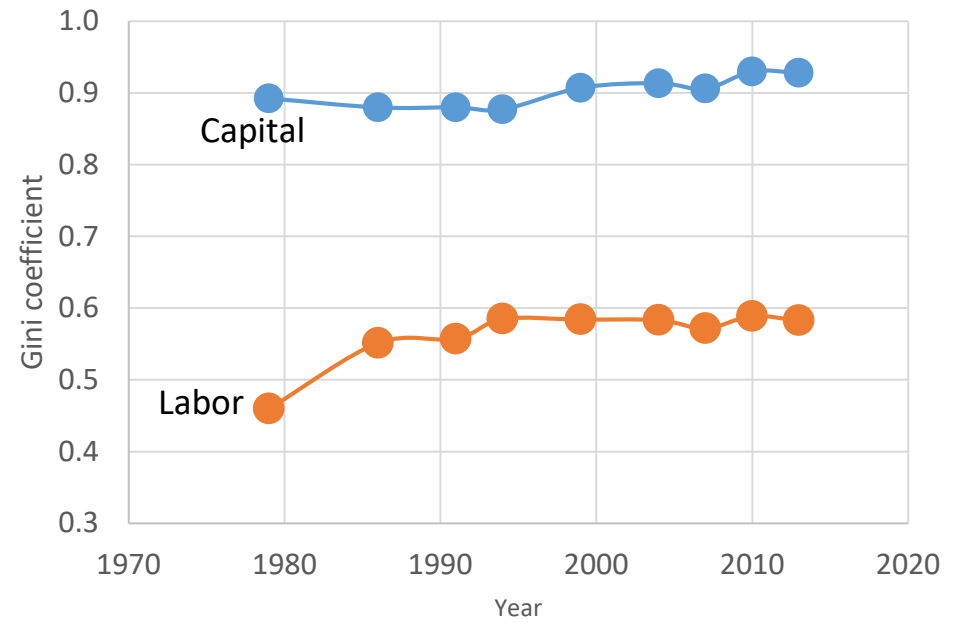

Ginis of capital and labor income and
quasi automatic transmission of rising capital
share into greater inter-personal inequality

