

DRAFT OECD COUNCIL RECOMMENDATION ON HEALTH DATA GOVERNANCE

ELETTRA RONCHI

OECD-HARVARD WORKSHOP

6 October 2016

OECD Health Data Governance Recommendation

- » OECD Council Recommendations represent the political will of Member countries –
- » They are not legally binding
 - Expectation that Member countries will do their utmost to fully implement a Recommendation
 - Implementation of Recommendations is regularly monitored
- » They require approval by the responsible Committee/Committees before proceeding to the OECD Council
- » Examples: OECD Privacy Guidelines (OECD Guidelines on the Protection of Privacy and Transborder Flows)

Background

- » 2010: health ministers called for more effective use of collected health data
- » 2011 – 2014: OECD work on improving the Health Information Infrastructure:
 - » Understand the potential, the barriers and the best practices in the use of personal health data to improve health care and research.
 - » Explore the privacy and data security environment
- » 2015 – OECD work on Data-Driven Innovation: Big Data for Growth and Well-Being-
- » 2015- OECD work on Big Data for Advancing Dementia Research

Origins of the Project

Big Data for Advancing Dementia Research

An evaluation of data sharing practices in research on age-related neurodegenerative diseases

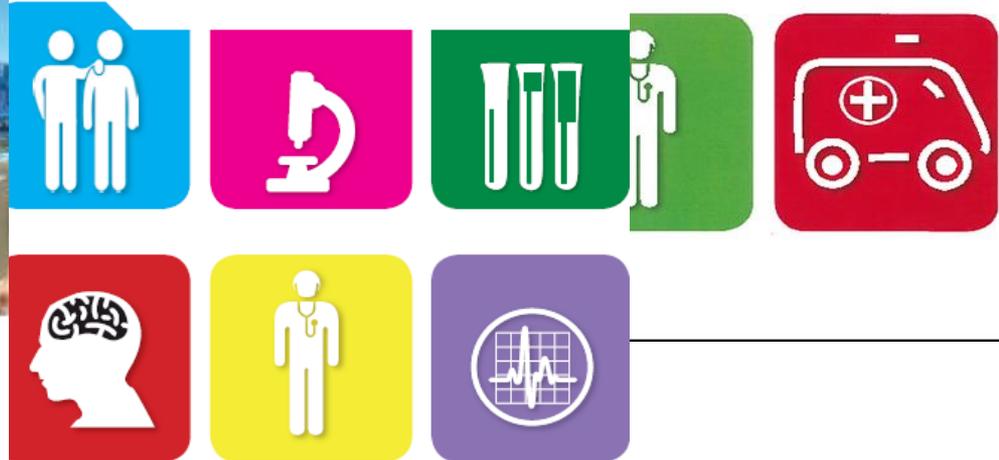

UNIVERSITY OF OXFORD | OECD

March 2015

Data-Driven Innovation
BIG DATA FOR GROWTH AND WELL-BEING

OECD Health Policy Studies
Strengthening Health Information Infrastructure for Health Care Quality Governance
GOOD PRACTICES, NEW OPPORTUNITIES AND DATA PRIVACY PROTECTION CHALLENGES

