OECD Services Trade Restrictiveness Index (STRI): Hungary 2019

Hungary exported services worth USD 29 billion (0.5% of world services exports) and its services import value was USD 21 billion (0.5% of world services imports) in 2018. Transport services are Hungary’s largest services export category while other business services attract the largest imports in the economy. Hungary’s score on the STRI in 21 sectors is shown below, along with the average and the lowest score among the 46 countries included in the STRI database for each sector. Hungary has a lower score on the STRI than the average in 12 out of the 21 sectors.

STRI by sector and policy area (2019)

Note: The STRI indices take values between zero and one, one being the most restrictive. They are calculated on the basis of the STRI regulatory database which contains information on regulation for the 36 OECD Members, Brazil, China, Colombia, Costa Rica, India, Indonesia, Malaysia, Russia, South Africa, and Thailand. The STRI database records measures on a Most Favoured Nations basis. Preferential trade agreements are not taken into account. Air transport and road freight cover only commercial establishment (with accompanying movement of people). Maritime transport services are not covered for landlocked countries. The indices are based on laws and regulations in force on 31 October 2019.

Horizontal policy measures

The indices can be explained in large part by general regulations that apply to all sectors in the economy. The number of work permits issued to non-EU nationals seeking to provide services on a temporary basis as intra-corporate transferees, contractual services suppliers or independent services suppliers is subject to quotas and labour market testing. Rights of access to public procurement are limited to regional trade agreement partners and members of the WTO’s Government Procurement Agreement. The standards for cross-border transfer of personal data are set at the EU level. Transfers to non-EEA economies can take place when these ensure an adequate level of data protection or, in the absence of this, appropriate safeguards (e.g., binding corporate rules or standard data protection clauses) are in place. Finally, a minimum amount of capital must be deposited in a bank or with a notary in order to register a corporation.
The sectors with the relatively lowest STRI scores
Courier services, accounting services, and rail freight transport are the three sectors with the lowest score relative to the average STRI across all countries. In courier services, there are few sector-specific limitations. The Hungarian state maintains control of the designated postal operator which is exempt from tax obligations until 2020. Accounting services cover also auditing, both of which are regulated professions in Hungary. While the regulatory environment is more open than in many other countries, non-EU accountants and auditors remain subject to local examinations and practice requirements before qualifying for a license. A temporary licensing regime is not available either. In the rail freight transport sector, the sector is relatively open although the main railway operator is state-owned and certain types of railway agreements are exempt from competition law.

The sectors with the relatively highest STRI scores
Legal services, computer services and sound recording services are the three sectors with the highest score relative to the average STRI across all countries. In legal services only licensed lawyers may own, manage or sit on the board of law firms. To obtain a license to practice, EU or EEA nationality is required. Foreign lawyers are limited to providing legal advice on foreign and international law through associations with a local attorney or law firm, and cannot establish a law firm. In computer services, Hungary’s horizontal policy measures contribute to the relatively high score. In sound recording services, in addition to horizontal regulations, quotas establish the minimum share of Hungarian music to be broadcasted in local radios.

Recent policy changes
In January 2019, the Law on the Control of the Foreign Investments Offending the National Security of Hungary entered into force that requires foreign investments in certain activities, including services related to electronic communications and some financial services, to be notified to the relevant authorities and receive their confirmation. The new EU General Data Protection Regulation (Regulation 2016/679) entered into force on 25 May 2018 providing a comprehensive update on the EU data protection regime. As of 2016, intra-corporate transferees from third countries can stay in Hungary up to 12 months on their initial permits. Also since 2016, revised conditions, including on economic needs, apply for authorisations for the operation of storage facilities for the customs warehousing of goods pursuant to Regulation (EU) No 952/2013.

Efficient services sectors matter
Services account for 27% of gross exports but for 47% in value added terms. This indicates that Hungary’s exports of goods rely intensively on services inputs. Services account for 63% of GDP and 65% of employment, showing that labour productivity is lower in services than in other sectors. The information and communication technology revolution opens new opportunities for inclusive growth in a services economy like Hungary. Innovation and adoption of technology relies on access to knowledge and to the networks, people, goods and services that carry the knowledge around the world. In this context, Hungary could benefit from more open markets for services trade.
