

Managing Security Risk for the Internet Economy

Join the consultation of experts

Businesses in all sectors rely on Information Technologies and the Internet.

As a result they face new forms of security risk to their activities.

The 2002 **OECD Security Guidelines** provide a policy framework for governments and businesses to manage such risks through consistent approaches across countries.

The Guidelines are being reviewed to keep them consistent with today's dynamic risk environment.

The OECD is seeking input to ensure its Security Guidelines reflect the views of all stakeholders in the Internet economy.

We are looking for policy experts from **all sectors** who are responsible for managing **business** security risk.

Join the multi-stakeholder consultation of experts.
