OECD Services Trade Restrictiveness Index (STRI): India 2019

India exported services worth USD 205 billion (3.5% of world services exports) and its services imports amounted to USD 124 billion (2.2% of world services imports) in 2018. The largest services exports categories are other business and computer services and the largest import categories are transport and other commercial services. India’s score on the STRI index in the 22 sectors is presented below along with the average and the lowest score among the 46 countries included in the STRI database for each sector. India has a STRI score above average in all sectors.

STRI by sector and policy area (2019)

Note: The STRI indices take values between zero and one, one being the most restrictive. They are calculated on the basis of the STRI regulatory database which contains information on regulation for the 36 OECD Members, Brazil, China, Colombia, Costa Rica, India, Indonesia, Malaysia, Russia, South Africa, and Thailand. The STRI database records measures on a Most Favoured Nations basis. Preferential trade agreements are not taken into account. Air transport and road freight cover only commercial establishment (with accompanying movement of people). The indices are based on laws and regulations in force on 31 October 2019.

Horizontal policy measures
Services trade through FDI is governed by the “Consolidated FDI Policy” (the current version in force since 28 August 2017). Sectors are categorised into two groups: prohibited sectors and permitted sectors. In the permitted sectors investment can take place either through the government route through which prior approval is needed, or the automatic route where no approval is required. In some sectors the automatic route applies up to a certain threshold beyond which approval is needed. Additional horizontal measures affecting all sectors are regulations on transfers of shares between residents and non-residents, which are subject to pricing guidelines, and regulations on mergers and acquisitions, which usually take place through the establishment of a holding company in India. India applies labour market tests for natural persons seeking to provide services in the country on a temporary basis as intra-corporate transferees, contractual services suppliers or independent services suppliers. These categories may stay in the country for up to 24 months on their first entry permit. However, multiple entry business visas are awarded for up to five years with each stay limited to six months. At
least one of the board members and the manager in corporations must be residents of India. Finally, there are preferences for local suppliers in public procurement.

**The sectors with the relatively lowest STRI scores**
Engineering services, sound recording, and logistics customs brokerage are the three sectors with the lowest score relative to the STRI across all countries. In all three sectors, however, the scores are still higher than the mean. Engineering is not a regulated profession and the sector is subject to the general policy framework. The sector-specific trade restricting regulations in sound recording is a statutory monopoly on copyrights management. The main restrictions on customs brokerage is a nationality and residency requirement for obtaining a license as a customs broker.

**The sectors with the relatively highest STRI scores**
Rail freight transport, architecture and accounting services, are the three sectors with the highest score relative to the average STRI across all countries. Railway operations are on the list of prohibited sectors and are reserved for Indian Railways, a state-owned enterprise. This together with no significant transit rights for foreign suppliers closes the market for international trade. Nevertheless, 100% foreign equity is permitted through the automatic route for construction, operation and maintenance of railway infrastructure. Architects are a regulated profession and reserved for licensed architects. Only locally licensed architects may own shares, sit on the board or manage architecture firms. Indian nationality is required to obtain a license, but foreign architects may provide services through a temporary license. Accounting and auditing are reserved for licenced accountants and auditors. Only Indian nationals are eligible for obtaining a license and corporations are not allowed in this sector. Accounting and auditing firms or professionals can only access the Indian market through a limited license for a specific project or time period.

**Recent policy changes**
In 2016, foreign equity limits were removed for airport services and cable and satellite broadcasting and foreign equity limits were eased in civil aviation. Minimum capital requirements for establishing a company were eliminated in most sectors in 2016. On the other hand, India introduced an equalization levy of 6% on purchases of advertising services from non-resident companies in 2017. India lifted a number of restrictions on cabotage in maritime transport in 2018.

**Efficient services sectors matter**

Services account for a higher share of GDP than employment, which indicates that labour productivity is higher in services than in other sectors. Services account for more than 44% of gross exports, among the highest of the 46 countries included in the STRI project, and more than 55% of value added exports. The information and communication technology revolution opens new opportunities for inclusive growth in a services economy like India. Innovation and adoption of technology relies on access to knowledge and to the networks, people, goods and services that carry the knowledge around the world. In this context, India could benefit from more open markets for services trade.
