

PROGRAMME FOR INTERNATIONAL STUDENT ASSESSMENT (PISA) RESULTS FROM PISA 2018

The Programme for International Student Assessment (PISA) is a triennial survey of 15-year-old students that assesses the extent to which they have acquired the key knowledge and skills essential for full participation in society. The assessment focuses on proficiency in reading, mathematics, science and an innovative domain (in 2018, the innovative domain was global competence), and on students' well-being.

Netherlands

What 15-year-old students in Netherlands know and can do

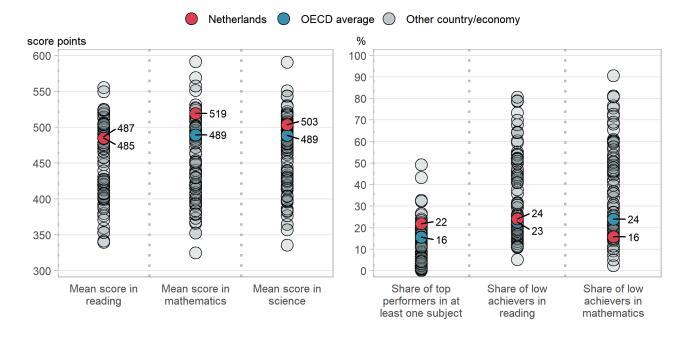

Figure 1. Snapshot of performance in reading, mathematics and science

Note: Only countries and economies with available data are shown. Source: OECD, PISA 2018 Database, Tables I.1 and I.10.1.

- Students in Netherlands scored not significantly different from the OECD average in reading, higher than the OECD average in mathematics, and higher than the OECD average in science.
- Compared to the OECD average, a larger proportion of students in Netherlands performed at the highest levels of proficiency (Level 5 or 6) in at least one subject; at the same time a larger proportion of students achieved a minimum level of proficiency (Level 2 or higher) in at least one subject.

What students know and can do in reading

- In Netherlands, 76% of students attained at least Level 2 proficiency in reading (OECD average: 77%). At a minimum, these students can identify the main idea in a text of moderate length, find information based on explicit, though sometimes complex criteria, and can reflect on the purpose and form of texts when explicitly directed to do so.
- Some 9% of students in Netherlands were top performers in reading, meaning that they attained Level 5 or 6 in the PISA reading test (OECD average: 9%). At these levels, students can comprehend lengthy texts, deal with concepts that are abstract or counterintuitive, and establish distinctions between fact and opinion, based on implicit cues pertaining to the content or source of the information. In 20 education systems, including those of 15 OECD countries, more than 10% of 15-year-old students were top performers.

What students know and can do in mathematics

- Some 84% of students in Netherlands attained Level 2 or higher in mathematics (OECD average: 76%). At a minimum, these students can interpret and recognise, without direct instructions, how a (simple) situation can be represented mathematically (e.g. comparing the total distance across two alternative routes, or converting prices into a different currency). The share of 15-year-old students who attained minimum levels of proficiency in mathematics (Level 2 or higher) varied widely from 98% in Beijing, Shanghai, Jiangsu and Zhejiang (China) to 2% in Zambia, which participated in the PISA for Development assessment in 2017. On average across OECD countries, 76% of students attained at least Level 2 proficiency in mathematics.
- In Netherlands, 18% of students scored at Level 5 or higher in mathematics (OECD average: 11%). Six Asian countries and economies had the largest shares of students who did so: Beijing, Shanghai, Jiangsu and Zhejiang (China) (44%), Singapore (37%), Hong Kong (China) (29%), Macao (China) (28%), Chinese Taipei (23%) and Korea (21%). These students can model complex situations mathematically, and can select, compare and evaluate appropriate problem-solving strategies for dealing with them.

