Taxing Wages - Turkey

Tax on labour income

The tax wedge is a measure of the tax on labour income, which includes the tax paid by both the employee and the employer.

**TAX WEDGE ON LABOUR INCOME**

\[
\text{Tax wedge} = \frac{\text{Personal income tax} + \text{employee and employer social security contributions (SSCs)}}{\text{Total labour costs (gross wages + employer SSCs)}} - \text{Family Benefits}
\]

Single worker

The tax wedge for the average single worker in Turkey decreased by 0.1 percentage points from 39.2 in 2018 to 39.1 in 2019. The OECD average tax wedge in 2019 was 36.0 (2018, 36.1). In 2019 Turkey had the 16th highest tax wedge among the 36 OECD member countries, compared with the 17th in 2018.

In Turkey, income tax and employer social security contributions combine to account for 67% of the total tax wedge, compared with 76% of the total OECD average tax wedge.

Average tax wedge: One-earner married couple at average earnings, 2 children

The tax wedge for a worker with children may be lower than for a worker on the same income without children, since most OECD countries provide benefits to families with children through cash transfers and preferential tax provisions.

Turkey had the 4th highest tax wedge in the OECD for an average married worker with two children at 37.5% in 2019, which compares with the OECD average of 26.4%. The country occupied the 6th highest position in 2018.

Child related benefits and tax provisions tend to reduce the tax wedge for workers with children compared with the average single worker. In Turkey in 2019, this reduction (1.7 percentage points) was less than the OECD average (9.6 percentage points).
Tax wedge trends between 2000 and 2019

In Turkey, the tax wedge for the average single worker decreased by 1.3 percentage points from 40.4% to 39.1% between 2000 and 2019. During the same period, the average tax wedge across the OECD decreased by 1.4 percentage points from 37.4% to 36.0%.

Since 2009, the tax wedge for the average single worker increased by 2.4 percentage points in Turkey. During this same period, the tax wedge for the average single worker across the OECD increased by 0.5 percentage points.

Average tax wedge over time for a single worker

Employee tax on labour income

The employee net average tax rate is a measure of the net tax on labour income paid directly by the employee.

**EMPLOYEE NET AVERAGE TAX RATE**

\[
\text{Employee personal income tax and employee social security contributions) \times Family \ Benefits} \quad \text{Gross wages}
\]

In Turkey, the average single worker faced a net average tax rate of 28.5% in 2019, compared with the OECD average of 25.9%. In other words, in Turkey the take-home pay of an average single worker, after tax and benefits, was 71.5% of their gross wage, compared with the OECD average of 74.1%.

Taking into account child related benefits and tax provisions, the employee net average tax rate for an average married worker with two children in Turkey was reduced to 26.5% in 2019, which is the 2nd highest in the OECD, and compares with 14.6% for the OECD average. This means that an average married worker with two children in Turkey had a take-home pay, after tax and family benefits, of 73.5% of their gross wage compared to 85.4% for the OECD average.
