Key findings

- The 2022 STRI of China is higher than the OECD average and slightly higher than the STRI sample average, but it has been decreasing progressively over the past years due to regulatory reforms across different services sectors.
- Rail freight transport services have the lowest score relative to the average STRI across all countries, indicating the most open sector for trade. Postal and courier services have the highest score relative to the average STRI across all countries.
- Despite progress on trade liberalisation efforts, market access to certain key services sectors remains prohibited for foreigners or subjected to stringent conditions.

Recommendation

- Open and well-regulated services markets are essential to facilitate economic recovery, strengthen resilience to future shocks, and promote a more sustainable trading system. To ensure that the benefits of open markets and a rules-based international trading system are preserved, policy makers should focus on minimising barriers that increase trade costs for services providers, weaken the gains from digital transformation and undermine competitiveness.
The 2022 STRI of China is higher than the OECD average and slightly higher than the STRI sample average (Figure 1).

**Figure 1. Average STRI across countries, 2022**

Note: The STRI indices take values between zero and one, one being the most restrictive. The STRI database records measures on a Most Favoured Nation basis. Air transport and road freight cover only commercial establishment (with accompanying movement of people). The indices are based on laws and regulations in force on 31 October 2022. The STRI regulatory database covers the 38 OECD Members, Brazil, China, India, Indonesia, Kazakhstan, Malaysia, Peru, Russia, Singapore, South Africa, Thailand and Viet Nam. The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

The STRI outcomes reflect restrictions that apply to key strategic services sectors such as postal and courier services, air transport services, parts of legal services, parts of telecommunications services, or some audio-visual services. Trade and investments in these sectors are prohibited or subject to stringent entry conditions under the Special Administrative Measures for the Access of Foreign Investment (Negative List).

Moreover, stringent economy-wide regulations include labour market tests for intra-corporate transferees, contractual services suppliers or independent services suppliers, and increased hurdles on digital trade, including through the requirement to store locally any personal information and important data collected or generated in China.

China has also been progressively introducing reforms over the past years, contributing to easing the conditions for trade and investment in several sectors (Figure 2). Highest levels of liberalisation were recorded in some of the transport sectors, parts of the logistics sectors, and financial services.
Figure 2. Evolution of STRI indices by sector in China
Services Trade Restrictiveness Index, percentage change over the period 2014-2018, 2018-2021 and 2021-2022

Rail freight transport, architecture services, engineering services and distribution services are the sectors with the lowest score relative to the average STRI across all countries (Figure 3). Sound recording, motion pictures, telecommunications and courier services (covering also postal services) are the sectors with the highest score relative to the average STRI across all countries.

Figure 3. Sectoral breakdown - The least and most restricted sectors in China

Note: Selection was made based on how far the sectors’ score were from the world average score, as a percentage difference i.e. (STRI_{country, sector} - STRI_{world average, sector}) / STRI_{world average, sector}

Rail freight transport services are the least restricted in China relative to the sample average. The composition of the scores indicates that barriers to foreign entry have had an impact compared to other countries. Rail freight transport services are not mentioned on the Negative List and subject mostly to economy-wide measures. Courier services are the most restricted services sector in China relative to the sample average. Restrictions on foreign entry and barriers to competition contribute most to the
scores. China maintains a monopoly on delivery of letters and prohibits foreign participation in domestic express delivery services of letters. Foreign investment in express delivery of parcels is permitted. Courier services are still on the Negative List and investments are subject to approval by the Ministry of Commerce or other relevant authorities (Figure 4).

**Recent policy changes**

On 7 July 2022, China released new Measures for Security Assessment for Outbound Data Transfer that came into force on 1 September 2022. The Measures provide more clarity on the security assessment of important data and personal information collected and generated during operation within the territory of the People’s Republic of China and transferred abroad by a data handler.

The Special Administrative Measures for Access of Foreign Investment (Negative List) (2021 edition) entered into force in January 2022. Annual revisions of the Negative List since its first introduction in 2017 contributed to progressively lowering the scope of restrictions affecting foreign investments. This also contributed in large part to the reduction of the STRI score for China in the past five years, including through liberalising measures on ownership, establishment and control of foreign businesses in sectors such as financial services, transportation, logistics services, construction services, value-added telecommunications, and professional services.

On 10 June 2021, China adopted a new Data Security Law which covers new rules related to data activities by businesses in China. China’s new Foreign Investment Law came into effect on 1 January 2020, consolidating and replacing several previous laws governing foreign investments. Moreover, it also removed the requirement for foreign investments in services sectors listed on the Negative List to
demonstrate "remarkable economic benefits" to China’s national economy. However, in January 2021, China introduced tighter rules for reviewing foreign investment on grounds of national security.

In response to the COVID-19 pandemic, China restricted the entry of foreigners into the country starting in March 2020. Easing of entry requirements have been put in place after November 2022, including for business travel.
