Design of R&D tax relief provisions

Norway provides R&D tax relief through a volume-based R&D tax credit. Since 2020, the headline credit rate has been uniformed to 19%.

### Table 1. Main design features of R&D tax incentives in Norway, 2021

<table>

<tr>
<td><strong>Ceiling</strong></td>
<td>NOK* 25m (in-house R&amp;D** and purchased R&amp;D)</td>
</tr>
</tbody>
</table>

* 1 NOK = 0.0968 EUR, Q3 2021 **: inclusive of R&D procured from third parties in the context of the R&D project.

Note: For more details, see [OECD R&D Tax Incentive Compendium](http://oe.cd/rdtax) and [Eligibility of current and capital expenditure for R&D tax relief](http://oe.cd/rdtax).

Key features:
- In the case of insufficient tax liability, firms receive a refund of unused credits in the following year.
- A ceiling of NOK 25 million applies to eligible in-house and purchased R&D.

Generosity of R&D tax support in 2021

Differences in the design of R&D tax incentives drive significant variation in the expected generosity of tax relief per additional unit of R&D investment. In 2021, the marginal tax subsidy rate for profit-making (loss-making) SMEs in Norway is estimated at 0.22 (0.22), above the OECD median of 0.20 (0.18). The tax subsidy rate for large enterprises is equal to 0.22 (0.22) in the profit (loss)-making scenario, well above the OECD median of 0.17 (0.15).

**Figure 1. Implied tax subsidy rates on R&D expenditures: Norway, 2021**

1-B-Index, by firm size and profit scenario

Note: Implied marginal tax subsidy rates, presented for different firm size and profitability scenarios, are calculated based on headline tax credit/allowance rates (see [methodology](http://oe.cd/rdtax) and [country-specific notes](http://oe.cd/rdtax)), providing an upper bound value of the generosity of R&D tax support, not reflecting the effect of thresholds and ceilings that may limit the amount of qualifying R&D expenditure or value of tax relief.

Recent developments in R&D tax relief provisions

Regular reforms of R&D tax incentives lead to continuous changes in the availability, scope and generosity of R&D tax incentives. Such reforms relate to the launch of new tax incentives, the R&D definition adopted for tax purposes, changes in tax credit and allowance rates, adjustments of thresholds or upper ceilings on qualifying R&D expenditure or tax relief amounts, or changes in the terms and availability of refunds.

In 2021, Norway did not undertake any change in its R&D tax relief provisions. The latest changes in the design of the SkatteFUNN R&D tax credit occurred in 2020:

- A uniform 19% headline tax credit rate was introduced for SMEs (previously 20%) and large firms (previously 18%).
- The hourly rate for internal employees was increased from NOK 600 to NOK 700 per hour. This rate also applies to purchase of R&D services from related companies (units in the same enterprise group).
- The cap on the maximum amount of eligible expenditure for the credit has been reduced from NOK 50 million to NOK 25 million (in-house or outsourced).
- R&D costs were restricted to services from companies within the EEA or those with a tax treaty or information exchange agreement with Norway.
- A mandatory requirement was introduced for signing the time sheets and documentation required for related parties that act as subcontractors of an applying company. Where the applying company acquires R&D services from a related party, the related party would also be required to prepare specific accounts for the project.

None of these policy changes were taken in response to the COVID-19 crisis.

Trends in the generosity of R&D tax support

Since the introduction of a refundable R&D tax credit for SMEs in 2002, the generosity of R&D tax incentives has remained stable in Norway, as measured by the marginal R&D tax subsidy rate for SMEs in the profit and loss-making scenario. In 2003, the tax credit was extended to large companies, leading to a sudden increase in the marginal R&D tax subsidy rate estimated for large (profitable and loss-making) firms in that year.

With only a small difference in the headline tax credit rates for SMEs (20%) and large companies (18%) over the 2003-2019 period and the introduction of a unified tax credit rate of 19% for SMEs and large firms in 2020, marginal R&D tax subsidy rates display limited variation by firm size and over the 2003-2021 time period.

Norway doubled its ceiling on eligible R&D expenditure in 2014 and continued to raise it from 2015 to 2017. Headline tax credit rates do not capture these changes in R&D expenditure ceilings. If this ceiling is considered in the modelling of tax subsidy rates in 2021, the rate estimated for large firms drops from 0.22 (0.22) to 0.04 (0.04) in the profit (loss) case, and the one for profitable (loss-making) SMEs from 0.22 (0.22) to 0.16 (0.16).