What students know and can do in science

- Some 80% of students in Netherlands attained Level 2 or higher in science (OECD average: 78%). At a minimum, these students can recognise the correct explanation for familiar scientific phenomena and can use such knowledge to identify, in simple cases, whether a conclusion is valid based on the data provided.
- In Netherlands, 11% of students were top performers in science, meaning that they were proficient at Level 5 or 6 (OECD average: 7%). These students can creatively and autonomously apply their knowledge of and about science to a wide variety of situations, including unfamiliar ones.

Performance trends

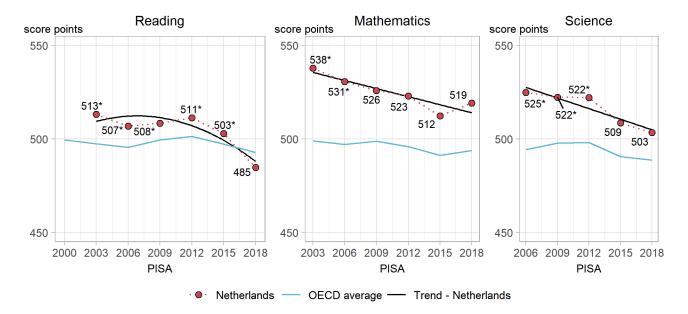

Figure 2. Trends in performance in reading, mathematics and science

Notes:*indicates mean-performance estimates that are statistically significantly above or below PISA 2018 estimates for Netherlands. The blue line indicates the average mean performance across OECD countries with valid data in all PISA assessments. The red dotted line indicates mean performance in Netherlands. The black line represents a trend line for Netherlands (line of best fit). Source: OECD, PISA 2018 Database, Tables I. B1.10, I. B1.11 and I. B1.12.

In the Netherlands, mean performance in reading in 2018 was below the level observed in any previous assessment, while mean performance in mathematics and science remained closer to the level observed in 2015. However, when considering all comparable assessments, the long-term trajectory was clearly negative in mathematics and science too. In reading, no decline was observed amongst the highest-performing students, but rapid declines were observed amongst the lowest-achieving students; in science, performance declined amongst the highest-achieving students too, but more so amongst the lowest-achieving students. In mathematics, trends were similar across high- and low-achieving students. The proportion of students scoring at Level 5 or 6 in PISA remained stable in all three subjects, compared to the last assessment in which each subject was the major focus. However, the proportion of students scoring below Level 2 grew by almost 10 percentage points in reading (compared to 2009) and by seven percentage points in science (compared to 2006).

Where All Students Can Succeed

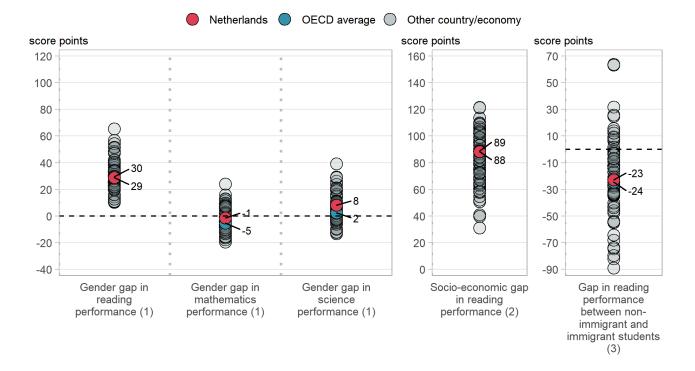

Figure 3. Differences in performance related to personal characteristics

Notes: Only countries and economies with available data are shown. (1) Girls' minus boys' performance; (2) Advantaged minus disadvantaged students' performance; (3) Immigrants' minus non-immigrants' performance in reading; After accounting for students' and schools' socio-economic profile.

Source: OECD, PISA 2018 Database, Tables II.B1.2.3, II.B1.7.1, II.B1.7.3, II.B1.7.5 and II.B1.9.3.

