

Growth mindset online workshop

2 September 2021, 15:30-18:30 (CEST), Zoom

The Organisation for Economic Co-operation and Development (OECD) is organising the second online workshop on **the global future of growth mindset research in education** on 2 September 2021 (15:30-18:30 CEST).

The first workshop, held in September 2020, focused on data from both randomised trials and the PISA 2018 assessment of some 600 000 students. The research showed that students' growth mindsets had a meaningful relation with their learning and well-being in many countries/economies around the globe—especially for students from underserved groups. These conclusions were supported by further analyses of the PISA 2018 data and released in April 2021 in the OECD report titled: [Sky's the limit](#).

The research also showed that the effects of a growth mindset often depended on a classroom culture that supported the students' growth mindset beliefs and behaviours. This second workshop, therefore, addresses the critical question: How can we support the development of growth mindset classroom cultures? For example, what are key teacher practices, how are they best taught, and how can we best assess their implementation and impact on student outcomes? This workshop will engage the academic, practitioner and policy communities in discussions of these critical questions to lay the groundwork for a new research initiative and for global collaborations in the future.

This workshop will review the latest evidence about growth mindset classroom cultures, identifying the highest priority scientific questions for a future research agenda. The workshop will be open to the public and involve Q&A with the researchers.

Register via [this link](#) for Day 1 **by 30 August 2021** to ensure your place at this event.

For further information, contact Thomas Marwood (thomas.marwood@oecd.org).

An agenda will be circulated to participants at a later date.

The event is organised in partnership with the Yidan Prize Foundation.