USA, 1974-2016

UK, 1979-2013

Norway, 1979-2013

Germany, 1984-2015

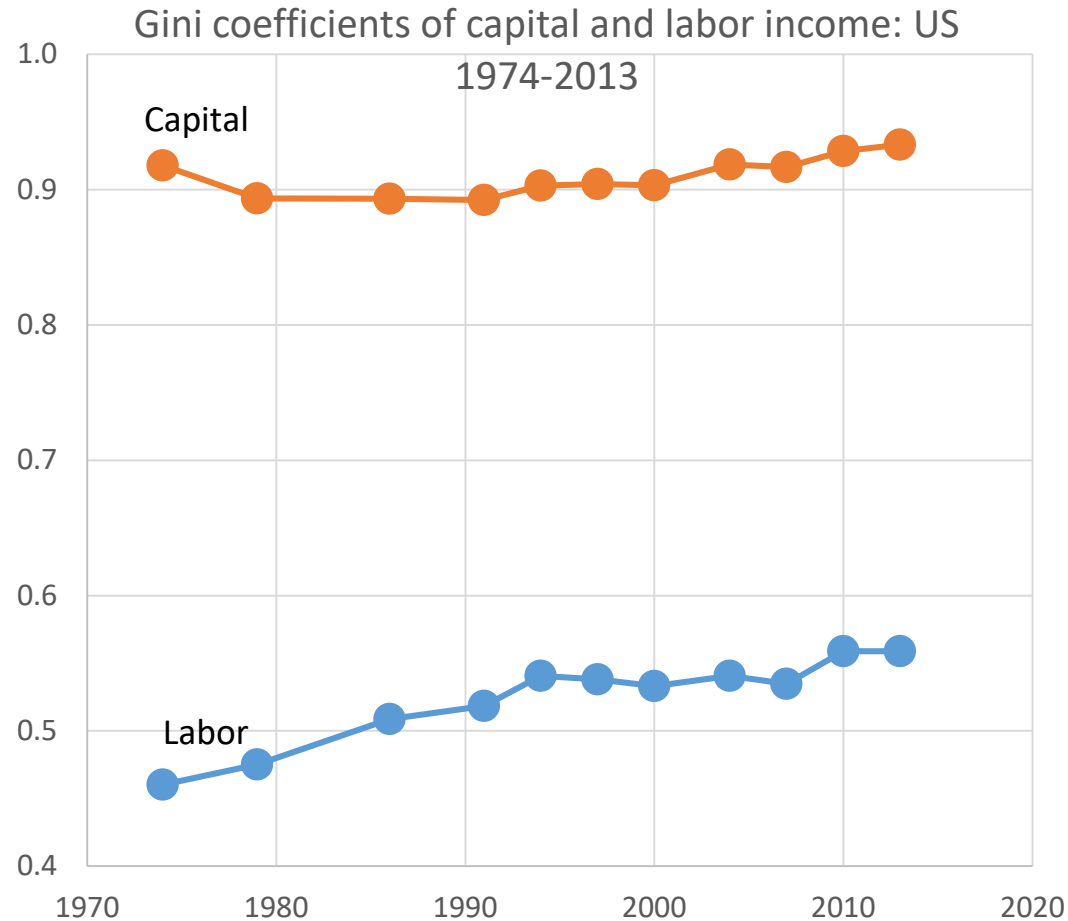

The end

5. Issues of justice and politics

1. Citizenship rent
2. Migration and national welfare state
3. Hollowing out of the rich countries' middle classes

Increased inequality of both labor and capital incomes

1. Is citizenship a rent?

- If between $\frac{2}{3}$ and $\frac{3}{4}$ of our lifetime income is determined by citizenship, then there is little equality of opportunity *globally* and citizenship is a rent (unrelated to individual desert, effort)
- Key issue: Is global equality of opportunity something that we ought to be concerned or not?
- Does national self-determination dispenses with the need to worry about GEO? Rawls' and statist's point.
- Migration is an attempt to “dilute” or share the rent/premium => implication for migration policies

2. Optimal global distribution: the Rawlsian world

- For Rawls, global optimum distribution of income is simply a sum of national optimal income distributions
- Why Rawlsian world will remain unequal?

Global inequality in Real World, Rawlsian World, Convergence World...and Shangri-La World (Theil 0; year 2011)

| Mean country incomes | All equal | Different (as now) |
|-----------------------------------|---|---|
| Individual incomes within country | | |
| All equal | 0 | 54 (all country Theils=0; all mean incomes as now) |
| Different (as now) | 23 (all mean incomes equalized; all country Ginis as now) | 77 |

3. Back to Mandeville

- Possible crowding out of national middle classes, and the creation of a global one
- But the middle class is presumably a force for stability when there is a political community. There is no political community at the global level. What does global middle class mean?
- Would global middle class create a global polity?
- Or, global plutocracy: in the longer-term, reversal to the pre World War I situation
- Can something that is bad nationally (increased inequality) be good globally (decreased inequality)?
- **Can national vices produce global virtue?**

Extras

(another) Trilemma of globalization

- You cannot have (A) large differences in mean country incomes, (B) globalization and (C) no structural migration.
- If A + B as today then migration.
- If A + C then no globalization.
- If B + C then you have to have homogeneous countries like EU15.
- EU, because of significant East-West and North-South income differences is, in a very modest way, a replica of the world
- EU migration problems stem from moving, as result of enlargement, from the situation (B+C) to (B+A) => Brexit

Trade-off between citizenship rights and extent of migration

* People who would like to migrate according to a world-wide Gallup poll

Why tools from the 20th century will not work?

- Education in quantitative sense will have much less of a “bang for a buck” and will not by itself reduce the skill premium
- Trade unions are on the decline because the nature of work, in service-oriented and globalized economy has changes
- Increases in taxation of current income are unlikely because the trust in the government is less
- New transfers cannot be financed; aging of the population and anti-migrant feelings further limit what can be done
- And one unlikely danger: more meritocratic capitalism where top wage earners are also top K earners (and the reverse)

What could possibly be done?

- Improved quality of education and [much easier access to education](#) for all—that is, investing for stronger public education rather than the opposite trend of ever stronger private education
- [Deconcentration of ownership and income from capital](#) through the use of tax incentives; a long and arduous process
- Employee-stock ownership plans
- Higher taxation of inheritance (not current income)
- Change in the rules re. financing of political campaigns (especially in the United States)

Ok, what are the messages?

- Maintain globalization, but do not expect that it will help everybody
- Improve domestic redistribution precisely because globalization is not good for all
- Expect that the shift of relative economic power to Asia will continue
- Improve quality and access to education
- Broaden ownership of capital
- Tax inheritance
- Do not “kill” migration but make it politically more palatable (by reducing migrants’ rights)
- Realize that Europe is also part of the Greater Middle East
- Reform the funding of political parties and elections