Equity related to socio-economic status

- In Netherlands, socio-economically advantaged students outperformed disadvantaged students in reading by 88 score points in PISA 2018. This is not significantly different from the average difference between the two groups (89 score points) across OECD countries. In PISA 2009, the performance gap related to socio-economic status was 79 score points in Netherlands (and 87 score points on average across OECD countries).
- Some 19% of advantaged students in Netherlands, but 3% of disadvantaged students, were top performers in reading in PISA 2018. On average across OECD countries, 17% of advantaged students, and 3% of disadvantaged students, were top performers in reading.
- Socio-economic status was a strong predictor of performance in mathematics and science in all PISA participating countries. It explained 14% of the variation in mathematics performance in PISA 2018 in Netherlands (compared to 14% on average across OECD countries), and 13% of the variation in science performance (compared to the OECD average of 13% of the variation).
- Some 13% of disadvantaged students in Netherlands were able to score in the top quarter of reading
 performance within Netherlands, indicating that disadvantage is not destiny. On average across OECD
 countries, 11% of disadvantaged students scored amongst the highest performers in reading in their
 countries.
- In Netherlands, low- and high-performing students are clustered in the same schools more often than the OECD average.

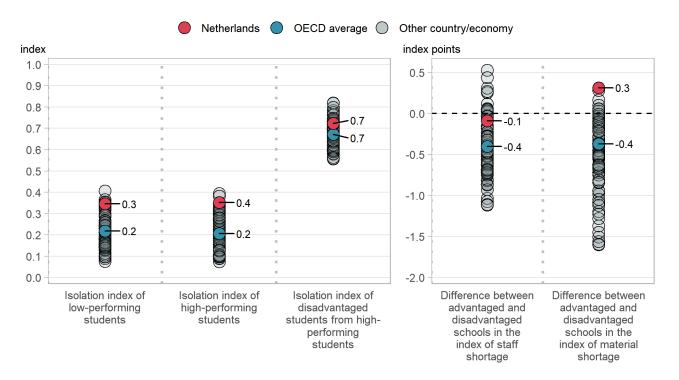

Figure 4. School segregation, and gap in material and staff shortage between advantaged and disadvantaged schools

Notes: Only countries and economies with available data are shown. The isolation indices ranging from 0 (no segregation) to 1 (full segregation) measure whether low-/high-performing students or disadvantaged students are more or less concentrated in some schools. See detailed description of the indices in Volume II Chapter 4.

Source: OECD, PISA 2018 Database, Tables II.B1.4.1, II.B1.4.8, II.B1.5.13 and II.B1.5.14.

- School principals in Netherlands reported a similar level of staff shortage and less material shortage than the OECD average; but there was no significant difference in staff shortages between advantaged and disadvantaged schools. In Netherlands, 42% of students enrolled in a disadvantaged school and 25% of students enrolled in an advantaged school attend a school whose principal reported that the capacity of the school to provide instruction is hindered at least to some extent by a lack of teaching staff. On average across OECD countries, 34% of students in disadvantaged schools and 18% of students in advantaged schools attend such a school.
- According to school principals in Netherlands, 93% of teachers in advantaged schools and 87% of teachers in disadvantaged schools are "fully certified" (the difference is not statistically significant). The proportions of teachers with at least a master's degree are larger in advantaged schools than in disadvantaged schools.
- Many students, especially disadvantaged students, hold lower ambitions than would be expected given their academic achievement. In Netherlands, about one in four high-achieving disadvantaged students

 but about one in ten high-achieving advantaged students – do not expect to complete tertiary education.

Equity related to gender

 In all countries and economies that participated in PISA 2018, girls significantly outperformed boys in reading – by 30 score points on average across OECD countries. In Netherlands, the gender gap in reading (29 score points) was not significantly different from the average gap. The gap was similar to that observed in 2009 (24 score points), and both boys' and girls' performance remained stable over the period.

- In Netherlands, girls scored similar to boys in mathematics. Across OECD countries, boys
 outperformed girls by five score points. While girls slightly outperformed boys in science (by two score
 points) on average across OECD countries in PISA 2018, in Netherlands girls outperformed boys in
 science by eight score points.
- Amongst high-performing students in mathematics or science, about one in five boys in Netherlands expect to work as an engineer or science professional at the age of 30, while fewer than one in ten girls expects to do so. About three in ten high-performing girls expect to work in health-related professions, while about one in ten high-performing boys expects to do so. Some 7% of boys and a negligible percentage of girls in Netherlands expect to work in ICT-related professions.