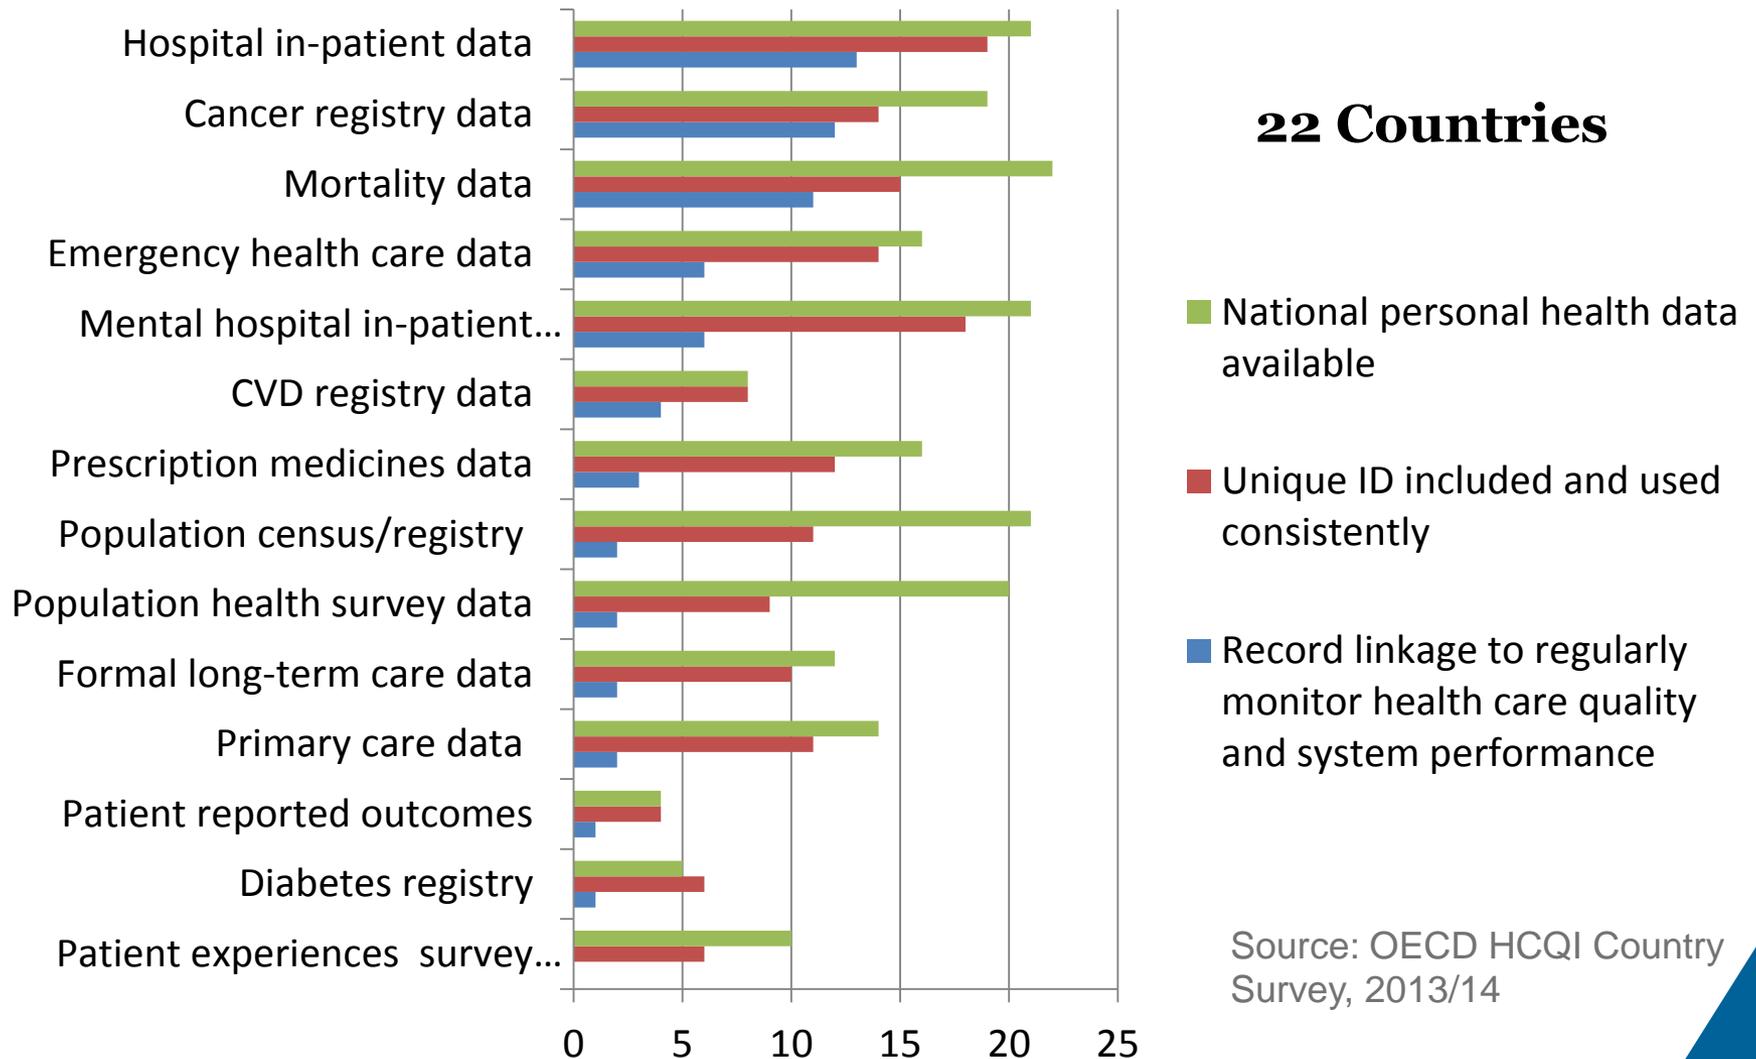

OECD Health Policy Studies
Addressing Dementia
THE OECD RESPONSE

Growing concern in the public health and research community on limitations to data access and sharing

