

Ministry of Health, Welfare and Sport

National Electronic Health Record and EPSOS

**Frederike Diersen
1-12-2010**

Presentation outline

- National EHR in the Netherlands
- EPSOS
- Questions

Why...?

- Relevant information on the spot at the right time
- Prevention of avoidable errors
- Prevention of recurring examinations due to information-gap
- Safe & reliable exchange of medical data
- Increase perusal & influence from patients
- Improve quality of health care & patient safety

Principles

- Medical data will remain in local systems
- No central database
- National Switch Point with corresponding technical, communication and content standards
- Composition of virtual record by switch point
- No smart card with medical data

Content and access

- Protocols describing access rights in collaboration with professional group
- Content decided in collaboration with professional group
- Start medication information and general physician information
- Existing information

Future steps...

- Development new applications:
 - e-Lab
 - e-Emergency Data Set
 - e-Pathology Record
 - e-Children's Record
 - reference architectures

Access

- Relation of care
- Consent
- Only necessary information
- No obligation to consult the EHR
- No access for research

2,5 million citizens with EHR per 30-09-10

Aantal BSN's cumulatief

EPSOS

- European patients smart open services
- 12 countries
- www.epsos.eu

EPSOS

- Goal: Develop a practical ehealth framework and an infrastructure that will enable secure access to patient health information between different european healthcare systems
- Patient summary and eprescription
- Pilots in 2011

EPSOS Legal challenges

- Starting point is no change in national legislation
- Main challenges:
 - - Consent
 - - Different understanding of privacy regulations
- Resulting in a concept paper and a framework agreement