Equity related to immigrant background

- In 2018, some 14% of students in Netherlands had an immigrant background. Amongst these immigrant students, about one in two was socio-economically disadvantaged.
- The average difference in reading performance between immigrant and non-immigrant students in Netherlands was 72 score points in favour of non-immigrant students. After accounting for students' and schools' socio-economic profile the difference shrank to 23 score points.
- On average across OECD countries, 17% of them scored in the top quarter of reading performance in 2018. In Netherlands, 9% of immigrant students performed at that level.

What School Life Means for Students' Lives

How is the school climate in Netherlands?

- In Netherlands, 12% of students reported being bullied at least a few times a month, compared to 23% on average across OECD countries. At the same time, 91% of students in Netherlands (and 88% of students on average across OECD countries) agreed or strongly agreed that it is a good thing to help students who cannot defend themselves.
- Some 34% of students in Netherlands (OECD average: 26%) reported that, in every or most languageof-instruction lessons, their teacher has to wait a long time for students to quiet down. In Netherlands, students who reported that, in every or most lessons, the teacher has to wait a long time for students to quiet down scored 18 score points lower in reading than students who reported that this never happens or happens only in some lessons, after accounting for socio-economic status.
- On average across OECD countries, 21% of students had skipped a day of school and 48% of students had arrived late for school in the two weeks prior to the PISA test. In Netherlands, 7% of students had skipped a day of school and 49% of students had arrived late for school during that period. In most countries and economies, frequently bullied students were more likely to have skipped school, whereas students who valued school, enjoyed a better disciplinary climate and received greater emotional support from parents were less likely to have skipped school.

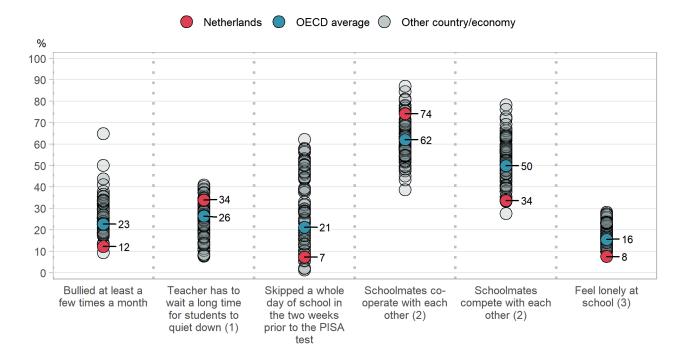

Figure 5. School climate

Notes: Only countries and economies with available data are shown. (1) In every or most language-of-instruction lessons; (2) Very or extremely true; (3) Agreed or strongly agreed.

Source: OECD, PISA 2018 Database, Tables III.B1.2.1, III.B1.3.1, III.B1.4.1, III.B1.8.1, III.B1.8.2 and III.B1.9.1

 Some 69% of students in Netherlands (OECD average: 74%) agreed or strongly agreed that their teacher shows enjoyment in teaching. In most countries and economies, including in Netherlands, students scored higher in reading when they perceived their teacher as more enthusiastic, especially when students said their teachers are interested in the subject.

- In Netherlands, 74% of students reported that their schoolmates co-operate with each other (OECD average: 62%) and 34% reported that they compete with each other (OECD average: 50%).
- Some 8% of students in Netherlands (OECD average: 16%) agreed or strongly agreed that they feel lonely at school.

How do students in Netherlands feel about their lives and learning?

