Inequalities in Dominican Republic

Inequality ratios (distance from parity) for selected indicators of current well-being, 2019 or latest available year

Note: A result closer to the parity line indicates greater equality, a result further from the parity line indicates greater inequality, between the groups being compared. Inequality ratios below 1 indicate worse outcomes (i.e. lower well-being) for the most vulnerable group (i.e. women (gender), children or elderly (age), rural areas (territory), primary educated people (education)). Inequality ratios above 1 indicate better outcomes for the most vulnerable group.
