Biographies

Dr Lianguo LUO is a Professor of IEDA/CAAS. His research interests include design of agricultural environmental scheme; incentive for promoting cleaner production in Agriculture like Payment for Environment Service (PES), subsidy and compensation policies with environment-friendly technologies practices; the evaluation on economic, social and ecological efficiency for clean technologies applied in agriculture; and the control and ecological restore of agricultural non-point pollution.

Title

The Chinese approach to rural development via rural revitalization strategy

Summary

In the new era of socialism with Chinese characteristics, in order to solve the contradiction between the peoples growing need for a better life and the unbalanced and insufficient development, the strategy of rural vitalization was first proposed as one of the major aspects of developing a modernized economy in a report delivered to the 19th CPC National Congress. China cannot become modernized without modernizing its agricultural and rural area. By revitalizing the countryside, we can achieve strong agriculture, a beautiful countryside and well-off farmers, ensure food security, increase farmers income and promote green development of agriculture. Rural development is the ballast stone for the stable development of national economy and society.