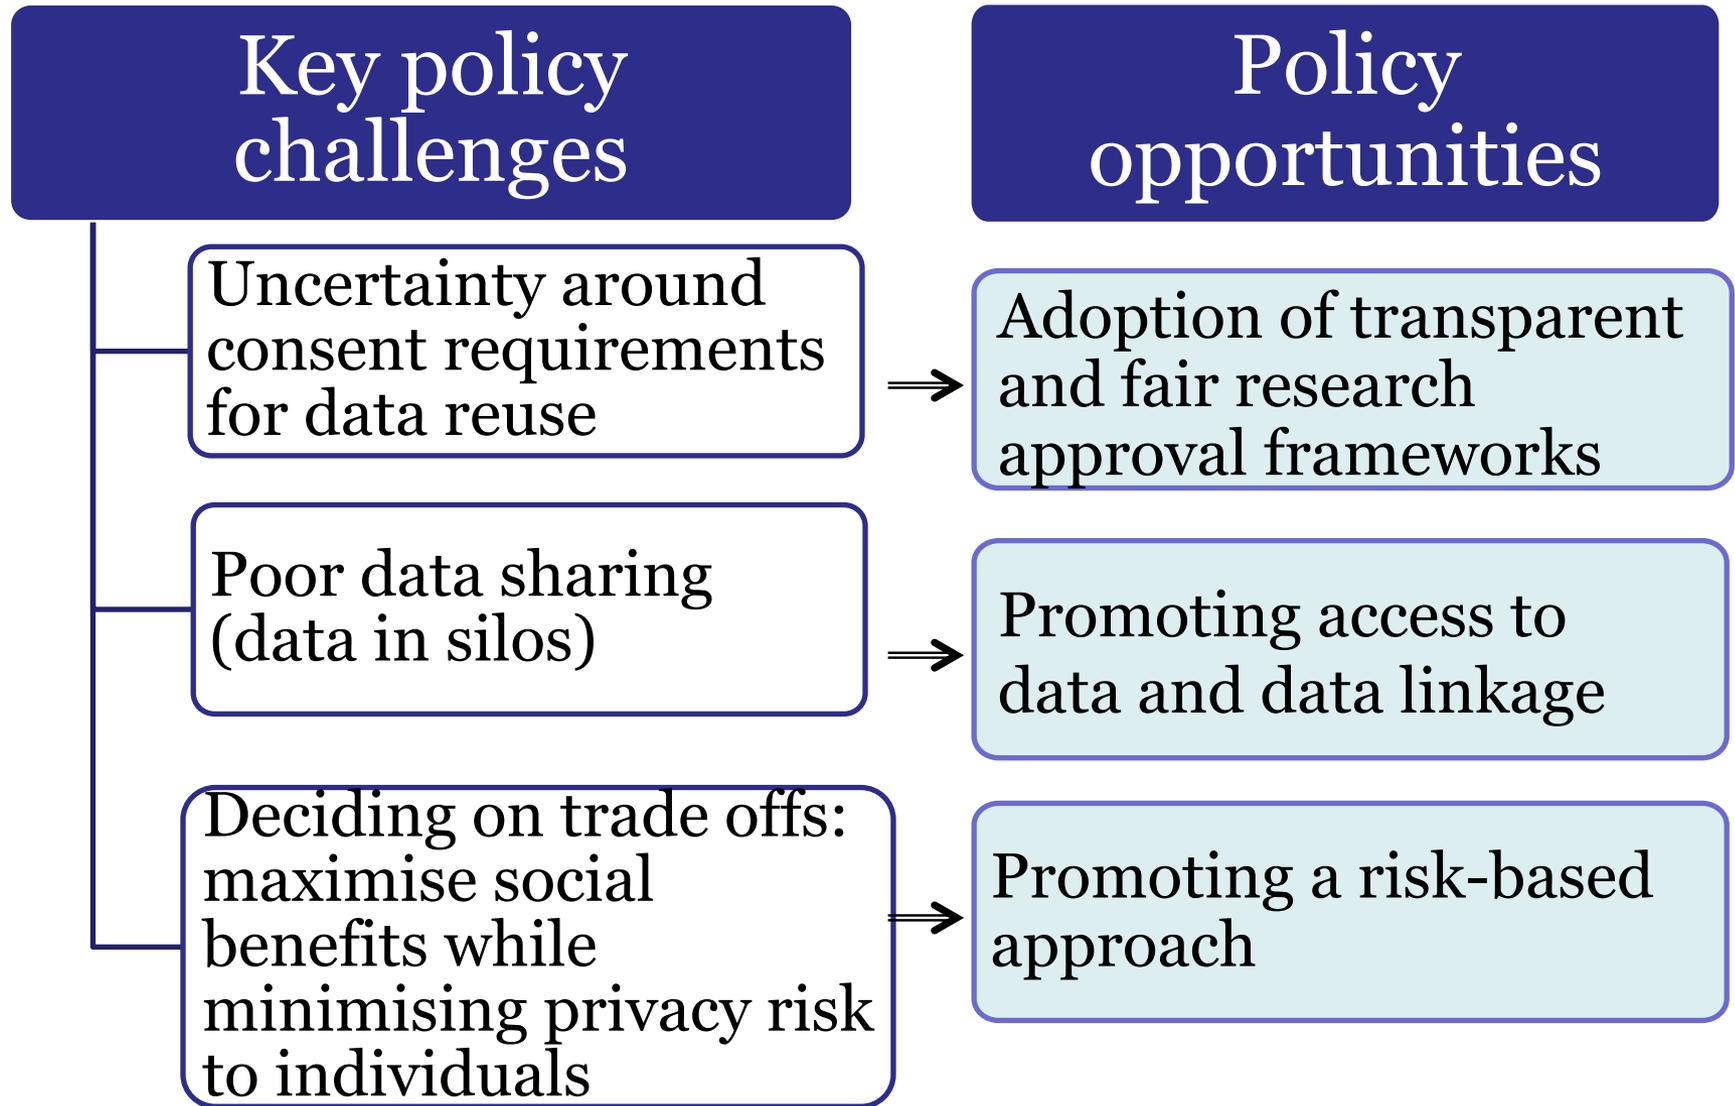

The studies uncovered significant barriers to data linkage and sharing

Key Policy Challenges

Key policy challenges and opportunities

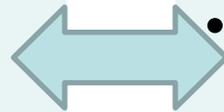

How to reconcile varying interests?

