

OECD Services Trade Restrictiveness Index (STRI)

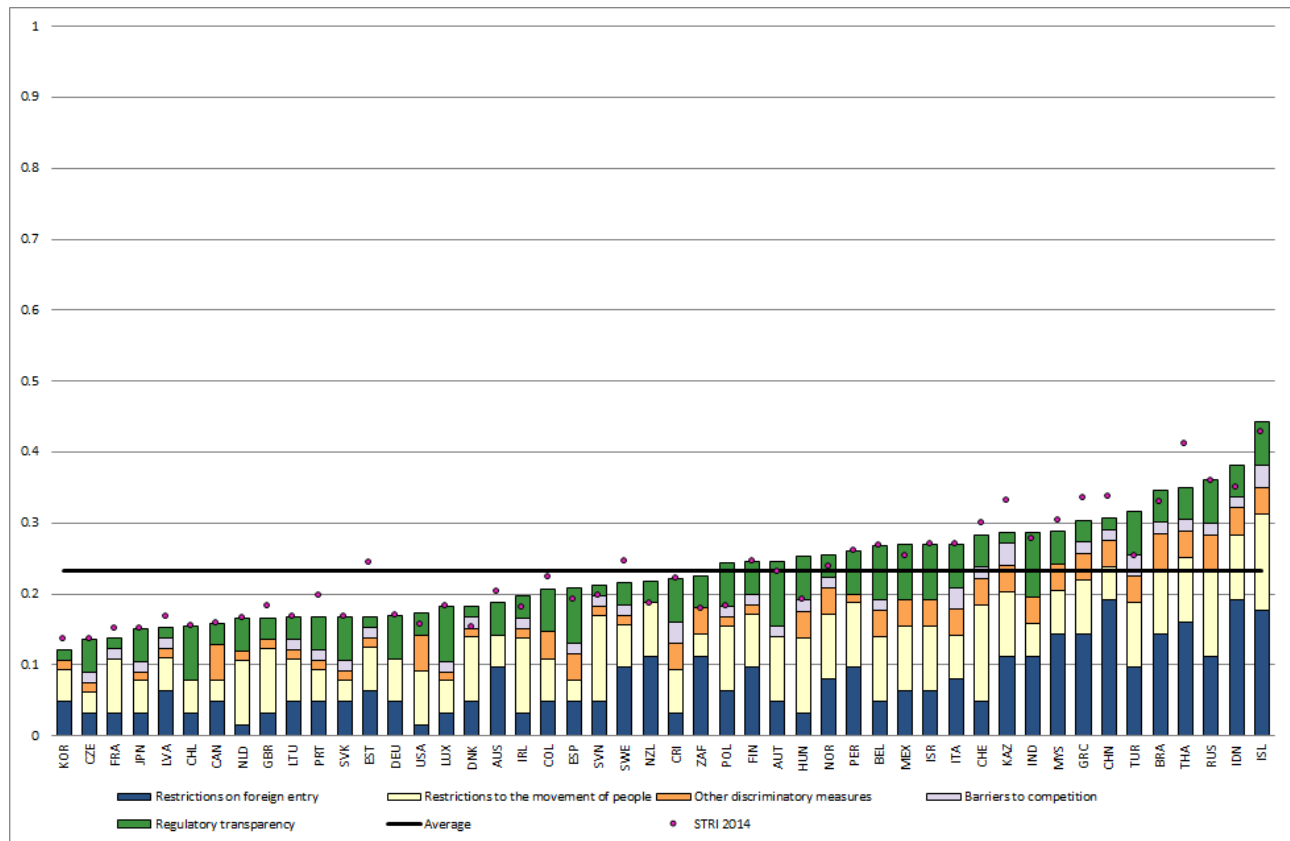

STRI SECTOR BRIEF: COMPUTER SERVICES

2020

This note presents the Services Trade Restrictiveness Indices (STRI) for the 37 OECD countries and Brazil, the People's Republic of China, Costa Rica, India, Kazakhstan, Indonesia, Malaysia, Peru, the Russian Federation, South Africa and Thailand for computer services in 2020.

Computer services are defined as computer programming, consultancy and related activities and information service activities (ISIC 62 and 63). Major exporters are the European Union, India and the United States. Computer services are mainly traded business to business.

STRI by policy area: Computer services (2020)

Note: The STRI indices take values between zero and one, one being the most restrictive. They are calculated on the basis of the STRI regulatory database which records measures on a Most Favoured Nations basis. Preferential trade agreements are not taken into account. The indices are based on laws and regulations in force on 31 October 2020.

The 2020 scores in the computer services sector range between 0.12 and 0.44 with an average of 0.23. There are 25 countries below and 23 countries above the average.

The measures in the STRI database are organised under five policy areas as indicated in the chart. The regulatory profile differs considerably across countries. Only one of the 48 countries has foreign equity restrictions in this

sector, covering parts of the activities classified under computer services, but six countries require that at least half the board of directors must be residents and ten countries require that foreign investors bring net economic benefits to the host country as a condition for investing. Six countries have limitations on cross-border mergers and acquisitions, while three countries control foreign capital flows in some shape or form. Finally, 41 countries have stricter conditions on the transfer of personal data than recommended in the OECD Guidelines for Protection of Privacy and Transborder Flow of Personal Data. These measures are all recorded under the *restrictions on foreign entry* policy area. Computer services can easily be traded across borders through electronic networks. However, cross-border trade needs to be supported by visits to the premises of the customer, both through business travel for technical support and for longer visits to work with clients, for instance on organisational reforms to maximise the benefit of new software.

Restrictions on the movement of people account for one-third of the total scores in computer services. The skilled labour intensity of the sector together with the complementarity between cross-border trade and movement of natural persons explains why restrictions on movement of people feature prominently in the STRI for computer services. In fact, all the countries in the database limit market access for natural persons providing services on a temporary basis as intra-corporate transferees, contractual services suppliers or independent services suppliers. Ten countries impose quotas on one or more of these three categories, 36 countries apply economic needs tests to stays that last longer than 3-6 months and the duration of stay is limited to less than three years in 29 countries.

Other discriminatory measures contain regulation related to taxes, subsidies and public procurement. Three countries report areas where national treatment is not fully granted regarding taxes or subsidies, while 24 countries have preferential measures for local suppliers or limit non-discriminatory access to public procurement to free trade agreement or WTO government procurement agreement (GPA) partners.

Barriers to competition do not appear widespread or particularly pernicious in computer services. Five countries record state owned enterprises among the major services suppliers in the sector, and the most common measure under this policy area is minimum capital requirements found in 27 countries.

The *regulatory transparency* policy area builds on information from administrative laws and regulations, information from the migration authorities on requirements for obtaining a business visa and the World Bank Doing Business Survey. The latter records time, cost and number of procedures required for establishing a company. These measures are benchmarked against a global threshold set at the 40 best performing countries. There are 21 countries included in the STRI database that are not among the 40 best performing countries on one or more of these measures. The score in the regulatory transparency area is largely attributed to this. In addition lengthy, costly and complex regulatory procedures related to obtaining a business visa contribute to the index for 28 countries.

Compared to 2014, denoted by the pink dots in the chart, the STRI index is unchanged for 17 countries, 14 have a lower (less restrictive) score, and 17 record a higher value of the STRI index (more restrictive) in 2020. The country that reduced the STRI index the most was Estonia where the index went down by eight basis points, while Turkey was the country that raised the index the most, adding six basis points. Improvements in administrative procedures under the regulatory transparency area explain a large part of the improvement in the STRI index for the 14 countries with a lower index. In 2020, several countries have introduced new conditions for the screening of foreign investment.
