

Estonia

Estonia's greenhouse gas (GHG) emissions mainly consist in CO₂ emissions from energy use (78%). In 2021, these emissions are priced through fuel excise taxes, carbon taxes and the European Union Emissions Trading System (EU ETS). Estonia priced about 96% of its carbon emissions from energy use and almost 29% were priced at an ECR above EUR 60 per tonne of CO₂ (see Figure 3). Emissions priced at this level mainly originated from the road transport and industry sectors. The majority of unpriced emissions from energy use were from the industry sector (Figure 2). The EU ETS covered about 1.4% of other GHG emissions¹, which made up about 22% of national emissions (see Figure 1).