- In Netherlands, 79% of students (OECD average: 67%) reported that they are satisfied with their lives (students who reported between 7 and 10 on the 10-point life-satisfaction scale).
- Some 97% of students in Netherlands reported sometimes or always feeling happy and about 3% of students reported always feeling sad. In most countries and economies, students were more likely to report positive feelings when they reported a stronger sense of belonging at school and greater student co-operation, and were more likely to express sadness when they were bullied more frequently.
- In Netherlands, 88% of students agreed or strongly agreed that they can usually find a way out of difficult situations (OECD average: 84%), and 45% agreed or strongly agreed that, when they fail, they worry about what others think of them (OECD average: 56% of students). In almost every education system, including Netherlands, girls expressed greater fear of failure than boys, and this gender gap was considerably wider amongst top-performing students.
- A majority of students across OECD countries holds a growth mindset (they disagreed or strongly disagreed with the statement "Your intelligence is something about you that you can't change very much"). In Netherlands, 51% of students hold a growth mindset.

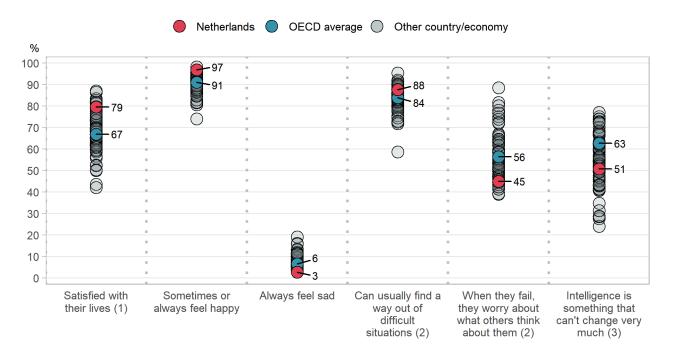

Figure 6. Student well-being and growth mindset

Notes: Only countries and economies with available data are shown. (1) Between 7 and 10 on the life-satisfaction scale; (2) Agreed or strongly agreed; (3) Disagreed or strongly disagreed.

Source: OECD, PISA 2018 Database, Tables III.B1.11.1, III.B1.12.1, III.B1.12.2, III.B1.13.1, III.B1.13.2 and III.B1.14.1

Key features of PISA 2018

The content

 The PISA 2018 survey focused on reading, with mathematics, science and global competence as minor areas of assessment; Netherlands did not participate in the assessment of global competence. PISA 2018 also included an assessment of young people's financial literacy, which was optional for countries and economies. Results for reading, mathematics and science are released on 3 December 2019 and results for global competence and financial literacy in 2020.

The students

 Some 600 000 students completed the assessment in 2018, representing about 32 million 15-yearolds in the schools of the 79 participating countries and economies. In Netherlands, 4 765 students, in 175 schools, completed the assessment, representing 190 281 15-year-old students (91% of the total population of 15-year-olds).

The assessment

- Computer-based tests were used in most countries, with assessments lasting a total of two hours. In reading, a multi-stage adaptive approach was applied in computer -based tests whereby students were assigned a block of test items based on their performance in preceding blocks.
- Test items were a mixture of multiple-choice questions and questions requiring students to construct their own responses. The items were organised into groups based on a passage of text describing a real-life situation. More than 15 hours of test items for reading, mathematics, science and global competence were covered, with different students taking different combinations of test items.
- Students also answered a background questionnaire, which took about 35 minutes to complete. The questionnaire sought information about the students themselves, their attitudes, dispositions and beliefs, their homes, and their school and learning experiences. School principals completed a questionnaire that covered school management and organisation, and the learning environment.
- Some countries/economies also distributed additional questionnaires to elicit more information. These
 included: in 19 countries/economies, a questionnaire for teachers asking about themselves and their
 teaching practices; and in 17 countries/economies, a questionnaire for parents asking them to provide
 information about their perceptions of and involvement in their child's school and learning.
- Countries/economies could also chose to distribute three other optional questionnaires for students: 52 countries/economies distributed a questionnaire about students' familiarity with computers; 32 countries/economies distributed a questionnaire about students' expectations for further education; and 9 countries/economies distributed a questionnaire, developed for PISA 2018, about students' wellbeing.