Foster the sharing and use of health data for the broader public interest

- For public health
- To empower consumers through data portability
- To monitor the quality of care
- For greater evidence-based medicine.....

Address legitimate privacy concerns raised by individuals

- Risk of accidental release of identifiable data
- Data re-identification
- Illicit or inadvertent access.....

Bringing privacy protection into the 21st century

We remain hampered by 20th century tools to deal with 21st century privacy problems....

Daniel Therrien (appointed Privacy Commissioner of Canada in 2014)

The OECD Recommendation

Main Challenges

- » Develop a Recommendation that will be applicable in the era of “big data” in health care.
- » Data should serve multiple purposes and be governed in a way that will protect patients’ fundamental rights. For example:
 - Scope must be relevant today and as new data sources emerge in the future
 - Wording to encompass the possibility of exemptions to patient consent requirements subject to suitable safeguards
 - Describing data de-identification and digital security risk management processes in a way that will be relevant in the future as new technologies emerge

Scope of the Recommendation

- » Focus on areas where there is widely recognized, obvious and substantial public interest in health research, health care and health system improvements
- » Acknowledge the continuum of health data use
- » Adopt a broad definition of health data
- » Build on the OECD Privacy Guidelines and other relevant frameworks
- » The Health Committee study is a key input to the drafting of the recommendation

Scope of the Recommendation

The draft Recommendation:

- ✓ recognises that personal health data is processed by a broad spectrum of actors, including but not limited to national and sub national levels of governments, profit (or not) government organisations, health and social care providers and universities
- ✓ encourages the availability and use of personal health information to improve health care quality and performance
- ✓ promotes the use of personal health data for public policy objectives, while maintaining public trust and confidence that any risks to privacy and security are minimized and appropriately managed

Structure of the Draft Recommendation

Cover Note – rationale, scope and process

Preamble

“Having regard” paragraphs, and “Agrees” paragraphs containing explanatory text on main terms used and of scope (*the public interest*)

Operative clauses

Recommendation outlining 12 measures to establish and implement a national health data governance framework including a recommendation on how governments can support interoperable trans border sharing of personal health data

Key principles

Engagement and participation

Coordination and cooperation

Capacity of public sector health data systems

Clear provision of information

Effective consent and choice mechanisms

Controls and safeguards

Approval procedures for the use of personal health data

Public disclosure and transparency

Recognition of the role of technology

Monitoring and evaluation mechanisms

Training and skills development in privacy and security

Certification or accreditation

Governance: Advisory Expert Group (AEG) and Drafting Group

- » AEG includes 65 members with expertise in privacy, law, statistics, research, IT and health policy from government, industry, academia and civil society
- » Drafting Group : Mark Taylor, (Senior Lecturer, *University of Sheffield , UK*) ; David Smith, (former *Assistant Privacy Commissioner of the , UK*) ; Bartha Knoppers, (*Director of the Centre of Genomics and Policy, McGill University ,Canada*) ; Jillian Oderkirk (Consultant OECD); Elettra Ronchi (OECD Senior Policy Analyst) ; Celine Folsche (OECD Legal Advisor) Claire Hilton (OECD).
- » Co chaired by Jennifer Stoddart (former Privacy Commissioner of Canada) and Paivi Hamalainen (Chief Specialist- National Institute for Health and Welfare , Finland)

Eight Key Data Governance Mechanisms

- #1 Coordinated development of high-value, privacy protective health information systems
- #2 Legislative framework permits privacy-protective data use
- #3 Open and transparent information system that builds trust
- #4 Accreditation/certification of data processors to promote data security and access
- #5 Transparent and fair project approval processes
- #6 Data de-identification practices that consider “the big picture” – data protection, security and utility
- #7 Data security practices that meet legal requirements and public expectations
- #8 Data governance practices that are continuously assessed and renewed