Figure 2. Implied tax subsidy rates on R&D expenditures: Norway, 2000-21

1-B-Index, by firm size and profit scenario

Note: Implied marginal tax subsidy rates, presented for different firm size and profitability scenarios, are calculated based on headline tax credit/allowance rates (see methodology and country-specific notes), providing an upper bound value of the generosity of R&D tax support, not reflecting the effect of thresholds and ceilings that may limit the amount of qualifying R&D expenditure or value of tax relief.

Policy support for business R&D: the policy mix

In 2019, Norway is placed above the OECD average in terms of total government support to business R&D as a percentage of GDP, at a rate equivalent to approximately 0.23% of GDP.

Figure 3. Direct government funding of business R&D and tax incentives for R&D, 2019 (nearest year)

As a percentage of GDP

Note: Data on subnational tax support are only available for a group of countries.

Key points:
- From 2006 to 2019, government support for BERD as a percentage of GDP increased in Norway by 0.12 percentage point (pp), while the OECD average increased by 0.05 pp.
- During this period, business R&D intensity in Norway increased from 0.78% to 1.14%.
- In 2019, R&D tax incentives accounted for 50% of total government support for BERD in Norway.

Distribution of R&D tax relief recipients and government tax relief for R&D

The distribution of R&D tax relief recipients and government tax relief for R&D expenditures (GTARD) provide insights into what types of firms claim and benefit from tax relief.

Figure 4. Number of R&D tax relief recipients and value of government tax relief for R&D, 2019

By firm size*, share in percent
By industry**, share in percent

Note: Figures refer to the R&D tax credit (SKATTEFUNN). *SMEs are defined as firms with 1-49 employees. **Economic activity is classified based on SIC2007 (Manufacturing: 10-33; Services: 45-96; Other Sectors: remaining classes).

Key points:
- In Norway, SMEs accounted for 81% of R&D tax relief recipients in 2019, while the share of R&D tax support accounted for by SMEs amounted to 70% in this year. 30% of R&D tax benefits were allocated to large firms, comprising 19% of the population of R&D tax relief recipients in 2019.
- In 2019, firms in services represented 74% of R&D tax relief recipients in Norway, followed by firms in manufacturing with a share of 21%. The share of R&D tax benefits accounted for by the latter amounted to 22% in that year, while this share amounted to 72% in the case of firms in services.
Trends in the uptake of R&D tax incentives

Following the introduction of the SKATTEFUN tax credit for SMEs in 2002 and its extension to large firms in 2003, the number of R&D tax relief recipients in Norway first increased significantly, from around 1750 recipients in 2002 to 3500 in 2004, then plateaued at a lower level (around 2500 recipients) from 2006 to 2013 and rose thereafter to reach around 4 450 in 2017, dropping to around 4 110 in 2019. The changes in the number of R&D tax relief recipients throughout the 2002-19 period are primarily driven by SMEs which accounted on average for more than 80% of R&D tax relief recipients in Norway over these years.

Figure 5. Number of R&D tax relief recipients, Norway, 2002-2019

Note: Figures refer to the R&D tax credit (SKATTEFUN).

Trends in government support for business R&D

Since the introduction of an R&D tax credit in 2002, the importance of tax support has increased in Norway, both in absolute and relative terms.

Figure 6. Direct funding of business R&D and tax incentives for R&D, Norway, 2000-19

As a percentage of GDP, 2015 prices (right-hand scale)

- The cost of government tax support for R&D rose sharply in 2003 after the scheme was extended to large firms, and in 2014, when the ceiling on total eligible R&D expenditure doubled. This trend continued as this ceiling was further raised in 2015, 2016 and 2017. In 2019, R&D tax relief amounted to NOK 3.7 billion (in 2015 prices).
- As percentage of GDP, tax support increased from 0.04% in 2002 to 0.12% of GDP in 2019.
- Direct funding of BERD increased from 0.08% to 0.11% of GDP between 2002 and 2019.
- The share of R&D tax incentives in total government support fluctuated over this period, amounting to 36% in 2002, 53% in 2005 and 34% in 2008 and rising thereafter to reach 50% in 2019.
